Tel: 408 526-4000
800 553-NETS (6387)
Fax: 408 526-4100

Customer Order Number: DOC-7814356=
Text Part Number: 78-14356-01

THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The following information is for FCC compliance of Class A devices: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to correct the interference at their own expense.

The following information is for FCC compliance of Class B devices: The equipment described in this manual generates and may radiate radio-frequency energy. If it is not installed in accordance with Cisco's installation instructions, it may cause interference with radio and television reception. This equipment has been tested and found to comply with the limits for a Class B digital device in accordance with the specifications in part 15 of the FCC rules. These specifications are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation.

Modifying the equipment without Cisco's written authorization may result in the equipment no longer complying with FCC requirements for Class A or Class B digital devices. In that event, your right to use the equipment may be limited by FCC regulations, and you may be required to correct any interference to radio or television communications at your own expense.

You can determine whether your equipment is causing interference by turning it off. If the interference stops, it was probably caused by the Cisco equipment or one of its peripheral devices. If the equipment causes interference to radio or television reception, try to correct the interference by using one or more of the following measures:

- Turn the television or radio antenna until the interference stops.
- Move the equipment to one side or the other of the television or radio.
- Move the equipment farther away from the television or radio.
- Plug the equipment into an outlet that is on a different circuit from the television or radio. (That is, make certain the equipment and the television or radio are on circuits controlled by different circuit breakers or fuses.)

Modifications to this product not authorized by Cisco Systems, Inc. could void the FCC approval and negate your authority to operate the product.

The Cisco implementation of TCP header compression is an adaptation of a program developed by the University of California, Berkeley (UCB) as part of UCB's public domain version of the UNIX operating system. All rights reserved. Copyright © 1981, Regents of the University of California.

NOTWITHSTANDING ANY OTHER WARRANTY HEREIN, ALL DOCUMENT FILES AND SOFTWARE OF THESE SUPPLIERS ARE PROVIDED "AS IS" WITH ALL FAULTS. CISCO AND THE ABOVE-NAMED SUPPLIERS DISCLAIM ALL WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THOSE OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OR ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

CCIP, the Cisco *Powered Network* mark, the Cisco Systems Verified logo, Cisco Unity, Fast Step, Follow Me Browsing, FormShare, Internet Quotient, iQ Breakthrough, iQ Expertise, iQ FastTrack, the iQ Logo, iQ Net Readiness Scorecard, Networking Academy, ScriptShare, SMARTnet, TransPath, and Voice LAN are trademarks of Cisco Systems, Inc.; Changing the Way We Work, Live, Play, and Learn, Discover All That's Possible, The Fastest Way to Increase Your Internet Quotient, and iQuick Study are service marks of Cisco Systems, Inc.; and Aironet, ASIST, BPX, Catalyst, CCDA, CCDP, CCIE, CCNA, CCNP, Cisco, the Cisco Certified Internetwork Expert logo, Cisco IOS, the Cisco IOS logo, Cisco Press, Cisco Systems, Cisco Systems Capital, the Cisco Systems logo, Empowering the Internet Generation, Enterprise/Solver, EtherChannel, EtherSwitch, GigaStack, IOS, IP/TV, LightStream, MGX, MICA, the Networkers logo, Network Registrar, *Packet*, PIX, Post-Routing, Pre-Routing, RateMUX, Registrar, SlideCast, StrataView Plus, Stratm, SwitchProbe, TeleRouter, and VCO are registered trademarks of Cisco Systems, Inc. and/or its affiliates in the U.S. and certain other countries.

CHAPTER 1

Getting Started **1-1**

1.1 Setting up TL1 Communication	1-1
1.1.1 Open a TL1 session	1-2
Procedure: Open a TL1 Session Via the CTC	1-2
Procedure: Open a TL1 Session Via Telnet	1-2
Procedure: Open a TL1 Session Via Craft Interface	1-3
1.2 TL1 Command Syntax	1-4
1.3 Autonomous Messages	1-5
1.3.1 Alarm Codes	1-5
1.4 TL1 Commands by User Security	1-6
1.5 Provisioning a DS3E Card in CTC Using TL1	1-7
1.6 Mixed Mode Timing Support	1-7
1.7 TL1 Command Completion Behavior	1-7
1.7.1 General Rules	1-7
1.7.1.1 Explicit List of AIDs - No Wildcards	1-7
1.7.1.2 Implicit List of AIDs - Single AID With Wildcard	1-8
1.7.1.3 Explicit List Grouped With Implicit List	1-8
1.7.2 Retrieval of Cross Connections	1-8
1.7.2.1 Explicit List of AIDs - No Wildcards	1-8

1.7.2.2 Implicit List of AIDs - Single AID With Wildcard **1-8**

1.7.2.3 Explicit List Grouped With Implicit List **1-9**

1.8 Test Access **1-9**

1.8.1 Mode Definitions **1-10**

1.8.2 Split E and F Access Modes **1-11**

1.8.3 Loop E and F Modes **1-12**

1.8.4 Split A and B Access Modes **1-13**

1.8.5 Creating Test Access Points **1-14**

1.8.6 Connecting Test Access Points **1-14**

1.8.7 Changing Test Access Modes **1-15**

1.8.8 Disconnecting Test Access Modes **1-15**

1.8.9 Deleting Test Access Points **1-15**

CHAPTER 2

TL1 Gateway 2-1

2.1 Gateway Network Element Topology **2-1**

2.2 Implementing TL1 Gateway **2-4**

 Log Into a Remote ENE **2-5**

 Forward Commands by Specifying the ENE TID (Node 1 or Node 3) **2-5**

 Receive Autonomous Messages from the Remote ENE **2-5**

 Log Out of a Remote ENE **2-5**

CHAPTER 3

TL1 Command Descriptions 3-1

3.1 TL1 Commands by Category **3-1**

3.2 TL1 Commands by Card (ONS 15454) **3-5**

3.3 TL1 Commands by Card (ONS 15327) **3-18**

3.4 TL1 Commands, Categories and Cards **3-22**

3.5 TL1 Commands **3-30**

 3.5.1 ACT-USER: Activate User **3-30**

 3.5.2 ALW-MSG-ALL: Allow Message All **3-31**

 3.5.3 ALW-MSG-DBCHG: Allow Database Change Message **3-32**

 3.5.4 ALW-Swdx-EQPT: Allow Switch Duplex Equipment **3-32**

 3.5.5 ALW-Swtoprotn-EQPT: Allow Switch to Protection Equipment **3-33**

 3.5.6 ALW-Swtowkg-EQPT: Allow Switch to Working Equipment **3-34**

 3.5.7 CANC: Cancel **3-35**

 3.5.8 CANC-USER: Cancel User **3-36**

 3.5.9 CHG-ACCMD-<MOD_TACC>: Change Access Mode (DS1, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1) **3-37**

 3.5.10 CONN-TACC-<MOD_TACC>: Connect TACC (DS1, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1) **3-37**

- 3.5.11 DISC-TACC: Disconnect TACC **3-39**
- 3.5.12 DLT-CRS-<STS_PATH>: Delete Cross Connection (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C) **3-39**
- 3.5.13 DLT-CRS-VT1: Delete Virtual Tributary Cross Connect **3-41**
- 3.5.14 DLT-EQPT: Delete Equipment **3-42**
- 3.5.15 DLT-FFP-<OCN_TYPE>: Delete Facility Protection Group (OC3, OC12, OC48, OC192) **3-43**
- 3.5.16 DLT-USER-SECU: Delete User Security **3-43**
- 3.5.17 ED-<OCN_TYPE>: Edit (OC3, OC12, OC48, OC192) **3-44**
- 3.5.18 ED-<STS_PATH>: Edit (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C) **3-46**
- 3.5.19 ED-BITS: Edit Building Integrated Timing Supply **3-49**
- 3.5.20 ED-BLSR: Edit Bidirectional Line Switched Ring **3-50**
- 3.5.21 ED-DAT: Edit Date and Time **3-52**
- 3.5.22 ED-DS1: Edit DS1 Layer of DS3XM **3-52**
- 3.5.23 ED-EC1: Edit Electrical Carrier **3-53**
- 3.5.24 ED-EQPT: Edit Equipment **3-54**
- 3.5.25 ED-FFP-<OCN_TYPE>: Edit Facility Protection Group (OC3, OC12, OC48, OC192) **3-55**
- 3.5.26 ED-G1000: Edit G1000 **3-56**
- 3.5.27 ED-NE-GEN: Edit Network Element GEN **3-57**
- 3.5.28 ED-NE-SYNCN: Edit Network Element Synchronization **3-58**
- 3.5.29 ED-PID: Edit Password **3-59**
- 3.5.30 ED-SYNCN: Edit Synchronization **3-60**
- 3.5.31 ED-T1: Edit T1 Facility **3-61**
- 3.5.32 ED-T3: Edit T3 Facility **3-62**
- 3.5.33 ED-USER-SECU: Edit User Security **3-63**
- 3.5.34 ED-VT1: Edit Virtual Tributary **3-65**
- 3.5.35 ENT-CRS-<STS_PATH>: Enter Cross Connection (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C) **3-66**
- 3.5.36 ENT-CRS-VT1: Enter Virtual Tributary Cross Connection **3-67**
- 3.5.37 ENT-EQPT: Enter Equipment **3-69**
- 3.5.38 ENT-FFP-<OCN_TYPE>: Enter Facilities Protection Group (OC3, OC12, OC48, OC192) **3-71**
- 3.5.39 ENT-USER-SECU: Enter User Security **3-72**
- 3.5.40 EX-SW-<OCN_BLSR>: Operate Protection Switch (OC12, OC48, OC192) **3-73**
- 3.5.41 INH-MSG-ALL: Inhibit Message All **3-74**
- 3.5.42 INH-MSG-DBCHG: Inhibit Database Change Message **3-75**
- 3.5.43 INH-Swdx-EQPT: Inhibit Switch Duplex Equipment **3-75**
- 3.5.44 INH-SWTPROTN-EQPT: Inhibit Switch to Protection Equipment **3-76**
- 3.5.45 INH-SWTOWKG-EQPT: Inhibit Switch to Working Equipment **3-77**
- 3.5.46 INIT-REG-<MOD2>: Initialize Register (DS1, EC1, OC3, OC12, OC48, OC192, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1) **3-79**
- 3.5.47 INIT-SYS: Initialize System **3-80**

