

Release Notes for Cisco Application-Oriented Networking Version 2.1.2

July 14, 2006

Cisco Application-Oriented Networking (AON) is the first in a new line of Cisco products that embed intelligence into the network to meet the needs of application deployment. AON enables you to:

- Integrate dissimilar applications by routing information to the appropriate destination, in the format required at the destination.
- Enforce policies for information access and exchange.
- Optimize bandwidth and reduce processing overhead for application traffic.
- · Increase management of information flow, including monitoring for business and infrastructure.
- Enhance business continuity by transparently backing up or rerouting critical business data.

Working at the message rather than packet level, AON provides this support by understanding more about the content and context of information flow.

These release notes cover Cisco Application-Oriented Networking Version 2.1.2 and include the following topics:

- AON Application Requirements, page 2
- AON Supported Hardware, page 2
- AON Node Supported Software, page 3
- Important Notes, page 3
- Resolved Caveats, page 5
- Open Caveats, page 5
- Upgrade Instructions, page 6
- Backward Compatibility, page 6
- Related Documentation, page 6
- Obtaining Documentation, page 6
- Documentation Feedback, page 8
- Cisco Product Security Overview, page 8

• Obtaining Technical Assistance, page 9

AON Application Requirements

Table 1 lists the minimum requirements for installing AON applications.

Table 1 AON Minimum System Requirements

Application	Operating System	CPU	RAM	Hard Drive
AON Management Console (AMC)	Red Hat Enterprise Linux 3.0 or later	Single processor; Pentium III or Xeon	1 GB	20 GB
AON Development Studio (ADS)	Windows 2000 or Windows XP with latest service packs.	Pentium IV	1 GB (required) 2 GB (recommended for large adapters)	40 GB

AON Supported Hardware

The Cisco Application-Oriented Networking Version 2.1.2 introduces the upgraded Cisco 8342 AON Appliance hardware. This platform is ROHS (Restriction on Hazardous Substances) compliant.

ROHS is an European regulation that mandates that starting July 1, 2006, any equipment entering Europe must not contain certain hazardous material, for example, cadmium.

Table 2 lists the hardware platforms that are supported by AON version 2.1.2.

Table 2 Supported Hardware

AON Appliance	AON Service Module (AON-SM)	AON Network Module (AON-NM)
Cisco 8340 AON Appliance	• WS-6503	Cisco 2610XM
• APL-AON-8340-K9	• WS-C6503-E	Cisco 2611XM
Cisco 8342 AON Appliance	• WS-C6506	Cisco 2620XM
• APL-AON-8342-K9	• WS-6506-E	Cisco 2650XM
	• WS-C6509	Cisco 2651XM
	• WS-6509-E	Cisco 2691XM
	• WS-C6509-NEB-A	• Cisco 2811
	• WS-6513	• Cisco 2821
		• Cisco 2851
		• Cisco 3725
		• Cisco 3745
		• Cisco 3825
		• Cisco 3845

AON Appliance Supported Software

Table 3 Supported Software on Appliance

Platform	Minimum Software Release Supported	Latest Software Release Supported
Cisco 8340 AON Appliance	AON version 1.1.0.189 AON version 2.1.2.29 (with firmware	AON version 2.1.2.29
	upgrade)	
Cisco 8342 AON Appliance	AON version 2.1.2.29	_

AON Node Supported Software

Table 4 lists the software levels for the Cisco platforms that support AON.

Table 4 Supported Software

Platform	Minimum Software Release Supported	Latest Software Release Supported
Native	Cisco IOS Release 12.2(18)SXE1	Cisco IOS Release 12.2(18)SXF2
Catalyst 6500 Series Switches with Supervisor Engine 720		
Hybrid	Cisco IOS Release 12.2(18)SXF	CatOS Release 8.5(3)
Catalyst 6500 Series Switches with Supervisor Engine 720	CatOS Release 8.5(3)	Cisco IOS Release 12.2(18)SXF
Native	Cisco IOS Release 12.2(18)SXF2	Cisco IOS Release 12.2(18)SXF2
Catalyst 6500 Series Switches with Supervisor Engine 2		
Hybrid	CatOS Release 8.4(2a)	CatOS Release 8.5(3)
Catalyst 6500 Series Switches with Supervisor Engine 2	Cisco IOS Release 12.1(23)E3	Cisco IOS Release 12.2(18)SXF2
Cisco 2600, Cisco 2800, Cisco 3700, and Cisco 3800 Series Routers	Cisco IOS Release 12.3(14)T1	Cisco IOS Release 12.4(3)

