

Preface

This preface describes the audience, organization, and conventions of this installation and configuration guide, and provides information on how to obtain related documentation.

This guide contains specific procedures for the initial hardware installation, and procedures for performing the basic system configuration of your Cisco 7500 series router. The Cisco 7500 series includes six routers: the Cisco 7505, Cisco 7507, Cisco 7507-MX, Cisco 7513, Cisco 7513-MX, and Cisco 7576.

The Cisco 7505, Cisco 7507, and Cisco 7507-MX routers arrive with all processor modules installed; however, the Cisco 7513, Cisco 7513-MX, and Cisco 7576 routers arrive with processor modules individually packaged; you need to install these in your system. After you install the hardware and perform a basic system configuration, you will then use the appropriate software configuration publications and companion publications to more completely configure your system and its interfaces.

Audience

Setting up and maintaining a network requires the knowledge and expertise of people with a variety of skills. In many cases, the people responsible for installing hardware and wiring are not the ones who configure the software and administer the network; therefore, this publication provides information specific to installing the router hardware and performing a basic system configuration. To use this publication, you should be familiar with electronic circuitry and wiring practices, and basic network configuration, and preferably have experience as an electronic or electromechanical technician.

Organization

This guide is organized as follows:

Chapter	Title	Description
Chapter 1	Cisco 7500 Series Product Overview	Describes the physical properties of each of the Cisco 7500 series routers. The remaining sections of this chapter describe router components, which are considered to be standard equipment and ship with each router.
Chapter 2	Preparing for Installation	Describes safety considerations, tools required, an overview of the installation, and procedures you should perform before the actual installation of your Cisco 7500 series router.
Chapter 3	Installing a Cisco 7500 Series Router	Provides information for installing the router hardware. The chapter includes a section describing generic installation requirements; it also includes additional sections for each Cisco 7500 series router.
Chapter 4	Performing a Basic Configuration of the System	Provides simple procedures for completing a basic system configuration of your Cisco 7500 series router, and for checking and saving this configuration to system memory.
Chapter 5	Maintaining Your Cisco 7505 Router	Describes the procedures required to perform routine maintenance and to remove and replace field-replaceable units (FRUs) in your Cisco 7505 router.
Chapter 6	Maintaining Your Cisco 7507 and Cisco 7507-MX Router	Describes the procedures required to perform routine maintenance and to remove and replace field-replaceable units (FRUs) in your Cisco 7507 and Cisco 7507-MX router.
Chapter 7	Maintaining Your Cisco 7513, Cisco 7513-MX, and Cisco 7576 Router	Describes the procedures required to perform routine maintenance and to remove and replace field-replaceable units (FRUs) in your Cisco 7513, Cisco 7513-MX, and Cisco 7576 router.
Chapter 8	Troubleshooting a Cisco 7500 Series Router	Describes basic troubleshooting guidelines, should you have difficulty with your Cisco 7500 series router installation.
Chapter 9	Replacing DRAM on the Route Switch Processor	Describes the procedures required to upgrade the dynamic random-access memory (DRAM) devices on the RSPs in your Cisco 7500 series routers.
Appendix A	Configuration Register Information	Provides configuration register information for the Cisco 7500 Series routers.

Related Documentation

Use the [Cisco 7500 Series Routers Documentation Roadmap](#) to access the appropriate installation and configuration guide for your specific interface processor. Information is available online or on the Documentation CD-ROM. Severity 1 (S1)—Your network is “down,” or there is a critical impact to your business operations. You and Cisco will commit all necessary resources around the clock to resolve the situation.

Severity 2 (S2)—Operation of an existing network is severely degraded, or significant aspects of your business operation are negatively affected by inadequate performance of Cisco products. You and Cisco will commit full-time resources during normal business hours to resolve the situation.

Severity 3 (S3)—Operational performance of your network is impaired, but most business operations remain functional. You and Cisco will commit resources during normal business hours to restore service to satisfactory levels.

Severity 4 (S4)—You require information or assistance with Cisco product capabilities, installation, or configuration. There is little or no effect on your business operations.