3.5.48 OPR-EXT-CONT: Operate External Control	3-81
3.5.49 OPR-LPBK-<MOD2_IO>: Operate Loopback (DS1, EC1, G1000, OC3, OC12, OC48, OC192, T1, T3)	3-82
3.5.50 OPR-PROTNSW-<OCN_TYPE>: Operate Protection Switch (OC3, OC12, OC48, OC192)	3-82
3.5.51 OPR-PROTNSW-<STS_PATH>: Operate Protection Switch (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)	3-84
3.5.52 OPR-PROTNSW-VT1: Operate Virtual Tributary Protection Switch	3-85
3.5.53 OPR-SYNCNSW: Operate Synchronization Switch	3-86
3.5.54 REPT ALM <MOD2ALM>: Report Alarm (DS1, E100, E1000, EC1, G1000, OC3, OC12, OC48, OC192, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)	3-87
3.5.55 REPT ALM BITS: Report Alarm Building Integrated Timing Supply	3-88
3.5.56 REPT ALM COM: Report Alarm COM	3-89
3.5.57 REPT ALM ENV: Report Alarm Environment	3-90
3.5.58 REPT ALM EQPT: Report Alarm Equipment	3-91
3.5.59 REPT ALM RING: Report Alarm Ring	3-92
3.5.60 REPT ALM SYNCN: Report Alarm Synchronization	3-93
3.5.61 REPT DBCHG: Report Change	3-94
3.5.62 REPT EVT <MOD2ALM>: Report Event (DS1, E100, E1000, EC1, G1000, OC3, OC12, OC48, OC192, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)	3-95
3.5.63 REPT EVT BITS: Report Event BITS	3-96
3.5.64 REPT EVT COM: Report Event COM	3-97
3.5.65 REPT EVT ENV: Report Event Environment	3-98
3.5.66 REPT EVT EQPT: Report Event Equipment	3-99
3.5.67 REPT EVT RING: Report Event Ring	3-100
3.5.68 REPT EVT SECU: Report Event Security	3-101
3.5.69 REPT EVT SYNCN: Report Event Synchronization	3-102
3.5.70 REPT SW: Report Switch	3-103
3.5.71 RLS-EXT-CONT: Release External Control	3-103
3.5.72 RLS-LPBK-<MOD2_IO>: Release Loopback (DS1, EC1, G1000, OC3, OC12, OC48, OC192, T1, T3)	3-104
3.5.73 RLS-PROTNSW-<OCN_TYPE>: Release Protection Switch (OC3, OC12, OC48, OC192)	3-105
3.5.74 RLS-PROTNSW-<STS_PATH>: Release Protection Switch (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)	3-106
3.5.75 RLS-PROTNSW-VT1: Release Virtual Tributary Protection Switch	3-106
3.5.76 RLS-SYNCNSW: Release Synchronization Switch	3-107
3.5.77 RMV-<MOD_PORT>: Remove (EC1, G1000, OC3, OC12, OC48, OC192, T1, T3)	3-108
3.5.78 RST-<MOD_PORT>: Restore (EC1, G1000, OC3, OC12, OC48, OC192, T1, T3)	3-108
3.5.79 RTRV-<OCN_TYPE>: Retrieve (OC3, OC12, OC48, OC192)	3-109
3.5.80 RTRV-<STS_PATH>: Retrieve (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)	3-112

3.5.81 RTRV-ALM-<MOD2ALM>: Retrieve Alarm (DS1, E100, E1000, EC1, G1000, OC3, OC12, OC48, OC192, STS1, STS3C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)	3-114
3.5.82 RTRV-ALM-ALL: Retrieve Alarm All	3-116
3.5.83 RTRV-ALM-BITS: Retrieve Alarm Building Integrated Timing Supply	3-117
3.5.84 RTRV-ALM-ENV: Retrieve Alarm Environment	3-119
3.5.85 RTRV-ALM-EQPT: Retrieve Alarm Equipment	3-121
3.5.86 RTRV-ALM-RING: Retrieve Alarm Ring	3-122
3.5.87 RTRV-ALM-SYNCN: Retrieve Alarm Synchronization	3-124
3.5.88 RTRV-ATTR-CONT: Retrieve Attribute Control	3-125
3.5.89 RTRV-ATTR-ENV: Retrieve Attribute Environment	3-126
3.5.90 RTRV-BITS: Retrieve Building Integrated Timing Supply	3-128
3.5.91 RTRV-BLSR: Retrieve Bidirectional Line Switched Ring	3-129
3.5.92 RTRV-COND-<MOD2ALM>: Retrieve Condition (DS1, E100, E1000, EC1, G1000, OC3, OC12, OC48, OC192, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)	3-131
3.5.93 RTRV-COND-ALL: Retrieve Condition All	3-132
3.5.94 RTRV-COND-BITS: Retrieve Condition Building Integrated Timing Supply	3-134
3.5.95 RTRV-COND-ENV: Retrieve Condition Environment	3-136
3.5.96 RTRV-COND-EQPT: Retrieve Condition Equipment	3-137
3.5.97 RTRV-COND-RING: Retrieve Condition Ring	3-139
3.5.98 RTRV-COND-SYNCN: Retrieve Condition Synchronization	3-140
3.5.99 RTRV-CRS-<STS_PATH>: Retrieve Cross Connect (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)	3-141
3.5.100 RTRV-CRS-VT1: Retrieve Virtual Tributary Cross Connect	3-144
3.5.101 RTRV-DS1: Retrieve DS1 Layer of DS3XM	3-146
3.5.102 RTRV-EC1: Retrieve EC1	3-147
3.5.103 RTRV-EQPT: Retrieve Equipment	3-148
3.5.104 RTRV-EXT-CONT: Retrieve External Control	3-150
3.5.105 RTRV-FFP-<OCN_TYPE>: Retrieve Facility Protection Group (OC3, OC12, OC48, OC192)	3-151
3.5.106 RTRV-G1000: Retrieve G1000 Facility	3-153
3.5.107 RTRV-HDR: Retrieve Header	3-154
3.5.108 RTRV-INV: Retrieve Inventory	3-154
3.5.109 RTRV-LOG: Retrieve Log	3-155
3.5.110 RTRV-NE-GEN: Retrieve Network Element General	3-157
3.5.111 RTRV-NE-IPMAP: Retrieve Network Element IPMAP	3-158
3.5.112 RTRV-NE-SYNCN: Retrieve Network Element Synchronization	3-159
3.5.113 RTRV-PM-<MOD2>: Retrieve Performance (DS1, EC1, OC3, OC12, OC48, OC192, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)	3-160
3.5.114 RTRV-PMMODE-<STS_PATH>: Retrieve Performance Mode of PM Data Collection (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)	3-163

3.5.115 RTRV-PTHTRC-<STS_PATH>: Retrieve Path Trace (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)	3-164
3.5.116 RTRV-SYNCN: Retrieve Synchronization	3-166
3.5.117 RTRV-T1: Retrieve T1 Facility	3-167
3.5.118 RTRV-T3: Retrieve T3	3-168
3.5.119 RTRV-TH-<MOD2>: Retrieve Threshold (DS1, EC1, OC3, OC12, OC48, OC192, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)	3-170
3.5.120 RTRV-TOD: Retrieve Time of Day	3-171
3.5.121 RTRV-VT1: Retrieve Virtual Tributary	3-172
3.5.122 SET-ATTR-CONT: Set Attribute Control	3-173
3.5.123 SET-ATTR-ENV: Set Attribute Environment	3-174
3.5.124 SET-PMMODE-<STS_PATH>: Set Performance Mode of PM Data Collection (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)	3-175
3.5.125 SET-TH-<MOD2>: Set Threshold (DS1, EC1, OC3, OC12, OC48, OC192, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)	3-176
3.5.126 SET-TOD: Set Time of Day	3-176
3.5.127 SW-DX-EQPT: Switch Duplex Equipment	3-177
3.5.128 SW-TOPROTN-EQPT: Switch to Protection Equipment	3-178
3.5.129 SW-TOWKG-EQPT: Switch to Working Equipment	3-180

CHAPTER 4**TL1 Command Components 4-1**

4.1 TL1 Default Values	4-1
4.1.1 BLSR	4-1
4.1.2 Cross Connections	4-1
4.1.3 Environmental Alarms and Controls	4-2
4.1.4 Equipment	4-2
4.1.5 Performance	4-2
4.1.6 Ports	4-3
4.1.7 SONET Line Protection	4-4
4.1.8 STS and VT Paths	4-4
4.1.9 Synchronization	4-5
4.2 Access Identifiers	4-5
4.2.1 ALL	4-5
4.2.2 CrossConnectID	4-7
4.2.3 PRSLOT	4-8
4.2.4 BITS	4-9
4.2.4.1 BITS for ONS 15454	4-9
4.2.4.2 BITS for ONS 15327	4-9
4.2.5 BLSR	4-9
4.2.5.1 BLSR for ONS 15454	4-9

