

Cisco 6015 DC Power Entry Module FRU Installation and Replacement Notes

Product Number: 6015-1-PEM-DC=

This document provides an overview of and installation and replacement procedures for the Cisco 6015 DC power entry module (PEM). The DC PEM is a field-replaceable unit (FRU).

Only trained and qualified personnel should be allowed to install, replace, or service this equipment.

Contents

This document includes the following sections:

- Introduction, page 2
- Part and Tool Requirements, page 4
- General Safety Precautions and Maintenance Guidelines, page 5
- Removing and Installing the DC PEM, page 12
- Standards and Certifications, page 15
- Related Documentation, page 15
- Obtaining Documentation, page 15
- Obtaining Technical Assistance, page 16

Introduction

Each Cisco 6015 is equipped with a –48/–60 VDC PEM, which distributes DC power within the chassis. Each DC PEM can be connected in one of the following ways:

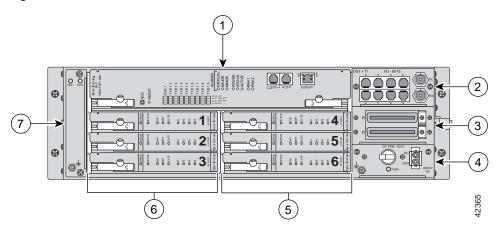

- To the fuse and alarm panel for DC power.
- To the AC/DC converter, which is mounted below the Cisco 6015 chassis. The AC/DC converter converts AC power to usable DC power for the Cisco 6015.

The AC/DC converter can be used only in a commercial environment. It cannot be used in an outside-plant environment.

Figure 1 shows the location of the DC PEM in the Cisco 6015 chassis.

Figure 1 DC PEM Location in the Cisco 6015 Chassis

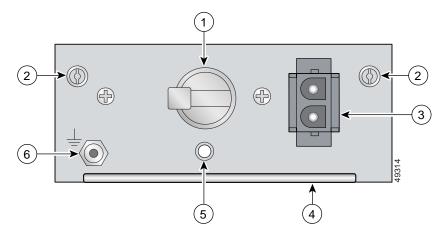

1	NI-2 card	5	xDSL line cards (slots 4 to 6)
2	I/O ¹ module	6	xDSL line cards (slots 1 to 3)
3	DSL ² interface module	7	Fan module
4	DC PEM		

- 1. I/O = input/output
- 2. DSL = digital subscriber line

Figure 2 shows a close-up of the DC PEM faceplate.

Figure 2 DC PEM Faceplate

1	Two-position circuit breaker. The positions are Off (0) and On (1).	4	Extraction handle.
2	Screws to secure the DC PEM to the chassis.	5	 LED showing the status of the DC PEM. Green—Output is correct. Off—DC PEM is not operational or input is not correct.
3	Two-pin connector to cable to the facility DC power or the AC/DC converter.	6	ESD grounding jack.

Table 1 lists the specifications for the DC PEM.

Table 1 DC PEM Specifications

Specification	Description
Dimensions	Height: 1.56 in. (3.96 cm)
	Depth: 9.875 in. (25.08 cm)
	Width: 3.375 in. (8.573 cm)
Weight	1.08 lb (0.49 kg)
Power consumption	20W
Minimum software and network management requirement	Cisco IOS—Release 12.1(4)DA CDM—Release 3.2 (optional)

Part and Tool Requirements

Table 2 lists the tools and equipment that you need to install and remove an I/O module.

Table 2 Tool and Equipment Requirements Checklist

Check	Tools and Equipment			
	Hardware Components and Cables			
	DC PEM.			
	AC/DC converter, optional for AC power—Part number 34-1634-01.			
	AC power receptacle for AC/DC converter, optional for AC power.			
	• Argentina: CAB-ACR=, part number 37-0095-01.			
	• Australia: CAB-ACA=, part number 72-0746-01.			
	• Europe: CAB-ACE=, part number 72-0460-01.			
	• Italy: CAB-ACI=, part number 72-0556-01.			
	• South Africa: CAB-ACSA=, part number 72-1694-01.			
	• Switzerland: CAB-ACS=, part number 72-1483-01.			
	• UK: CAB-ACU=, part number 72-0557-01.			
	• USA: CAB-AC=, part number 72-0259-01.			
	Power cable for DC PEM.			
	• DC power cable to connect to the AC/DC converter—Supplied by Ascom, part number 72-2178-01.			
	• DC power cable to connect to the fuse and alarm panel—Supplied by Cisco, part number 72-2223-01.			
	Equipment necessary for ESD protection—You need this equipment whenever you handle Cisco chassis, modules, and cards.			
	Tools			
	No. 1 Phillips-head or flat-head screwdriver			
	Software Components			
	Cisco IOS or CDM			
	Note See Table 1 for minimum software and network management release requirements			