Important Notes

- The AON Management Console (AMC) supports only Microsoft Internet Explorer 6. AMC pages may not render properly in other Web browsers.
- AON is implemented in Java where memory is automatically managed by the Java runtime system.
 This means that there might be moments in the system where the garbage collection (automatic
 memory management) is still working at freeing up memory. The graceful handling mechanism
 checks the free memory to determine if a message should be let into the system. So under high loads
 it is possible that AON will reject messages because the garbage collection is taking time to free up
 memory.

- The following issues may affect AON Development Studio installation, however, the root causes are beyond the control of Cisco:
 - Using the ALT key during ADS installation can cause some InstallShield screens to become corrupted. Despite this display problem, the ADS installer continues to function. If the display gets corrupted, minimize the ADS installer and then maximize it again. The display should return to normal. This is a known InstallShield issue when using JVMs with version 1.4.2.x.
 - In rare situations when initially launching ADS on Windows 2000, an error message may be returned indicating the database is busy or unavailable. The error can occur even though the database is listed as started in the list of Windows Services. This occurs when a database port is chosen in the ADS installer that also appears in the output of the **netstat -a** command in a loopback situation. The port is shown pointing to another server port which in turn points back to it. This behavior has only been seen with one port, though not always the same port on the system. Reboot the PC to correct this problem.

Resolved Caveats

Table 5 lists the caveats that have been resolved in this AON release.

Table 5 Resolved Caveats for Cisco Application-Oriented Networking Version 2.1.2

Defect ID	Description
CSCse60390	When ADS fails to login, user password is logged in the clear in AMC log (amc.log).
CSCse60415	ADS cannot handle more than a 32 character host name when connecting.

Open Caveats

Table 6 lists the caveat for this AON release. This caveat is in addition to the open caveats listed in the Release Notes for Cisco Application-Oriented Networking Version 2.1 and Release Notes for Cisco Application-Oriented Networking Version 2.1.1.

Table 6 Open Caveats for Cisco Application-Oriented Networking Version 2.1.2

Defect ID	Description	
CSCse76913	Symptom	
	On a CDP neighbor Cisco device, when the show cdp neighbors detail command is running, the Version field value is missing and appears as the following in the output:	
	Version: , Version , Version	
	Condition	
	• Running an AON 8300 Series appliance (APL-AON-8340-K9 or APL-AON-8342-K9) with AON 2.1, AON 2.1.1 or AON 2.1.2 release.	
	Retrieving the AON software version from a neighboring network device or network management application	
	Note Running the show cdp neighbors detail command on the AON appliance to retrieve neighboring device version operates correctly and is unaffected by this problem.	
	Workaround	
	Get the AON version information:	
	1. Use the show version command to verify that the node is running new software version. The AON software version is the value of the "Global Software Version" field.	
	2. Use AMC to activate the node, then go to Network Node > Manage > Show to confirm that "AON SW Version" field reflects the AON software version.	

To view the open caveats for Cisco Application-Oriented Networking, use Bug Toolkit.

Upgrade Instructions

If you already have a Cisco 8342 AON Appliance hardware, your system does not need any software upgrade; however, if you have a Cisco 8340 AON Appliance hardware, you will need a firmware upgrade and an upgrade to Cisco Application-Oriented Networking Version 2.1.2 software.

For detailed instructions on the firmware upgrade and upgrading to Cisco Application-Oriented Networking Version 2.1.2 software, see the following document:

Upgrading the Cisco Application-Oriented Networking Environment

Backward Compatibility

You must install the latest Cisco AON Management Console (AMC) release and AON Developer Studio (ADS) software on your node. Both these software versions must match for the node to work.

Cisco Application-Oriented Networking Version 2.1.2 will work with any node with Cisco AON Version 2.1 and Cisco AON Version 2.1.1.

Once you upgrade to AON Version 2.1.2, you cannot downgrade AON Appliance to any lower releases.