4.2.5.2 BLSR for ONS 15327	4-10
4.2.6 DS1	4-10
4.2.7 ENV	4-10
4.2.7.1 ENV for ONS 15454	4-10
4.2.7.2 ENV for ONS 15327	4-10
4.2.8 EQPT	4-11
4.2.8.1 EQPT for ONS 15454	4-11
4.2.8.2 EQPT for ONS 15327	4-11
4.2.9 FACILITY	4-11
4.2.9.1 FACILITY for ONS 15454	4-11
4.2.9.2 FACILITY for ONS 15327	4-12
4.2.10 STS	4-12
4.2.10.1 STS for ONS 15454	4-12
4.2.10.2 STS for ONS 15327	4-13
4.2.11 SYN	4-14
4.2.11.1 SYN for ONS 15454	4-14
4.2.11.2 SYN for ONS 15327	4-14
4.2.12 SYN_SRC	4-14
4.2.12.1 SYN_SRC for ONS 15454	4-14
4.2.12.2 SYN_SRC for ONS 15327	4-15
4.2.13 SYNC_REF	4-15
4.2.13.1 SYNC_REF for ONS 15454	4-15
4.2.13.2 SYNC_REF for ONS 15327	4-16
4.2.14 SYNC_SW	4-16
4.2.14.1 SYNC_SW for ONS 15454	4-16
4.2.14.2 SYNC_SW for ONS 15327	4-16
4.2.15 TAP	4-17
4.2.15.1 TAP for ONS 15454	4-17
4.2.15.2 TAP for ONS 15327	4-17
4.2.16 VT1_5	4-17
4.2.16.1 VT1_5 for ONS 15454	4-17
4.2.16.2 VT1_5 for ONS 15327	4-18
4.3 Parameter Types	4-18
4.3.1 ATAG Description	4-18
4.3.2 CTAG Description	4-18
4.3.3 TID Description	4-18
4.3.4 Parameter Notes	4-19

CHAPTER 5

Ring Provisioning **5-1**

5.1	UPSR Topology	5-1
5.2	UPSR Cross-Connections	5-1
5.3	Ring-to-Ring Interconnection	5-2
5.3.1	Sample UPSR to UPSR Connection	5-3
5.3.2	Sample UPSR to Two-Fiber BLSR Connection	5-4
5.3.3	Sample Two-Fiber BLSR to UPSR Connection	5-5
5.3.4	Sample Two-Fiber BLSR to Two-Fiber BLSR Connection	5-6
5.3.5	Sample Two-Fiber BLSR to Four-Fiber BLSR Connection (ONS 15454)	5-7
5.3.6	Sample UPSR to Four-Fiber BLSR Connection (ONS 15454)	5-8
5.4	1WAY Drop and Continue	5-9
5.4.1	Sample Node 1 Configuration (Source Node)	5-9
5.4.2	Sample Node 2 Configuration (Drop and Continue Node)	5-10
5.4.3	Sample Node 3 Configuration (Destination Node)	5-10

CHAPTER 6

TL1 Performance Monitoring **6-1**

6.1	Performance Monitoring by Card	6-1
6.2	PM Parameters by Line Type	6-6

CHAPTER 7

TL1 Alarms and Errors **7-1**

7.1	Alarms	7-1
7.1.1	AIP	7-2
7.1.2	BITS	7-2
7.1.3	BPLANE	7-3
7.1.4	DS1	7-3
7.1.5	DS3	7-3
7.1.6	E1000F	7-4
7.1.7	E100(T)	7-4
7.1.8	EC1-12	7-4
7.1.9	ENVALRM	7-4
7.1.10	EQPT	7-5
7.1.11	EXT-SREF	7-6

7.1.12 FAN	7-6
7.1.13 G1000	7-7
7.1.14 NE	7-7
7.1.15 NE-SREF	7-8
7.1.16 OCN	7-8
7.1.17 STSMON	7-9
7.1.18 STSTRM	7-10
7.1.19 VT-MON	7-10
7.1.20 VT-TERM	7-10
7.2 Errors	7-11
7.3 Echo	7-16

About This Manual

This section explains who should read the *Cisco ONS 15454 and Cisco ONS 15327 TL1 Command Guide*, how the document is organized, related documentation, document conventions, how to order print and CD-ROM documentation, and how to obtain technical assistance.

Audience

This guide is for Cisco ONS 15454 and Cisco ONS 15327 technicians and administrators who are responsible for installing, configuring, maintaining, and enhancing ONS 15454 and ONS 15327 networks.

Organization

Chapter	Description
Chapter 1, “Getting Started”	Explains how to gain access to TL1, command syntax, autonomous messages, provision a DS3E card in CTC using TL1, security level privileges associated with each command, command completion behavior and test access configurations.
Chapter 2, “TL1 Gateway”	Describes the TL1 Gateway and provides procedures and examples for implementing TL1 Gateway on a four node ring.
Chapter 3, “TL1 Command Descriptions”	Lists TL1 commands by category and then lists each command and autonomous message supported by the ONS 15454 and the ONS 15327.
Chapter 4, “TL1 Command Components”	Describes the components of TL1 commands including, default values, access identifiers (AIDs), and parameter types.
Chapter 5, “Ring Provisioning”	Provides sample procedures for setting up STS or VT circuits over existing unidirectional path switched ring (UPSR) and bidirectional line switch ring (BLSR) configurations.

Related Documentation

Chapter	Description
Chapter 6, “TL1 Performance Monitoring”	Provides TL1 performance monitoring (PM) information.
Chapter 7, “TL1 Alarms and Errors”	Lists TL1 alarms and errors supported by the ONS 15454 and the ONS 15327 including descriptions and severity.

Conventions

The following conventions are used throughout this publication:

**Note**

Means reader take note. Notes contain helpful suggestions or useful background information.

**Caution**

Means reader be careful. In this situation, you might do something that could result in equipment damage or loss of data.

**Warning**

Means reader be careful. In this situation, you might do something that could result in harm to yourself or others.

**Tip**

Means the information might help you solve a problem.

Convention	Definition
Telcordia	Replaces all instances of Bellcore, the former name of Telcordia Technologies, Inc.
Cisco Transport Controller (CTC)	Replaces all instances of Cerent Management System (CMS)
Bold	Denotes icons, buttons, or tabs that the user must select
>	Used to separate consecutive actions; for example, “click the Maintenance > Protection > Ring tabs”
Procedure:	Precedes all procedures; a horizontal line indicates the end of each procedure

Obtaining Documentation

The following sections explain how to obtain documentation from Cisco Systems.

World Wide Web

You can access the most current Cisco documentation on the World Wide Web at the following URL:

<http://www.cisco.com>

Translated documentation is available at the following URL:

http://www.cisco.com/public/countries_languages.shtml

Documentation CD-ROM

Cisco documentation and additional literature are available in a Cisco Documentation CD-ROM package, which is shipped with your product. The Documentation CD-ROM is updated monthly and may be more current than printed documentation. The CD-ROM package is available as a single unit or through an annual subscription.

Ordering Documentation

Cisco documentation is available in the following ways:

- Registered Cisco Direct Customers can order Cisco product documentation from the Networking Products MarketPlace:
http://www.cisco.com/cgi-bin/order/order_root.pl
- Registered Cisco.com users can order the Documentation CD-ROM through the online Subscription Store:
<http://www.cisco.com/go/subscription>
- Nonregistered Cisco.com users can order documentation through a local account representative by calling Cisco corporate headquarters (California, USA) at 408 526-7208 or, elsewhere in North America, by calling 800 553-NETS (6387).

Documentation Feedback

If you are reading Cisco product documentation on Cisco.com, you can submit technical comments electronically. Click **Leave Feedback** at the bottom of the Cisco Documentation home page. After you complete the form, print it out and fax it to Cisco at 408 527-0730.

You can e-mail your comments to bug-doc@cisco.com.

To submit your comments by mail, use the response card behind the front cover of your document, or write to the following address:

Cisco Systems
 Attn: Document Resource Connection
 170 West Tasman Drive
 San Jose, CA 95134-9883

We appreciate your comments.

Obtaining Technical Assistance

Cisco provides Cisco.com as a starting point for all technical assistance. Customers and partners can obtain documentation, troubleshooting tips, and sample configurations from online tools by using the Cisco Technical Assistance Center (TAC) Web Site. Cisco.com registered users have complete access to the technical support resources on the Cisco TAC Web Site.

Cisco.com

Cisco.com is the foundation of a suite of interactive, networked services that provides immediate, open access to Cisco information, networking solutions, services, programs, and resources at any time, from anywhere in the world.

Cisco.com is a highly integrated Internet application and a powerful, easy-to-use tool that provides a broad range of features and services to help you to

- Streamline business processes and improve productivity
- Resolve technical issues with online support

- Download and test software packages
- Order Cisco learning materials and merchandise
- Register for online skill assessment, training, and certification programs

You can self-register on Cisco.com to obtain customized information and service. To access Cisco.com, go to the following URL:

<http://www.cisco.com>

Technical Assistance Center

The Cisco TAC is available to all customers who need technical assistance with a Cisco product, technology, or solution. Two types of support are available through the Cisco TAC: the Cisco TAC Web Site and the Cisco TAC Escalation Center.

Inquiries to Cisco TAC are categorized according to the urgency of the issue:

- Priority level 4 (P4)—You need information or assistance concerning Cisco product capabilities, product installation, or basic product configuration.
- Priority level 3 (P3)—Your network performance is degraded. Network functionality is noticeably impaired, but most business operations continue.
- Priority level 2 (P2)—Your production network is severely degraded, affecting significant aspects of business operations. No workaround is available.
- Priority level 1 (P1)—Your production network is down, and a critical impact to business operations will occur if service is not restored quickly. No workaround is available.