General Safety Precautions and Maintenance Guidelines

This section describes the following areas:

- General Safety Precautions, page 5
- General Maintenance Guidelines, page 10
- Preventing Electrostatic Discharge Damage, page 11

General Safety Precautions

Before working on the equipment, be aware of standard safety guidelines and the hazards involved in working with electrical circuitry to prevent accidents. Adhere to the following cautions and warnings and those throughout the guide for safe and hazard-free installation.

To see translations of the warnings that appear in this publication, refer to the *Regulatory Compliance* and *Safety Information for the Cisco 6015 System* document that accompanied this product.

Before you start the installation procedures, read the entire document for important information and safety warnings.

Proper ESD protection is required whenever you handle Cisco equipment. Installation and maintenance personnel should be properly grounded by means of grounding straps to eliminate the risk of ESD damage to the equipment. Equipment is subject to ESD damage whenever it is removed from the chassis.

If fuses are already installed in the fuse and alarm panel, remove them. You can replace the fuses after the system is installed. Do not power up the system while you install and connect the system.

If the power connections are improperly connected and power is applied while the cards are installed, the cards and chassis could be damaged.

It is important that the chassis cooling fans run continuously while the system is powered.

Any card that is only partially connected to the backplane can disrupt system operation.

This warning symbol means *danger*. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

A

Warning

This unit is intended for installation in restricted access areas. A restricted access area is where access can only be gained by service personnel through the use of a special tool, lock and key, or other means of security, and is controlled by the authority responsible for the location.

Only trained and qualified personnel should be allowed to install, replace, or service this equipment.

Warning

High performance devices on this card can get hot during operation. To remove the card, hold it by the faceplate and bottom edge. Allow the card to cool before touching any other part of it or before placing it in an antistatic bag.

To prevent personal injury or damage to the chassis, never attempt to lift or tilt the chassis using the handles on the port adapters; these types of handles are not designed to support the weight of the unit. Lift the unit only by grasping the chassis underneath its lower edge.

Warning

Removing I/O cards, CPU cards, fans, and power supplies can expose you to high-energy (high-amperage) circuits and possible ejection of molten metal or to the shock hazard of telephony circuit voltages. Be sure to remove all rings, watches, and other jewelry from fingers, wrists, and arms before removing panels and devices.

Warning

Never attempt to lift the chassis with the handles on the power supplies or the switching modules. These handles are not designed to support the weight of the chassis. Using them to lift or support the chassis can result in severe damage to the equipment and serious bodily injury.

Warning

Before opening the chassis, disconnect the telephone-network cables to avoid contact with telephone-network voltages.

To prevent bodily injury when mounting or servicing this unit in a rack, you must take special precautions to ensure that the system remains stable. The following guidelines are provided to ensure your safety:

- —This unit should be mounted at the bottom of the rack if it is the only unit in the rack.
- —When mounting this unit in a partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack.
- —If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack.

Warning Use extreme care when removing or installing connectors so that you do not damage them.

ing •	Use copper conductors only.
ng	A readily accessible two-poled disconnect device must be incorporated in the fixed wiring.
	You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.
	Do not reach into a vacant slot or chassis while you install or remove a card, a module, or a fan. Exposed circuitry could constitute an energy hazard.
	Blank faceplates and cover panels serve three important functions: they prevent exposure to hazardous voltages and currents inside the chassis; they contain electromagnetic interference (EMI) that might disrupt other equipment; and they direct the flow of cooling air through the chassis. Do not operate the system unless all cards, faceplates, front covers, and rear covers are in place.
	Never defeat the ground conductor or operate the equipment in the absence of a suitably installed ground conductor. Contact the appropriate electrical inspection authority or an electrician if you are uncertain that suitable grounding is available.
	When installing the unit, the ground connection must always be made first and disconnected last.
	This equipment needs to be grounded. Use a green and yellow 12 to 14 AWG ground wire to connect the host to earth ground during normal use.
	Incorrect connection of this or connected equipment to a general purpose outlet could result in a hazardous situation.
	Read the installation instructions before you connect the system to its power source.

