

Quick Start Guide

CATALYST 1900 SERIES

CABLING AND SETUP

1

Take Out What You Need

2

Cable the Switch

3

Assign an IP Address to the Switch

4

Display the Web Console

1 Take Out What You Need

Catalyst 1900 series switch

Catalyst 1900 Series Quick Start

Catalyst 1900 Series Installation and Configuration Guide

RJ-45-to-RJ-45 rollover console cable

Black AC power cable

RJ-45-to-DB-9 serial connector

RJ-45-to-DB-25 terminal connector

Rack-mount kit

Rubber feet

Note: You need to supply Category 3, 4, or 5 straight-through or crossover UTP cables to connect to Ethernet devices.

2 Cable the Switch

Note: Use a straight-through cable to connect two ports when one of the ports is designated with an X. Use a crossover cable to connect two ports when both ports are designated with an X.

Connect to Workstations, Servers, and Routers

- Connect a Category 3, 4, or 5 **straight-through** UTP cable to a 10BaseT port on the switch and to a 10BaseT port on the workstation, server, or router.
- Connect a Category 5 **straight-through** UTP cable to a 100BaseTX port on the switch and to a 100BaseTX port on the workstation, server, or router.

Connect to Switches and Hubs

- Connect a Category 3, 4, or 5 **crossover** UTP cable to a 10BaseT port on the switch and to a 10BaseT port on the target switch or hub.
- Connect a Category 5 **crossover** UTP cable to a 100BaseTX port on the switch and to a 100BaseTX port on the target switch or hub.
- Connect a 50/125- or 62.5/125-micron multimode fiber-optic cable to the 100BaseFX port on the switch and to a 100BaseFX port on the workstation, server, target switch, router, or hub.

Connect the Console Cable

- 1 Configure your terminal, PC, or laptop to match these characteristics of the CONSOLE port on the switch:
9600 baud, 8 data bits, 1 stop bit, no parity, and no flow control.
- 2 Connect the supplied rollover cable to the CONSOLE port on the switch.
- 3 Connect the other end of the rollover cable to your terminal, PC, or laptop (use an adapter, if necessary).
- 4 From your terminal, PC, or laptop, start the terminal emulation program.

Power Up the Switch

- 1 Connect one end of the power cord to the switch and the other end to a power source.

Note: You can use the internal power supply and/or the Cisco 600W AC redundant power system (RPS). Attach only the Cisco RPS (model PWR600-AC-RPS) to the RPS receptacle.

- 2 Wait approximately 2 minutes for the switch to complete its power-on self-test (POST) and to discover the network.

3 Assign IP Information to the Switch

Assign an IP address to the switch so that you can use the web console and the switch can communicate with local routers and the Internet. Contact your system administrator for the switch IP information, and record it here.

Switch IP address: ____ . ____ . ____ . ____

Subnet mask: ____ . ____ . ____ . ____

Default gateway: ____ . ____ . ____ . ____

- 1 After POST completes, the Management Console Logon Screen appears on your terminal, PC, or laptop. Enter the **[I] IP Configuration** option from this logon screen.

```

```

```
Standard Edition Software
Ethernet address:
00-E0-1E-7E-B4-40
```

```
PCA Number: 73-2239-01
PCA Serial Number: SAD01200001
Model Number: WS-C1924-A
System Serial Number: FAA01200001
```

```
-----
User Interface Menu
```

```
[M] Menus
[I] IP Configuration
```

```
Enter Selection:
```

The IP Configuration Menu appears.

- 2 Enter the **[I] IP address** option from the IP Configuration Menu.

```
Catalyst 1900 - IP Configuration

Ethernet Address: 00-E0-1E-7E-B4-40

-----Settings-----
[I] IP address
[S] Subnet mask
[G] Default gateway
[M] IP address of DNS server 1
[N] IP address of DNS server 2
[D] Domain name
[R] Use Routing Information Protocol
-----Actions-----
[P] Ping
[X] Exit to previous menu
```

```
Enter Selection:
```

- 3 Enter the IP address of the switch at the prompt:

```
Enter administrative IP address in
dotted quad format (nnn.nnn.nnn.nnn):
```

```
Current setting ==> 0.0.0.0
New setting ==>
```

The IP address appears on the IP Configuration Menu.

- 4 If you want, you can also enter the subnet mask and default gateway from the IP Configuration Menu. If the switch is connected to a network that has a DHCP server, the server assigns this information automatically.
- 5 Enter the **[X] Exit** option until you exit from the menu console.

4 Display the Web Console

After you assign an IP address to the switch, you can display the web console.

- 1 Start Netscape Communicator 4.xx or Internet Explorer 4.xx.

If you use Netscape 4.xx, enable JavaScript in the Advanced Preferences list. If you use Internet Explorer 4.xx, JavaScript is enabled by default.

- 2 Enter the IP address of the switch in the Location field if you are using Netscape (the Address field if you are using Internet Explorer), and press Return. The Basic System Configuration page appears.

The screenshot shows the Catalyst 1900 Switch Manager web console. The interface includes a navigation menu at the top with options like HOME, HELP, ADDRESS, SNMP, FTP, CPU, SPAN, CONFIG, STATISTICS, SYSTEM, and DUMP. The main content area is titled 'Catalyst 1900 Switch Manager' and 'Basic System Configuration'. It contains several input fields: Name of Switch, Switch IP Address (192.168.1.10), Physical Location, User/Cluster Name, Assign/Change Password, and Show/Hide Password. Below these fields is a 'Mode' button and a row of LEDs. At the bottom, there is a 'Connecting to Cisco Help Resources' section with three links.

Annotations with arrows point to various elements:

- Click Apply after making changes on a page. (Points to the 'Apply' button)
- Click Revert to discard "unapplied" changes on a page. (Points to the 'Revert' button)
- Click Help for help on a specific page. (Points to the 'Help' button)
- Click the Mode button to change the mode the LEDs display: port status, switch utilization, and port duplex operation. (Points to the 'Mode' button)
- Click these topics to move from page to page. When the cursor is above a topic, a pop-up briefly describes the options on that particular page. (On Netscape only.) (Points to the navigation menu)
- Click a port to display its settings and statistics. (Points to one of the LEDs)

The switch is designed to operate with little or no user intervention. In most cases, you can use it with its default settings as soon as you assign it an IP address. You can also use the web console to change the switch configuration and monitor network conditions and statistics.

Note: The *Catalyst 1900 Series Installation and Configuration Guide* provides complete information about the web console and describes how to configure the switch.