Which Cisco TAC resource you choose is based on the priority of the problem and the conditions of service contracts, when applicable.

Cisco TAC Web Site

The Cisco TAC Web Site allows you to resolve P3 and P4 issues yourself, saving both cost and time. The site provides around-the-clock access to online tools, knowledge bases, and software. To access the Cisco TAC Web Site, go to the following URL:

<http://www.cisco.com/tac>

All customers, partners, and resellers who have a valid Cisco services contract have complete access to the technical support resources on the Cisco TAC Web Site. The Cisco TAC Web Site requires a Cisco.com login ID and password. If you have a valid service contract but do not have a login ID or password, go to the following URL to register:

<http://www.cisco.com/register/>

If you cannot resolve your technical issues by using the Cisco TAC Web Site, and you are a Cisco.com registered user, you can open a case online by using the TAC Case Open tool at the following URL:

<http://www.cisco.com/tac/caseopen>

If you have Internet access, it is recommended that you open P3 and P4 cases through the Cisco TAC Web Site.

Cisco TAC Escalation Center

The Cisco TAC Escalation Center addresses issues that are classified as priority level 1 or priority level 2; these classifications are assigned when severe network degradation significantly impacts business operations. When you contact the TAC Escalation Center with a P1 or P2 problem, a Cisco TAC engineer will automatically open a case.

To obtain a directory of toll-free Cisco TAC telephone numbers for your country, go to the following URL:

<http://www.cisco.com/warp/public/687/Directory/DirTAC.shtml>

- Before calling, please check with your network operations center to determine the level of Cisco support services to which your company is entitled; for example, SMARTnet, SMARTnet Onsite, or Network Supported Accounts (NSA). In addition, please have available your service agreement number and your product serial number.

Getting Started

Transaction Language 1 (TL1) is a subset of the input and output messages contained in the International Telecommunications Union (ITU) Man-Machine Language (MML). TL1 provides a standard set of messages that can be used for communicating between operating systems and network elements, and personnel and network elements. The ONS 15454 and ONS 15327 can support up to 20 concurrent TL1 sessions in this release. For more information about TL1, refer to Telcordia document GR-833-CORE, *Network Maintenance: Network Element and Transport Surveillance Messages*.

This chapter provides information and procedures for getting started with TL1:

- Setting up TL1 communication
- TL1 command syntax
- Autonomous messages
- TL1 commands by user security
- Provisioning a DS3E card in CTC using TL1
- Mixed mode timing support
- TL1 command completion behavior
- Test access

1.1 Setting up TL1 Communication

The period during which a user is logged into the ONS 15454 or ONS 15327 is called a session. There are three options you can use to open a session (login):

- Cisco Transport Controller (CTC)
- Telnet
- Craft interface

When you logout of any of these options, you are closing a session.

The ONS 15454 and ONS 15327 allow a maximum of 20 concurrent TL1 sessions using any one or any combination of the options listed above. For information on issuing commands to multiple nodes, see Chapter 2, “TL1 Gateway.”

1.1.1 Open a TL1 session

Use the following procedures to open a TL1 session via the CTC, telnet, or craft interface. In the procedures the Activate and Cancel User commands are shown in their input format. For more information about these and other commands and messages, see Chapter 3, “TL1 Command Descriptions.”

Procedure: Open a TL1 Session Via the CTC

-
- Step 1** Open a browser program (Netscape or Internet Explorer) and type the address of the node you want to communicate with.
 - Step 2** Log into the CTC. The IP address at the title bar should match the IP address of the node you want to communicate with.
 - Step 3** Once logged into the CTC, click **Tools > Open TL1 Connection**.
 - Step 4** From the Select Node dialog box, choose the node you want to communicate with.
 - Step 5** Click **OK**.
A TL1 interface window opens. There are three sub-windows in the TL1 interface window: Request history, Message log, and TL1 request. Type commands in the TL1 request window. You will see responses in the Message log window. The Request history window allows you to recall previous commands by clicking on them.
 - Step 6** Verify that the Connect button is selected (grayed out).
 - Step 7** Type the Activate User command in the TL1 request window to open a TL1 session:
ACT-USER:[<TID>]:<UID>:<CTAG>::<PID>; and press **Enter**.

Note You must press Enter after the semicolon in each TL1 command, or the command will not be executed.

- Step 8** Type the Cancel User command in the TL1 request window or press the **Disconnect** button to close a TL1 session:
CANC-USER:[<TID>]:<USERID>:<CTAG>; and press **Enter**.
-

Procedure: Open a TL1 Session Via Telnet

To access TL1 commands in a telnet session over a craft interface or a LAN connection (TCC+ front panel or backplane pins) you can choose from several ports. Port number 3082 is a raw TCP/IP port; it will not echo and it will not prompt the user. Port number 3083 is a telnet port that uses the telnet protocol and associated telnet escape sequences. Port number 2361 is supported for backward compatibility with earlier releases and has the same behavior as Port 3083 (telnet port). The following procedure is for use on PCs with a Windows operating system.

-
- Step 1** At the DOS prompt, type **cmd** and click **OK**. (The same steps can also be done from a Unix prompt).
 - Step 2** At the DOS command prompt type:
TELNET <NODE IP ADDRESS OR NODE NAME> <PORT NUMBER> and press **Enter**.

The Node IP address or Node Name refers to the IP address or Node Name of the node you want to communicate with. Port number is the port (2361, 3082, or 3083) where TL1 commands are understood. If the connection is successful, a screen opens with a prompt.

- Step 3** Type the Activate User command to open a TL1 session:

ACT-USER:[<TID>]:<UID>:<CTAG>::<PID>;

Note When the semicolon is typed, the command is executed immediately.

- Step 4** Type the Cancel User command to close a TL1 session:

CANC-USER:[<TID>]:<USERID>:<CTAG>;

Procedure: Open a TL1 Session Via Craft Interface

The TCC+/XTC has two built-in interface ports for accessing the ONS 15454. With one RJ-45 LAN connection you can access the system using a standard browser interface. In the browser interface, you can perform local and remote Operations, Administration, Maintenance, and Provisioning (OAM&P) functions and open a VT100 emulation window to enter TL1 commands. If a browser is not available, you can access the system using a nine-pin RS-232 port. The RS-232 port supports VT100 emulation such that TL1 commands may be entered directly without a browser.

- Step 1** Connect the serial cable to the RS-232 port on the active TCC+/XTC card.

- Step 2** Configure the terminal emulation software (Hyperterminal):

- a. Terminal emulation = vt100
- b. Bits per second = 9600
- c. Parity = None
- d. Stop BITS = 1
- e. Flow control = None

- Step 3** Press **Enter**. An angle bracket prompt (>) appears.

- Step 4** At the > prompt, type the Activate User command to open a TL1 session:

ACT-USER:[<TID>]:<UID>:<CTAG>::<PID>;

Note When the semicolon is typed, the TL1 command is executed immediately.

- Step 5** Type the Cancel User command to close a TL1 session:

CANC-USER:[<TID>]:<USERID>:<CTAG>;

1.2 TL1 Command Syntax

TL1 commands conform to the following syntax:

a:b:c:d:e: ... z;

where:

“a” is the command code

“b” is the target identifier (TID)

“c” is the access identifier (AID) or the user identifier (UID)

“d” is the correlation tag (CTAG)

“e: ... z;” are other positions required for various commands

The TID, AID, and CTAG route and control the TL1 command. Other parameters provide additional information required to complete the action requested by the command. TL1 command codes, parameter names and parameter values can be either uppercase or lowercase exclusively or any combination of the two, unless specifically noted in the command description.

The TID is a unique name given to each system when it is installed. The name identifies the particular NE (in this case, the ONS 15454 or ONS 15327), to which each command is directed. Each TID can have a maximum of 20 ASCII characters limited to letters, digits, and hyphens, but each TID must start with an alphabetic character. The presence of the TID is required in all input commands, but its value can be null (represented by two successive colons). The TID can be null when the operating system directly communicates with the target NE. The recommended value for the TID, when it is used, is the target’s CLLI code. To establish the TID for an ONS 15454/15327 node, use the Provisioning > General tabs in CTC.

Note

If the TID contains any characters other than letters and digits, such as spaces, the text string form (enclosed in double quotes) must be used.

The AID is an access code used to identify and address specific objects within the ONS 15454/ONS 15327. These objects include individual pieces of equipment, transport spans, access tributaries, and other objects.

The CTAG is a unique identifier given to each input command by the operator. When the ONS 15454/ONS 15327 system responds to a specific command, it includes the command’s CTAG in the reply. Including the CTAG eliminates discrepancies about which response corresponds to which command. Valid CTAG values include strings of up to six characters comprised of identifiers (alphanumeric, beginning with a letter) or decimal numerals (a string of decimal digits with an optional non-trailing “.”).