Use caution when installing or modifying telephone lines.

Warning

A

Warning

To reduce the risk of fire, use only No. 26 AWG or larger telecommunication line cord.

Warning

To prevent the switch from overheating, do not operate it in an area that exceeds the maximum recommended ambient temperature of 104 F (40 C). To prevent airflow restriction, allow at least 3 inches (7.6 cm) of clearance around the ventilation openings.

Warning

Hold the PEM by the sheet-metal carrier (top and front) only. Internal components may be hot.

Warning

The customer -48/-60V power system must provide reinforced insulation between the primary AC power and the -48/-60VDC output.

Warning

Secure all power cabling when installing this unit to avoid disturbing field-wiring connections.

Warning

Before working on a system that has an on/off switch, turn OFF the power and unplug the power cord.

Warning

This equipment will be inoperable when main power fails.

Warning

The power supply circuitry for the equipment can constitute an energy hazard. Before you install or replace the equipment, remove all jewelry (including rings, necklaces, and watches). Metal objects can come into contact with exposed power supply wiring or circuitry inside the equipment. This could cause the metal objects to heat up and cause serious burns or weld the metal object to the equipment.

Warning

Before working on a chassis or working near power supplies, unplug the power cord on AC units; disconnect the power at the circuit breaker on DC units.

Warning

Do not touch the power supply when the power cord is connected. For systems with a power switch, line voltages are present within the power supply even when the power switch is off and the power cord is connected. For systems without a power switch, line voltages are present within the power supply when the power cord is connected.

Warning

Ultimate disposal of this product should be handled according to all national laws and regulations.

Warning

This chassis must be installed in a rack that is secured to the building structure.

A

Warning

Make sure that your equipment rack is properly ventilated.

Warning

Connect the unit only to a DC power source that complies with the Safety Extra-Low Voltage (SELV) requirements in IEC 60950 based safety standards.

Warning

This equipment is to be installed and maintained by service personnel only as defined by AS/NZS 3260 Clause 1.2.14.3 Service Personnel.

Warning

This product requires short-circuit (overcurrent) protection, to be provided as part of the building installation. Install only in accordance with national and local wiring regulations.

Warning

Care must be given to connecting units to the supply circuit so that wiring is not overloaded.

Warning

The telecommunications lines must be disconnected 1) before unplugging the main power connector or 2) while the housing is open.

Warning

Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.

Warning

Do not use a telephone to report a gas leak in the vicinity of the leak.

Warning

Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electric shock from lightning.

Warning

Hazardous network voltages are present in WAN ports regardless of whether power to the router is OFF or ON. To avoid electric shock, use caution when working near WAN ports. When detaching cables, detach the end away from the router first.

Warning

To reduce the risk of electric shock when servicing any individual unit, disconnect the power cord or cords that connect the unit to the AC powerstrip or DC busbar. When working with a DC system, remove the busbar connector before working on a device. Exposed live voltages are present at the device end; exposure to these may cause injury.

Warning

A voltage mismatch can cause equipment damage and may pose a fire hazard. If the voltage indicated on the label is different from the power outlet voltage, do not connect the chassis to that receptacle.

Warning

Do not use this product near water; for example, near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement, or near a swimming pool.

Warning

Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.

Warning

During line card installation, wear grounding wrist straps to avoid ESD damage to the card. Do not directly touch the backplane with your hand or any metal tool, or you could shock yourself.

——— Warning

An exposed wire lead from a DC-input power source can conduct harmful levels of electricity. Be sure that no exposed portion of the DC-input power source wire extends from the terminal block plug.

This equipment is intended to be grounded. Ensure that the host is connected to earth ground during normal use.

Warning

Metal objects heat up when connected to power and ground, and can cause serious burns.

General Maintenance Guidelines

This section covers the following topics:

- Installation and Replacement Suggestions, page 10
- Hot Swapping Modules, page 11

Installation and Replacement Suggestions

The following examples list recommended installation and replacement practices for the Cisco 6015 system modules.

Any module that is only partially connected to the backplane can disrupt system operation.

- Do not force the module into its slot. This action can damage the pins on the backplane if they are not aligned properly with the module.
- Ensure that the module is straight and not at an angle when you install the module in the slot.
 Installing the module at an angle can damage the module. Use the guide rails to install the module correctly.

