

Thailand Tone Plan

This chapter details the modifications to the Digital Tone Generator (DTG or DTG-2) and Call Progress Analyzer (CPA) card, and Service Platform (SPC)-CPA service circuits to support the supervision tones specific to the Thailand telephone network.

The information in this chapter supersedes the information in the following manuals:

- *Cisco VCO/4K System Administrator's Guide*
- *Cisco VCO/4K Standard Programming Reference*
- *Cisco VCO/4K Extended Programming Reference*
- *Cisco VCO/4K Supervision and Call Progress Tone Detection*

Tone Characteristics

Table 3-1 summarizes the characteristics of the most frequently used supervision tones in the Thailand network.

Table 3-1 Thailand Digital Tone Generator Supervision Tones

Tone	Frequencies (Hz)	Amplitude (dBm)	Cadence	Detected by CPA?
Dial	400 Modulated at 50 Hz	-10	Continuous	Yes
Ring	400	-10	1 second on, 4 seconds off, REPEATED	Yes
Busy	400	-10	500 milliseconds on, 500 milliseconds off, REPEATED	Yes
Reorder	400	-10	300 milliseconds on, 300 milliseconds off, REPEATED	Yes

Table 3-1 Thailand Digital Tone Generator Supervision Tones (continued)

Tone	Frequencies (Hz)	Amplitude (dBm)	Cadence	Detected by CPA?
Number Unavailable	400	-9	100 milliseconds on, 100 milliseconds off, 100 milliseconds on, 100 milliseconds off, 100 milliseconds on, 100 milliseconds off, 300 milliseconds on, 100 milliseconds off, REPEATED	Yes—as SIT
SIT	950 1400 1800	-13	330 milliseconds on, 330 milliseconds off, 330 milliseconds on, 990 milliseconds off, REPEATED	Yes

Tone Detection

CPA and SPC-CPA processing is modified to support the Thailand network requirements. Use the system administration answer supervision templates function to control tone detection for the tones listed in Table 3-1. Supervision template processing is described in the *Cisco VCO/4K System Administrator's Guide*.

Answer Supervision Template Screen Terminology

The supervision events and tones listed in the Answer Supervision Template screen use standard North American network terminology. Table 3-2 shows the Answer Supervision Template screen terms to use with the Thailand country feature package.

1. Not a tone.

Tone Generation

Tone generation is performed through DTG outpulse and static tone channels. The allocation of these tones is controlled via inpulse rules, Voice Path Control (\$66) commands, and DTMF Collection Control (\$67) commands.

Table 3-3 supersedes the tone generation table listed in the *Cisco VCO/4K Programming Reference* and the *Cisco VCO/4K Extended Programming Reference*. It also supersedes the tone output level specifications found in the *Cisco VCO/4K Card Technical Descriptions*. For more information on generating tones, refer to the *Cisco VCO/4K System Administrator's Guide*.

The tones and their corresponding output levels, decimal values, hexadecimal values, and port addresses are summarized in Table 3-3.