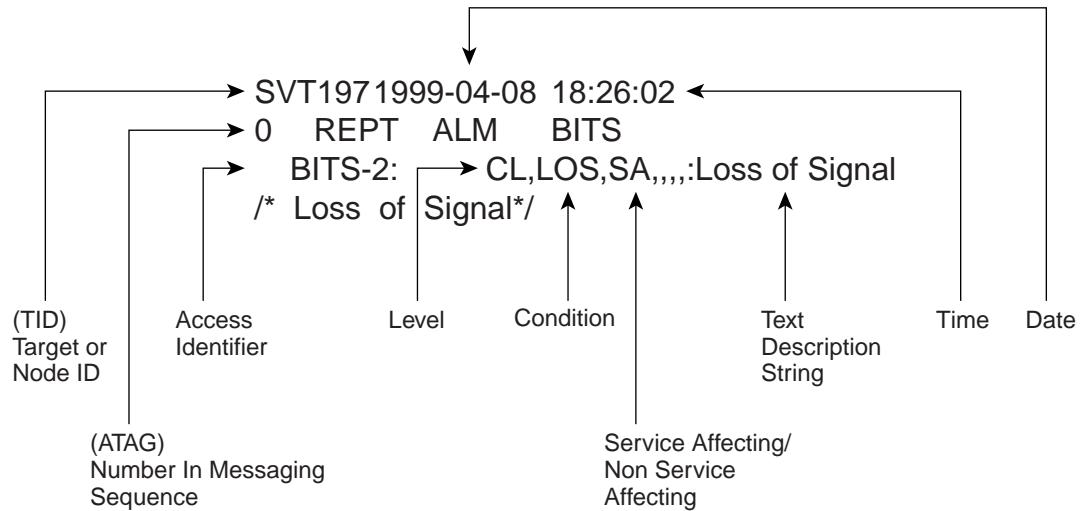

The following specification characters are used throughout this document as a vehicle for defining the syntax:

- <> enclose a symbol specifier, for example <CTAG>.
- [] enclose an optional symbol, for example [<TID>].
- “ ” enclose a literal character, for example an output format “SLOT-7:PLUGIN,TC,,,,,:\\“EQUIPMENT PLUG-IN\\”,TCC”
- ^ is a space, a literal blank character used only in examples of messages.

1.3 Autonomous Messages

The autonomous TL1 messages are included in Chapter 3, “TL1 Command Descriptions” and listed alphabetically. Figure 1-1 shows the autonomous message format. The autonomous message tag (ATAG) is used for message sequencing. The number is incremented by one for each autonomous message sent by the ONS 15454 or ONS 15327. The ONS 15454 and ONS 15327 use whole numbers 0000 to 9999.

Figure 1-1 Autonomous message format

40398

1.3.1 Alarm Codes

The alarm code indicates the severity of the autonomous message. Valid values for alarm codes in decreasing order of severity are as follows:

- *C Critical alarm
- ** Major alarm
- *^ Minor alarm
- A^ Non-alarm message

Critical, Major, and Minor correspond to the reporting of alarmed events. The Non-alarm message designation is used when the NE is reporting non-alarmed events, periodic measurements, or results of previously-scheduled diagnostics or audits. If multiple alarms are reported in the same message, the alarm code is the highest severity of those being reported.

The following is an example of an output message that includes the Critical alarm code:

```

ab7-56 1970-01-01 16:02:10
*C 4 REPT ALM EQPT
“SYSTEM:CR,HITEMP,NSA,,,:“High Temperature\”,TCC”

```

For more information about alarms, see Chapter 7, “TL1 Alarms and Errors.”

1.4 TL1 Commands by User Security

The following table specifies command access privileges for each user security level.

Table 1-1 Command Access

Command	Superuser	Provisioning	Maintenance	Retrieve
DLT-USER-SECU	X			
ED-DAT	X			
ED-USER-SECU	X			
ENT-USER-SECU	X			
SET-TOD	X	X		
DLT-*-*	X	X		
ED-*-*	X	X		
ENT-*-*	X	X		
SET-*-*	X	X		
INIT-*-*	X	X	X	
OPR-*-*	X	X	X	
RLS-*-*	X	X	X	
RMV-*-*	X	X	X	
RST-*-*	X	X	X	
SW-*-*	X	X	X	
ALW-*-*	X	X	X	X
INH-*-*	X	X	X	X
REPT * *	X	X	X	X
RTRV-*-*	X	X	X	X
CANC-*-*	X	X	X	X
ACT-*-*	X	X	X	X
ED-PID	X	X	X	X

User security levels limit the amount of time a user can leave the system idle before the TL1 session is locked to prevent unauthorized users from making changes. Higher security levels have shorter idle times. Table 1-2 shows security levels and their idle times.

Table 1-2 Security Idle Times

Security Level	Idle Time
Retrieve	Unlimited
Maintenance	60 minutes
Provisioning	30 minutes
Superuser	15 minutes

1.5 Provisioning a DS3E Card in CTC Using TL1

The DS3E card can autosense the framing being received and set the framing accordingly; however, this framing autosense feature can only be set using CTC. Use CTC to set the FMT attribute on a DS3E card to autoprovision which results in the FMT field being blanked out for a few seconds while the DS3E card is determining the framing mode coming into that particular port. The FMT field is then set accordingly to unframed, M23, or CBit. If the DS3E card is not present (pre-provisioned), setting the FMT field to autoprovision will result in the FMT field defaulting to unframed.

The TL1 interface does not support the autoprovision option for the DS3E card; the TL1 interface only supports unframed, M23, or CBit. If autoprovision is selected from CTC and at the same time the TL1 command RTRV-T3 is issued, the TL1 output will result in the FMT field populated with unframed during the time period that the DS3E card (if present) is autosensing the frame format. If the DS3E card is not present (pre-provisioned), issuing RTRV-T3 after CTC sets the FMT to autoprovision will result in the TL1 output populating the FMT field with unframed.

1.6 Mixed Mode Timing Support

Although mixed mode timing is supported via TL1 in this release, Cisco strongly advises against its implementation. Mixed mode timing is not a recommended timing mode because of the inherent risk of creating timing loops. Refer to Telcordia document GR-436-CORE, *Digital Network Synchronization Plan* for recommended synchronization planning. Refer to the *Cisco ONS 15454 Procedure Guide* or the *Cisco ONS 15327 User Documentation* for information about setting up ONS 15454/15327 timing. For further assistance contact the Cisco Technical Assistance Center (TAC) at www.cisco.com or call 1-877-323-7368 for unresolved problems.

1.7 TL1 Command Completion Behavior

1.7.1 General Rules

Note The command completion behavior does not apply to RTRV-CRS, RTRV-ALM, and RTVR-COND commands.

1.7.1.1 Explicit List of AIDs - No Wildcards

If a set of AIDs is explicitly listed, including a set of just one AID, then each AID must complete successfully to return a CMPLD message. If more than one AID is in the set and at least one AID succeeds but all do not, then a PRTL with errors for each failed AID is returned. If all AIDs in the set fail, a DENY with errors for each failed AID is returned.

SLOT-1
FAC-2-1&FAC-3-3&FAC-4-2

1.7.1.2 Implicit List of AIDs - Single AID With Wildcard

If a set of AIDs is implied by the use of the ALL modifier on a single AID, then follow the same rules as in the “Explicit List of AIDs - No Wildcards” section on page 1-7. The caveat is that the implicit list only includes AIDs that apply to the command.

SLOT-ALL
FAC-1-ALL
STS-3-ALL

where Slot 3 contains an OC-12 and the command is ED-STS1 but STS-3-4 and STS-3-7 are STS3C. The set implied by STS-3-ALL then only contains STS-3-{1,2,3,10,11,12} and will not return an error for STS-3-{4,5,6,7,8,9}. Disregard the STS3C in this case because the modifier of the command specifies that the user is only interested in STS-1 paths. The rule specified in this section then applies to the implicit set of {1,2,3,10,11,12}.

1.7.1.3 Explicit List Grouped With Implicit List

If the set of AIDs is comprised of two subsets, one set including explicitly stated AIDs and the other set implied by one or more AID(s) with the ALL modifier, then follow the rules of the “Explicit List of AIDs - No Wildcards” section on page 1-7 and the “Implicit List of AIDs - Single AID With Wildcard” section on page 1-8, respectively.

FAC-1-1&FAC-2-ALL
FAC-3-ALL&FAC-7-ALL
STS-2-ALL&STS-12-1&STS-13-2&STS-14-ALL

1.7.2 Retrieval of Cross Connections

1.7.2.1 Explicit List of AIDs - No Wildcards

For an explicit list of AIDs on a RTRV-CROSS-CONNECTION, an error code will be returned for each AID that fails validation (e.g. the user specifies STS-N-13 when SLOT-N only contains an OC-12) or for each AID where no matching cross-connection is found. To determine the completion code, follow the rules from the “Explicit List of AIDs - No Wildcards” section on page 1-7. If the result is either PRTL or CMPLD, then a list of matching cross-connections will accompany the response.

1.7.2.2 Implicit List of AIDs - Single AID With Wildcard

If a set of AIDs is implied by the use of the ALL modifier on a single AID, then follow the same AID expansion rule as defined in the example from the “Implicit List of AIDs - Single AID With Wildcard” section on page 1-8. Then apply the following rules to the set:

1. If all valid AIDs match, CMPLD is returned with a matching list of cross-connections.
2. If some valid AIDs match but not all, CMPLD is returned with a matching list of cross-connections.
3. If all valid AIDs fail to match, DENY is returned.

RTRV-CRS-STS1:[<TID>]:STS-9-ALL:<CTAG>;

where STS-9-ALL maps to STS-9-{1,2,3,10,11,12} because there is a single-port OC-12 card in Slot 3 with STS-3C defined for STS-9-4 and STS-9-7. You then traverse the set and return only the STS1 cross-connections that exist using end points in that set. If no cross-connections are retrieved, CMPLD is returned.