Hot Swapping Modules

The DC PEM is an FRU; however, it is not hot swappable. If you remove the DC PEM, service is interrupted for the entire system until you replace the DC PEM.

Only a trained technician should install and remove the DC PEM.

Preventing Electrostatic Discharge Damage

Proper ESD protection is required whenever you handle Cisco equipment. ESD damage, which can occur when electronic cards or components are improperly handled, results in complete or intermittent failures. Use an antistatic strap when you handle any card or component.

There is an ESD grounding jack that is located on the DC PEM, as shown in Figure 2.

Use the ESD grounding jack on the fan module for all maintenance except when you are removing the fan module. Use the ESD grounding jack on the DC PEM when you are removing the fan module.

Follow these guidelines to prevent ESD damage:

- · Always use an ESD ankle or wrist strap and ensure that the wrist strap makes good skin contact.
- Connect the equipment end of the strap to the ESD grounding jack. There are two ESD grounding jacks that are located on the following Cisco 6015 chassis modules:
 - Fan module
 - DC PEM
- When you install a component, use available ejector levers or captive installation screws to properly seat the bus connectors in the backplane or midplane. These devices prevent accidental removal, provide proper grounding for the system, and help ensure that bus connectors are properly seated.
- When you remove a component, use available ejector levers or captive installation screws to release
 the bus connectors from the backplane or midplane.
- Handle the modules by the extraction handles only; avoid touching the printed circuit boards or connectors.
- Place a removed component board-side-up on an antistatic surface or in a static-shielding container. If you plan to return the component to the factory, immediately place it in a static-shielding container.
- Avoid contact between the printed circuit boards and clothing. The wrist strap protects components from ESD voltages on the body only; ESD voltages on clothing can still cause damage.

Periodically check the resistance value of the antistatic strap. Ensure that the measurement is between 1 and 10 megohms.

Removing and Installing the DC PEM

The following sections describe how to remove or install a DC PEM.

Proper ESD protection is required whenever you handle Cisco equipment. Installation and maintenance personnel should be properly grounded by means of grounding straps to eliminate the risk of ESD damage to the equipment. Equipment is subject to ESD damage whenever it is removed from the chassis.

Removing the DC PEM

Complete the following steps to remove the DC PEM from the Cisco 6015 chassis:

- Step 1 Connect a grounding strap to the ESD grounding jack that is located on the fan module.
- Step 2 Set the circuit breaker on the DC PEM to the OFF (0) position.
- Step 3 Unplug the power cord from the wall outlet, if you are using AC power.
- Step 4 Remove the fuses from the fuse and alarm panel, if you are using DC power.
- Step 5 Disconnect the cable that runs from either the fuse and alarm panel or the AC/DC converter to the DC PEM.
- Step 6 Use a flat-head or Phillips-head screwdriver to unscrew the two screws that hold the DC PEM to the Cisco 6015 chassis
- Step 7 Hold the extraction handle on the front of the module and carefully slide the module out of the slot. See the "Installing the DC PEM" section on page 12 for DC PEM installation procedures.

Installing the DC PEM

If you are using AC power and the power cord is plugged in to the wall outlet, unplug it.

If you are using DC power and the fuses are installed in the fuse and alarm panel, remove them. You can replace the fuses after the system is installed and connected.

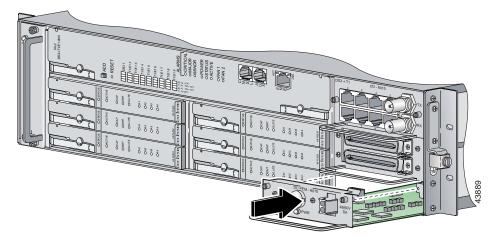

The fuse and alarm panel is not provided by Cisco.

Complete the following steps to install the DC PEM in the Cisco 6015 chassis:

- Step 1 Connect a grounding strap to the ESD grounding jack that is located on the fan module.
- **Step 2** Verify that the circuit breaker on the DC PEM is set to the OFF (0) position.
- Step 3 Horizontally align the module edges with the module guides at the right and left of the slot in the Cisco 6015.

Figure 3 shows the DC PEM installation.

Figure 3 DC PEM Installation

Step 4 Hold the extraction handle on the front of the module and gently apply pressure while carefully pushing the module into the slot.

Note

Forcefully inserting the DC PEM in the slot could cause damage to the EMI gasketing located on the top of the faceplate.