Related Documentation

The AON documentation set includes the following guides:

- AON Installation and Administration Guide—covers the installation and administration of the AON
 Management Console and AON nodes.
- AON Development Studio User Guide—covers the AON Development Studio, Bladelets, and PEP creation.
- AON Programming Guide—covers the development of custom Bladelets, custom adapters, and other features related to extending AON functionality.
- Release Notes for Cisco Application-Oriented Networking Version 2.1.
- Release Notes for Cisco Application-Oriented Networking Version 2.1.1.

Obtaining Documentation

Cisco documentation and additional literature are available on Cisco.com. Cisco also provides several ways to obtain technical assistance and other technical resources. These sections explain how to obtain technical information from Cisco Systems.

Cisco.com

You can access the most current Cisco documentation at this URL:

http://www.cisco.com/univercd/home/home.htm

You can access the Cisco website at this URL:

http://www.cisco.com

You can access international Cisco websites at this URL:

http://www.cisco.com/public/countries_languages.shtml

Documentation DVD

Cisco documentation and additional literature are available in a Documentation DVD package, which may have shipped with your product. The Documentation DVD is updated regularly and may be more current than printed documentation. The Documentation DVD package is available as a single unit.

Registered Cisco.com users (Cisco direct customers) can order a Cisco Documentation DVD (product number DOC-DOCDVD=) from the Ordering tool or Cisco Marketplace.

Cisco Ordering tool:

http://www.cisco.com/en/US/partner/ordering/

Cisco Marketplace:

http://www.cisco.com/go/marketplace/

Ordering Documentation

You can find instructions for ordering documentation at this URL:

http://www.cisco.com/univercd/cc/td/doc/es_inpck/pdi.htm

You can order Cisco documentation in these ways:

 Registered Cisco.com users (Cisco direct customers) can order Cisco product documentation from the Ordering tool:

http://www.cisco.com/en/US/partner/ordering/

 Nonregistered Cisco.com users can order documentation through a local account representative by calling Cisco Systems Corporate Headquarters (California, USA) at 408 526-7208 or, elsewhere in North America, by calling 1 800 553-NETS (6387).

Documentation Feedback

You can send comments about technical documentation by using the embedded feedback form next to the document on Cisco.com or by writing to the following address:

Cisco Systems, Inc. Attn: Customer Document Ordering 170 West Tasman Drive San Jose, CA 95134-9883

We appreciate your comments.

Cisco Product Security Overview

Cisco provides a free online Security Vulnerability Policy portal at this URL:

http://www.cisco.com/en/US/products/products_security_vulnerability_policy.html

From this site, you can perform these tasks:

- Report security vulnerabilities in Cisco products.
- Obtain assistance with security incidents that involve Cisco products.
- Register to receive security information from Cisco.

A current list of security advisories and notices for Cisco products is available at this URL:

http://www.cisco.com/go/psirt

If you prefer to see advisories and notices as they are updated in real time, you can access a Product Security Incident Response Team Really Simple Syndication (PSIRT RSS) feed from this URL:

http://www.cisco.com/en/US/products/products_psirt_rss_feed.html

Reporting Security Problems in Cisco Products

Cisco is committed to delivering secure products. We test our products internally before we release them, and we strive to correct all vulnerabilities quickly. If you think that you might have identified a vulnerability in a Cisco product, contact PSIRT:

- Emergencies—security-alert@cisco.com
- Nonemergencies—psirt@cisco.com

We encourage you to use Pretty Good Privacy (PGP) or a compatible product to encrypt any sensitive information that you send to Cisco. PSIRT can work from encrypted information that is compatible with PGP versions 2.x through 8.x.

Never use a revoked or an expired encryption key. The correct public key to use in your correspondence with PSIRT is the one that has the most recent creation date in this public key server list:

http://pgp.mit.edu:11371/pks/lookup?search=psirt%40cisco.com&op=index&exact=on

In an emergency, you can also reach PSIRT by telephone:

1 877 228-7302

1 408 525-6532

Obtaining Technical Assistance

For all customers, partners, resellers, and distributors who hold valid Cisco service contracts, Cisco Technical Support provides 24-hour-a-day, award-winning technical assistance. The Cisco Technical Support Website on Cisco.com features extensive online support resources. In addition, Cisco Technical Assistance Center (TAC) engineers provide telephone support. If you do not hold a valid Cisco service contract, contact your reseller.