1.7.2.3 Explicit List Grouped With Implicit List

When you have determined the implicit list, apply the rules from the “Implicit List of AIDs - Single AID With Wildcard” section on page 1-8 to the implicit list and the rules from the “Explicit List of AIDs - No Wildcards” section on page 1-8 to the explicit list. Apply the following logic to the results from the two subsets:

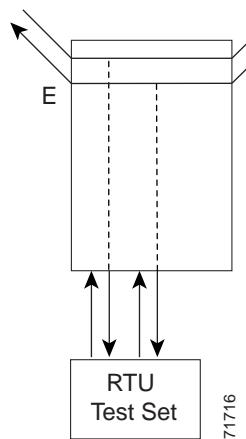

1. Explicit list returns CMPLD, implicit list returns CMPLD, return CMPLD plus matching list
2. Explicit list returns CMPLD, implicit list returns DENY, return PRTL with errors plus matching list
3. Explicit list returns PRTL, implicit list returns CMPLD, return PRTL with errors plus matching lists
4. Explicit list returns PRTL, implicit list returns DENY, return PRTL with errors plus matching list
5. Explicit list returns DENY, implicit list returns CMPLD, return PRTL with errors plus matching list
6. Explicit list returns DENY, implicit list returns DENY, return DENY with errors

1.8 Test Access

TL1 Test Access enables you to monitor and test circuits. Commands to connect, disconnect, and change the test access (TACC) and test access connections have been added to TL1 starting with ONS 15454 R3.0. This section includes test access configurations, mode definitions, split access modes, and loop modes. You can view test access information in CTC; in node view click the **Maintenance > Test Access** tabs.

Refer to Telcordia document GR-834-CORE, *Network Maintenance: Access and Testing* and GR-1402-CORE, *Network Maintenance: Access Testing - DS3 HCDS TSC/RTU and DTAU Functional Requirements* for more information about Test Access. See Chapter 3, “TL1 Command Descriptions” for TL1 command information.

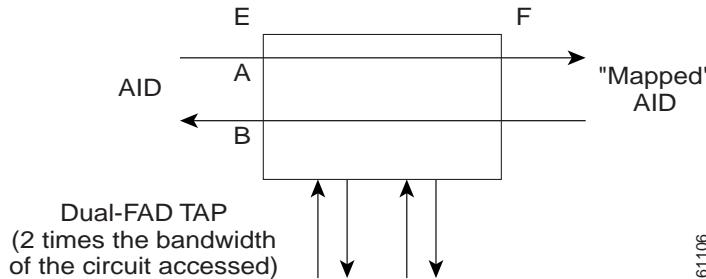

Figure 1-2 Single node view (Node 1)

1.8.1 Mode Definitions

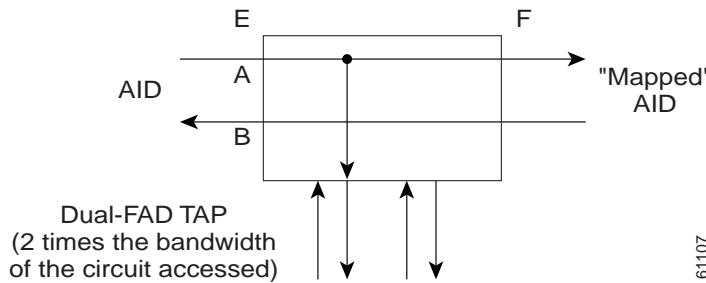

Figure 1-3 through Figure 1-6 show what the different <MD> test access modes refer to. The following descriptions are taken from GR-834-CORE, section 6-4.

Figure 1-3 Circuit with no access

61106

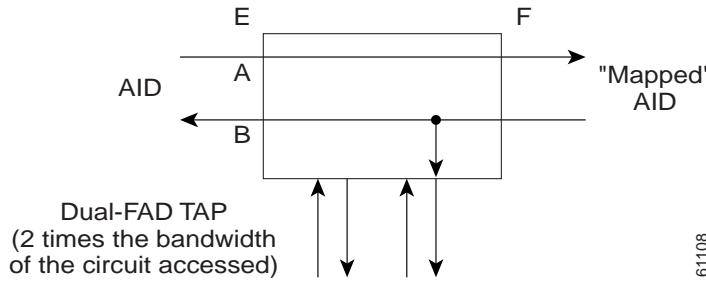

Figure 1-4 Monitor E (MONE) access

61107

MONE indicates that a monitor connection is to be provided from the FAD to the A transmission path of the accessed circuit.

Figure 1-5 Monitor F (MONF) access

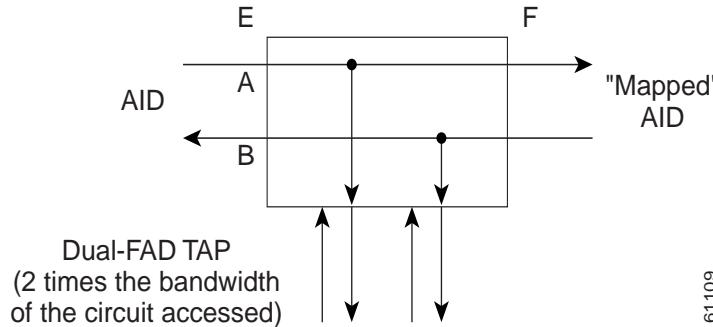

61108

MONF indicates that the FAD is providing a monitor connection to the B transmission path of the accessed circuit.

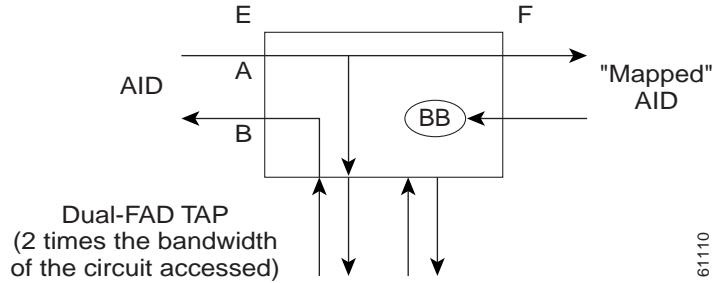

Note The MONE and SPLTA modes are applicable to unidirectional circuits from E to F. The MONF and SPLTB modes are applicable to unidirectional circuits from F to E.

Figure 1-6 Monitor EF (MONEF) access

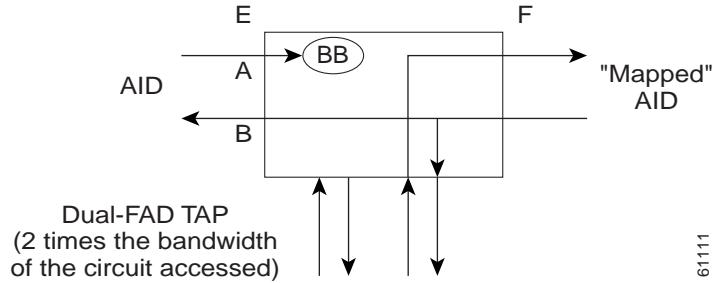

MONEF for T3 (DS3 HCDS) indicates that the odd pair of a FAP is providing a monitor connection to the A transmission path and from the even pair of a FAP to the B transmission path of the accessed circuit.

1.8.2 Split E and F Access Modes

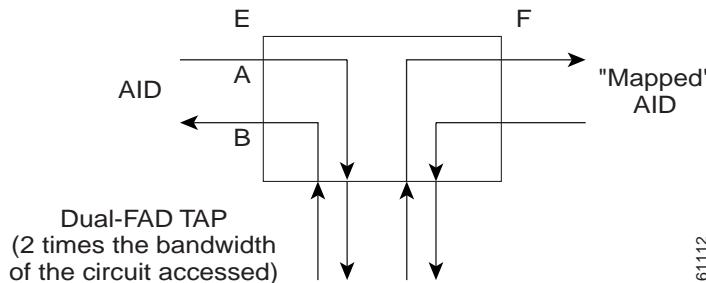

Figure 1-7 through 1-9 show split E and F access modes.

Figure 1-7 Split E (SPLTE) access

SPLTE indicates to split both the A and B paths and connect the E side of the accessed circuit to the FAD.

Figure 1-8 Split F (SPLTF) access

SPLTF indicates to split both the A and B paths and connect the F side of the accessed circuit to the FAD.

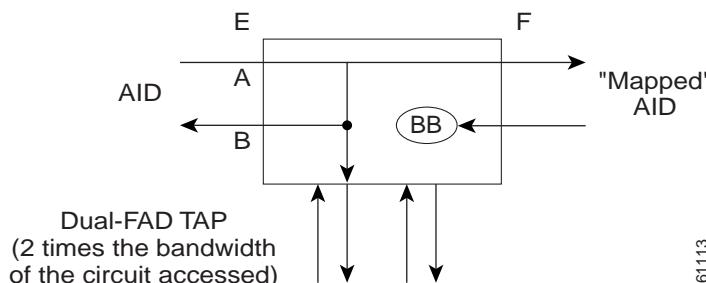

Figure 1-9 Split EF (SPLTEF) access

61112

SPLTEF for T1 (DS1 HCDS) indicates to split both the A and B paths, connect the E side of the accessed circuit to FAD1 and the dual facility access digroup (DFAD) pair, and connect the F side to the FAD2 of the same DFAD pair. SPLTEF for T3 (DS3 HCDS) indicates to split both the A and B paths and connect the E side of the accessed circuit to the odd pair of the FAP and the F side to the even pair of the FAP.

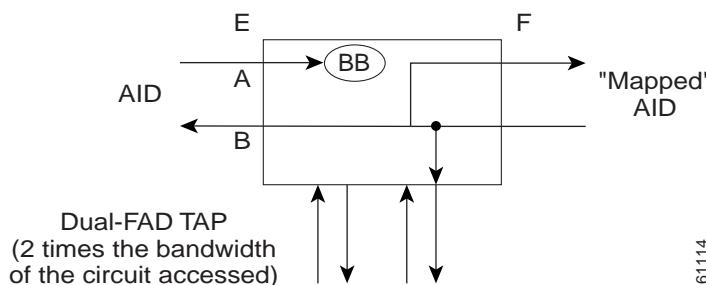

1.8.3 Loop E and F Modes

Loop E and F modes are basically identical to the SPLT E and F modes except that the outgoing signal is the incoming signal and not the signal from the remote test unit (RTU).