- Step 5 Push on the faceplate of the module to fully seat the module.
- Step 6 Use a flat-head or Phillips-head screwdriver to attach the two screws to the Cisco 6015 chassis.
- **Step 7** If you are using AC power, connect the DC PEM to the AC/DC converter.

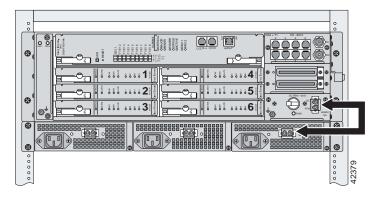

Note

Refer to the *Cisco 6015 Hardware Installation Guide* for AC/DC converter installation procedures.

a. Attach one end of the DC power cable (part number 72-2178-01) to the DC PEM, as shown in Figure 4.

Figure 4 Connecting the DC PEM to the AC/DC Converter

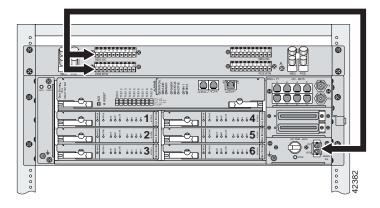

- b. Attach the other end of the cable to the AC/DC converter, as shown in Figure 4.
- c. Attach the AC power receptacle to the AC/DC converter.

If the power connections are improperly connected and power is applied while the cards are installed, the cards and chassis could be damaged.

- Step 8 If you are using DC power, connect the DC PEM to the fuse and alarm panel.
 - a. Attach one end of the DC PEM power cable (part number 72-2223-01) to the DC PEM, as shown in Figure 5.

Figure 5 Connecting the DC PEM to the Fuse and Alarm Panel

- b. Attach the red wire coming from the DC PEM to a fuse and alarm panel POS (positive) DC connector, as shown in Figure 5.
- c. Attach the black wire coming from the DC PEM to a fuse and alarm panel NEG (negative) DC connector, as shown in Figure 5.

Connect each Cisco 6015 system component to a separate fuse. Do not power the components in the rack by chaining them together.

Refer to the *Cisco 6015 Hardware Installation Guide* for the calculation tables used to determine the typical power requirement that is necessary to operate each Cisco 6015 component in your configuration type as well as the entire Cisco 6015 system.

- Step 9 Plug the AC power cord into the wall outlet or reinsert the fuses in the fuse and alarm panel.
- Step 10 Set the circuit breaker on the DC PEM to the ON (1) position.
- Step 11 Verify that the DC PEM is operational by locating the LEDs on the front of the DC PEM. If the LED is
 - Green—Output is correct.
 - Off—DC PEM is not operational or input is not correct. Refer to the *Cisco 6015 Hardware Installation Guide* for troubleshooting procedures.

Step 12 Verify that the AC/DC converter is operational by locating the LEDs on the front of the AC/DC converter.

- If the left LED is green, this indicates that there is good AC input.
- If the right LED is green, this indicates that there is good DC output between the AC/DC converter and the DC PEM.
- If either LED is off, troubleshoot the AC/DC converter or the AC input.

Standards and Certifications

The DC PEM has the same standards as the Cisco 6015 system, as shown in Table 3.

Table 3 Regulatory Compliance for Cisco 6015 Hardware

Area of Compliance	Compliance Standard
Product Safety	UL 1950, 3rd Edition, EN 60950, AS/NZS 3260, IEC 950, FCC Part 15, Class B
Emissions	CISPR22, EN55022, AS/ANS 3548, ICES-003, VCCI, BSMI (CNS 13438)
Immunity	EN61000-4-2, 3, 4, 5 and 6 / IEC-61000-4-2, 3, 4, 5 and 6; EN61000-4-11 / IEC-61000-4-11
NEBS	Bellcore GR-63-CORE, GR-1089-CORE, SR-3590 Level 3
Telecom	FCC Part 68, CS-03, ACA TS 016: 1997, CTR 12 97/520/EC Amendment 1 1997 (TBR 12), JATE GREEN BOOK 1997
ETSI	300-386-1, 300-386-2, 300-019

Related Documentation

Obtaining Documentation

The following sections explain how to obtain documentation from Cisco Systems.