Cisco Technical Support Website

The Cisco Technical Support Website provides online documents and tools for troubleshooting and resolving technical issues with Cisco products and technologies. The website is available 24 hours a day, 365 days a year, at this URL:

http://www.cisco.com/techsupport

Access to all tools on the Cisco Technical Support Website requires a Cisco.com user ID and password. If you have a valid service contract but do not have a user ID or password, you can register at this URL:

http://tools.cisco.com/RPF/register/register.do

Use the Cisco Product Identification (CPI) tool to locate your product serial number before submitting a web or phone request for service. You can access the CPI tool from the Cisco Technical Support Website by clicking the **Tools & Resources** link under Documentation & Tools. Choose **Cisco Product Identification Tool** from the Alphabetical Index drop-down list, or click the **Cisco Product Identification Tool** link under Alerts & RMAs. The CPI tool offers three search options: by product ID or model name; by tree view; or for certain products, by copying and pasting **show** command output. Search results show an illustration of your product with the serial number label location highlighted. Locate the serial number label on your product and record the information before placing a service call.

Submitting a Service Request

Using the online TAC Service Request Tool is the fastest way to open S3 and S4 service requests. (S3 and S4 service requests are those in which your network is minimally impaired or for which you require product information.) After you describe your situation, the TAC Service Request Tool provides recommended solutions. If your issue is not resolved using the recommended resources, your service request is assigned to a Cisco TAC engineer. The TAC Service Request Tool is located at this URL:

http://www.cisco.com/techsupport/servicerequest

For S1 or S2 service requests or if you do not have Internet access, contact the Cisco TAC by telephone. (S1 or S2 service requests are those in which your production network is down or severely degraded.) Cisco TAC engineers are assigned immediately to S1 and S2 service requests to help keep your business operations running smoothly.

To open a service request by telephone, use one of the following numbers:

Asia-Pacific: +61 2 8446 7411 (Australia: 1 800 805 227)

EMEA: +32 2 704 55 55 USA: 1 800 553-2447 For a complete list of Cisco TAC contacts, go to this URL:

http://www.cisco.com/techsupport/contacts

Definitions of Service Request Severity

To ensure that all service requests are reported in a standard format, Cisco has established severity definitions.

Severity 1 (S1)—Your network is "down," or there is a critical impact to your business operations. You and Cisco will commit all necessary resources around the clock to resolve the situation.

Severity 2 (S2)—Operation of an existing network is severely degraded, or significant aspects of your business operation are negatively affected by inadequate performance of Cisco products. You and Cisco will commit full-time resources during normal business hours to resolve the situation.

Severity 3 (S3)—Operational performance of your network is impaired, but most business operations remain functional. You and Cisco will commit resources during normal business hours to restore service to satisfactory levels.

Severity 4 (S4)—You require information or assistance with Cisco product capabilities, installation, or configuration. There is little or no effect on your business operations.

Obtaining Additional Publications and Information

Information about Cisco products, technologies, and network solutions is available from various online and printed sources.

• Cisco Marketplace provides a variety of Cisco books, reference guides, and logo merchandise. Visit Cisco Marketplace, the company store, at this URL:

http://www.cisco.com/go/marketplace/

• Cisco Press publishes a wide range of general networking, training and certification titles. Both new and experienced users will benefit from these publications. For current Cisco Press titles and other information, go to Cisco Press at this URL:

http://www.ciscopress.com

Packet magazine is the Cisco Systems technical user magazine for maximizing Internet and
networking investments. Each quarter, Packet delivers coverage of the latest industry trends,
technology breakthroughs, and Cisco products and solutions, as well as network deployment and
troubleshooting tips, configuration examples, customer case studies, certification and training
information, and links to scores of in-depth online resources. You can access Packet magazine at
this URL:

http://www.cisco.com/packet

iQ Magazine is the quarterly publication from Cisco Systems designed to help growing companies
learn how they can use technology to increase revenue, streamline their business, and expand
services. The publication identifies the challenges facing these companies and the technologies to
help solve them, using real-world case studies and business strategies to help readers make sound
technology investment decisions. You can access iQ Magazine at this URL:

http://www.cisco.com/go/iqmagazine

• Internet Protocol Journal is a quarterly journal published by Cisco Systems for engineering professionals involved in designing, developing, and operating public and private internets and intranets. You can access the Internet Protocol Journal at this URL:

http://www.cisco.com/ipj

 World-class networking training is available from Cisco. You can view current offerings at this URL:

http://www.cisco.com/en/US/learning/index.html