Figure 1-10 LOOPE access

61113

LOOPE indicates to split both the A and B paths, connect the incoming line from the E direction to the outgoing line in the E direction, and connect this looped configuration to the FAD.

Figure 1-11 LOOPF access

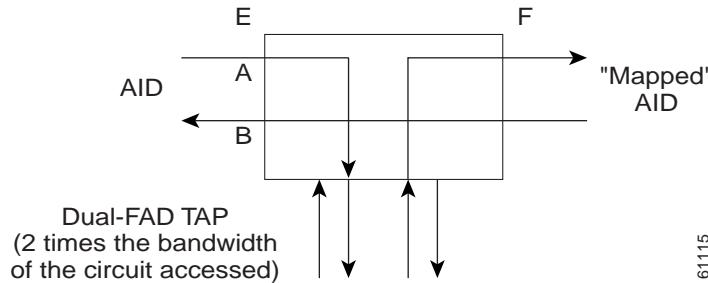

61114

LOOPF indicates to split both the A and B paths, connect the incoming line from the F direction to the outgoing line in the F direction and connect this looped configuration to the FAD.

1.8.4 Split A and B Access Modes

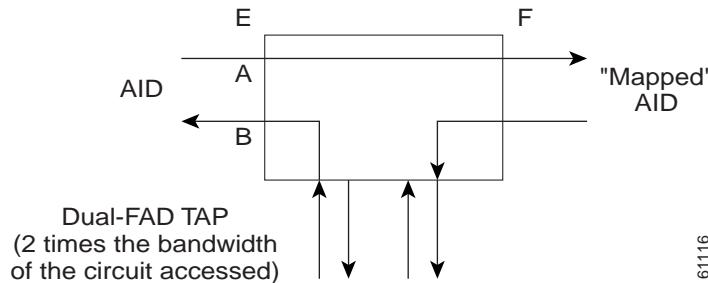

Split A and B access modes are shown in Figure 1-12 and Figure 1-13. These modes are similar to the Split E and F modes, except the signals are sent to the RTU, not the NE signal configuration.

Figure 1-12 SPLTA access

SPLTA indicates that a connection is provided from both the E and F sides of the A transmission path of the circuit under test to the FAD and split the A transmission path.

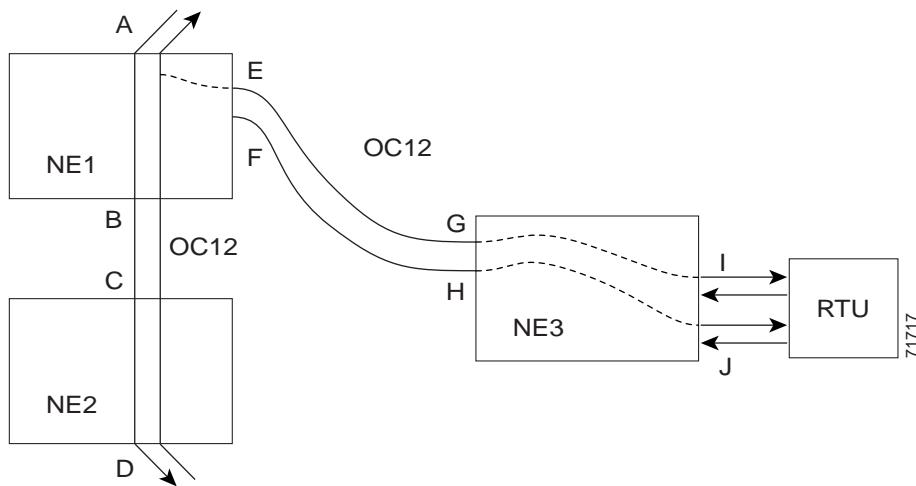

Figure 1-13 SPLTB access

SPLTB indicates that a connection is provided from both the E and F sides of the B transmission path of the circuit under test to the FAD and split the B transmission path.

1.8.5 Creating Test Access Points

Figure 1-14 Multi-node view (MONE example)

Example 1-1 ED-STS1:NE1:STS-1-1:TACC=4;

This command creates a test access point (TAP) with STS-1-1 and STS-1-2 through NE1. The TAP number assigned is four.

1.8.6 Connecting Test Access Points

Example 1-2 ENT-CRS-STS1:NE3:<AID I-G>:100::2WAY;

This command is a connection, not a TAP. <CTAG> is 100.

Example 1-3 ENT-CRS-STS1:NE3:<AID J-H>:101::2WAY;

This command is a second connection, not a TAP.

Assuming the path from A to B is already entered, the A and B points in Figure 1-14 refer to entry and exit points on the node or different cards. The E/F designators refer to the two 2-way connections from NE3.

Example 1-4 CONN-TACC-STS1:NE1:<AID A or B>:102::4:<MONE>;

This command connects the TAP number four to the circuit.

The I and J connections would be TAPs in Figure 1-2, but normal connections in Figure 1-14. CTC will not present TAPs as parts of circuits. TAPs will be displayed on the node-level Maintenance/Test Access Tab. This tab helps to avoid confusion when a connection can be treated one way under TL1 but another way in CTC.

**Note**

The <AID> provided designates the E side and the other automatically becomes the F side. Once a CONN-TACC is set up, these designations cannot change until a DISC-TACC or another CONN-TACC command is executed. The connection is based on the <AID> supplied.

1.8.7 Changing Test Access Modes

The command to change a TACC mode is:

Example 1-5 CHG-ACCMD-STS1:CISCO:8:123::MONF;

This command changes the test access mode for the circuit under test. This may be a change from monitoring the data to inserting data into the STS. This command can only be applied to an existing TAP connection. STS192c is not supported for Cisco ONS 15327.

1.8.8 Disconnecting Test Access Modes

TAPs can be disconnected in the following ways:

- Issue the DISC-TACC command
- Delete or modify accessed connection
- Drop the TL1 session for any reason, including logout or a dropped telnet session
- Switch or reset a TCC+/XTC

1.8.9 Deleting Test Access Points

The command to delete a TAP is:

Example 1-6 ED-<STS_PATH>:[<[TID]>:<AID>:<CTAG>:::TACC=0;;

**Note**

The TACC number must be set to zero in order to delete a TAP.

**Note**

If a TAP is not removed the STS bandwidth will be stranded.

■ Test Access

TL1 Gateway

This chapter describes the TL1 Gateway and provides procedures and examples for implementing TL1 Gateway on the ONS 15454.

Note

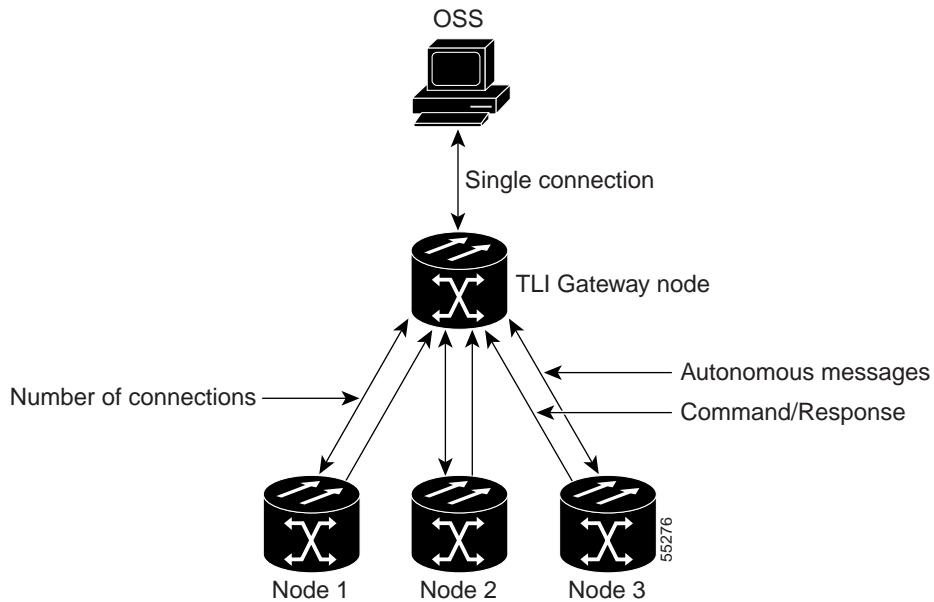

TL1 Gateway is supported for the Cisco ONS 15454 only.

2.1 Gateway Network Element Topology

You can issue TL1 commands to multiple nodes via a single connection through the TL1 Gateway. Any node can serve as a Gateway Network Element (GNE), End-Point Network Element (ENE), or Intermediate Network Element (INE). A node becomes a GNE when a TL1 user connects to it and enters a command destined for another node. An ENE is an end node because it processes a TL1 command that is passed to it from another node. An INE is an intermediate node because of topology; it has no special hardware, software, or provisioning.

To implement the TL1 Gateway, use the desired ENE's TID in the ACT-USER command at any node. You do not need to establish a TL1 session on the GNE. From the GNE, you can access several remote nodes which become the ENEs. The ENEs are the message destinations or origins. The INE handles the DCC TCP/IP packet exchange.