World Wide Web

You can access the most current Cisco documentation on the World Wide Web at the following URL:

http://www.cisco.com

Translated documentation is available at the following URL:

http://www.cisco.com/public/countries_languages.shtml

Documentation CD-ROM

Cisco documentation and additional literature are available in a Cisco Documentation CD-ROM package, which is shipped with your product. The Documentation CD-ROM is updated monthly and may be more current than printed documentation. The CD-ROM package is available as a single unit or through an annual subscription. Registered Cisco.com users can order the Documentation CD-ROM through the online Subscription Store:

http://www.cisco.com/go/subscription

Documentation Feedback

If you are reading Cisco product documentation on Cisco.com, you can submit technical comments electronically. Click **Leave Feedback** at the bottom of the Cisco Documentation home page. After you complete the form, print it out and fax it to Cisco at 408 527-0730.

You can e-mail your comments to bug-doc@cisco.com.

To submit your comments by mail, use the response card behind the front cover of your document, or write to the following address:

Cisco Systems Attn: Document Resource Connection 170 West Tasman Drive

San Jose, CA 95134-9883

We appreciate your comments.

Obtaining Technical Assistance

Cisco provides Cisco.com as a starting point for all technical assistance. Customers and partners can obtain documentation, troubleshooting tips, and sample configurations from online tools by using the Cisco Technical Assistance Center (TAC) Web Site. Cisco.com registered users have complete access to the technical support resources on the Cisco TAC Web Site.

Cisco.com

Cisco.com is the foundation of a suite of interactive, networked services that provides immediate, open access to Cisco information, networking solutions, services, programs, and resources at any time, from anywhere in the world.

Cisco.com is a highly integrated Internet application and a powerful, easy-to-use tool that provides a broad range of features and services to help you to

- Streamline business processes and improve productivity
- Resolve technical issues with online support
- Download and test software packages
- Order Cisco learning materials and merchandise
- Register for online skill assessment, training, and certification programs

You can self-register on Cisco.com to obtain customized information and service. To access Cisco.com, go to the following URL:

http://www.cisco.com

Technical Assistance Center

The Cisco TAC is available to all customers who need technical assistance with a Cisco product, technology, or solution. Two types of support are available through the Cisco TAC: the Cisco TAC Web Site and the Cisco TAC Escalation Center.

Inquiries to Cisco TAC are categorized according to the urgency of the issue:

- Priority level 4 (P4)—You need information or assistance concerning Cisco product capabilities, product installation, or basic product configuration.
- Priority level 3 (P3)—Your network performance is degraded. Network functionality is noticeably impaired, but most business operations continue.
- Priority level 2 (P2)—Your production network is severely degraded, affecting significant aspects of business operations. No workaround is available.
- Priority level 1 (P1)—Your production network is down, and a critical impact to business operations will occur if service is not restored quickly. No workaround is available.

Which Cisco TAC resource you choose is based on the priority of the problem and the conditions of service contracts, when applicable.

Cisco TAC Web Site

The Cisco TAC Web Site allows you to resolve P3 and P4 issues yourself, saving both cost and time. The site provides around-the-clock access to online tools, knowledge bases, and software. To access the Cisco TAC Web Site, go to the following URL:

http://www.cisco.com/tac

All customers, partners, and resellers who have a valid Cisco services contract have complete access to the technical support resources on the Cisco TAC Web Site. The Cisco TAC Web Site requires a Cisco.com login ID and password. If you have a valid service contract but do not have a login ID or password, go to the following URL to register:

http://www.cisco.com/register/

If you cannot resolve your technical issues by using the Cisco TAC Web Site, and you are a Cisco.com registered user, you can open a case online by using the TAC Case Open tool at the following URL:

http://www.cisco.com/tac/caseopen

If you have Internet access, it is recommended that you open P3 and P4 cases through the Cisco TAC Web Site.

Cisco TAC Escalation Center

The Cisco TAC Escalation Center addresses issues that are classified as priority level 1 or priority level 2; these classifications are assigned when severe network degradation significantly impacts business operations. When you contact the TAC Escalation Center with a P1 or P2 problem, a Cisco TAC engineer will automatically open a case.

To obtain a directory of toll-free Cisco TAC telephone numbers for your country, go to the following LIRL \cdot

http://www.cisco.com/warp/public/687/Directory/DirTAC.shtml

Before calling, please check with your network operations center to determine the level of Cisco support services to which your company is entitled; for example, SMARTnet, SMARTnet Onsite, or Network Supported Accounts (NSA). In addition, please have available your service agreement number and your product serial number.

This document is to be used in conjunction with the documents listed in the "Related Documentation" section.