The GNE Session is the connection that multiplexes TL1 messages between the OSS/craftsperson and the GNE. The GNE demultiplexes incoming operations support system (OSS) TL1 commands and forwards them to the remote ENE. The GNE also multiplexes incoming responses and autonomous messages to the GNE Session. The ENE Session is the connection that exchanges messages between the GNE and the remote ENE. Figure 2-1 shows the GNE topology.

Figure 2-1 Example of a GNE topology

Each GNE can support six (5+1) concurrent gateway communication sessions (connections from an OS to the GNE). Five of these sessions are via the LAN (wire-wrap, active TCC+ LAN port, or DCC) and the sixth session is reserved for the active TCC+ serial port.

On each gateway communication session a GNE can establish TL1 sessions to up to 31 additional DCC-connected nodes, for a total DCC of 32 nodes. Each GNE can handle 32 nodes and 6 concurrent communication gateway sessions, and the GNE can handle up to a maximum of 96 ENEs/GNE. You can dynamically distribute the ENEs to balance the number of concurrent gateway communication sessions versus the number of NEs on the DCC. The GNE treats the 6 (5+1) concurrent gateway communication sessions and 96 ENEs/GNE limit as a resource pool (Table 2-1) and continues to allocate resources until the pool is exhausted (see Table 2-2 for allocation examples). When the pool is exhausted the GNE returns an “All Gateways in Use” message or an “All ENE Connections in Use” message.

Table 2-1 Gateway Resource Pool

Number of GNEs	Number of GNE Sessions	Number of ENEs	Maximum Number of ENE sessions/GNE session
1	6 (5+1)	96 (dynamically allocated)	31

Table 2-2 Examples of a Single GNE Topology Showing How the GNE/ENE Resources can be Allocated

Number of GNE Communication Sessions	Maximum Number of ENEs
1	31
2	62
3	93
4	96

Number of GNE Communication Sessions	Number of ENEs
1	16
2	32
3	48
4	64
5	80
6	96

Note

Issuing commands to specific nodes in the network is accomplished by entering a unique node name in the TID field in each TL1 message. The TID field is synonymous with the name of the node and is the second token in a TL1 command.

2.2 Implementing TL1 Gateway

The following procedures demonstrate TL1 Gateway on a four-node ring (without TL1 Gateway in Figure 2-2 and with TL1 Gateway in Figure 2-3), where:

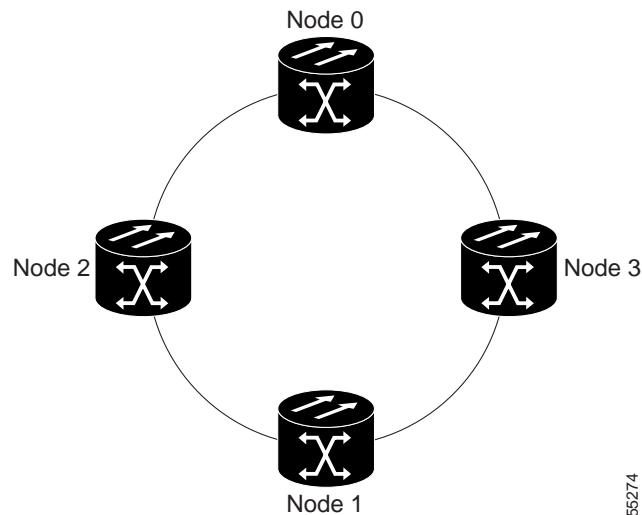

Node 0 is the gateway GNE.

Node 1 is the ENE 1.

Node 2 is the INE 2.

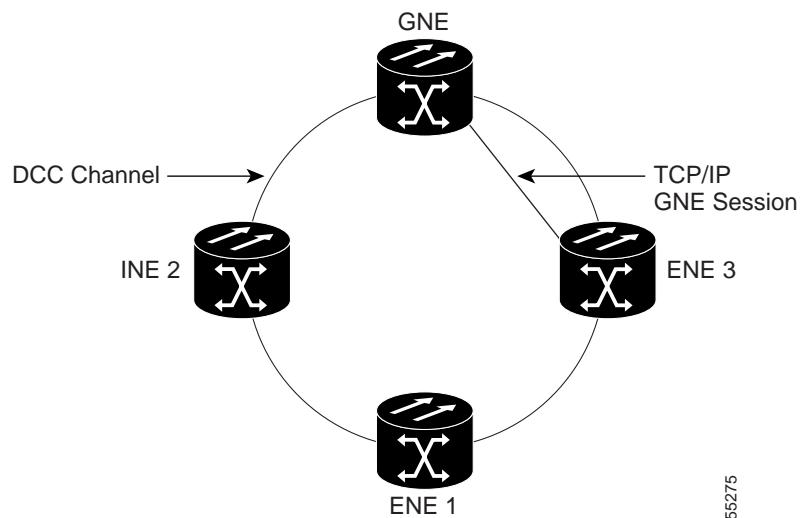

Node 3 is the ENE 3.

Figure 2-2 Four-node ring without TL1 Gateway

55274

Figure 2-3 Four-node ring with TL1 Gateway

55275

Log Into a Remote ENE

-
- Step 1** Telnet or serial port to Node 0, which will become the GNE.
 - Step 2** To connect to the ENE 1 node, enter the TL1 login command using the following input example:
ACT-USER:NODE1:USERNAME:1234:PASSWORD;
The GNE forwards the login to ENE 1. After successful login, ENE 1 sends a COMPLD response.
 - Step 3** When you are logged into ENE 1, enter the following TL1 login command to connect to ENE 3:
ACT-USER:NODE3:USERNAME:1234:PASSWORD;
The GNE forwards the login to ENE 3. After successful login, the ENE 3 sends a COMPLD response.
-

Forward Commands by Specifying the ENE TID (Node 1 or Node 3)

When you are logged into ENE 1 and ENE 3, enter a command and designate a specific TID, as shown in the following example:

RTRV-HDR:NODE1::1; will retrieve the header of Node 1 and
RTRV-HDR:NODE3::3; will retrieve the header of Node 3.

Receive Autonomous Messages from the Remote ENE

To receive autonomous messages from the remote ENE, you must log into the remote ENE. When you are logged in, you will start receiving autonomous messages. The source of the message is identified by the node TID as part of the message.

Log Out of a Remote ENE

To disconnect from a remote ENE, you must use the CANC-USER command as follows:

CANC-USER:NODE1:USERNAME:1; will disconnect ENE 1 and
CANC-USER:NODE3:USERNAME:3; will disconnect ENE 3.

The GNE forwards the logout to the remote ENEs. The GNE/ENE TCP session is closed.

TL1 Command Descriptions

This chapter provides specific information on TL1 commands and autonomous messages for the Cisco ONS 15454 and the Cisco ONS 15327, Release 3.3, including:

- TL1 commands by category
- TL1 commands by card
- TL1 commands, categories and cards
- TL1 commands

For information on command components, such as parameters, see Chapter 4, “TL1 Command Components.”

3.5 TL1 Commands

The commands and autonomous messages used for ONS 15454 and ONS 15327 are described in detail in this section and are listed alphabetically according to the first alpha character of the command string.

Each TL1 command must be less than or equal to 255 characters. Any command larger than 255 characters must be split into multiple commands. For example, if you use the ED-<STS_PATH> command to edit the J1 EXPTRC/TRC message, UPSR attributes, and TACC attributes and the command exceeds 255 characters the command will not be processed. You must use multiple ED-<STS_PATH> commands instead.

-  **Note** The AID of any TL1 line mode command is a mandatory field in this TL1 release.
-  **Note** The AID definitions provided are supersets of the actual AID definitions.
-  **Note** TL1 commands that are entered incorrectly are not completed.
-  **Note** Starting with this release (R3.3), all TL1 commands will return the DENY error code without any additional error messages prior to a successful TL1 login (i.e. prior to a successful ACT-USER command). Releases earlier than R3.3 either return different error codes; for example, PLNA and IICT and also additional error messages; for example, Login Not Active.

3.5.1 ACT-USER: Activate User

This command is used to set-up a session with the Network Element (NE).

Notes:

1. Passwords are visible on-screen when entered for the ENT-USER-SECU and ACT-USER commands. Cisco recommends that you close any windows containing sensitive information after exiting a TL1 session.
2. In this release, the ACT-USER command does not return the date and time of the last session established by the UID or the number of unsuccessful session attempts since the last session.
3. This command is now backwards compatible with userids and passwords from ONS 15454 2.X software versions according to the following rules:
 - a. The syntax of the userid (UID) and the password (PID) are not checked.
 - b. Invalid syntax for both the userid and password is permitted, but the user can only log in if the userid/password match what is in the database.
 - c. The userid and password cannot exceed 10 characters.

Section	ACT-USER Description
Category	Security
Security	N/A

Section	ACT-USER Description (continued)
Related Messages	CANC CANC-USER DLT-USER-SECU ED-PID ED-USER-SECU ENT-USER-SECU REPT EVT SECU
Input Format	ACT-USER:[<TID>]:<UID>:<CTAG>::<PID>; where: <ul style="list-style-type: none">• <UID> is the user identifier and is a string; <UID> is any combination of up to 10 alphanumeric characters. <UID> must not be null.• <PID> is the user login password and is a string; <PID> is any combination of up to 10 alphanumeric characters. <PID> must not be null. Note CTC allows <UID> and <PID> of up to 20 characters. The 20 character CTC-entered <UID> and <PID> are not valid TL1 <UID> and <PID>.
Input Example	ACT-USER:PETALUMA:TERRI:100::MYPASSWD;
Errors	This message generates all the default errors

3.5.2 ALW-MSG-ALL: Allow Message All

This command instructs the NE to enter a mode in which all the REPT ALM and REPT EVT autonomous messages are transmitted. See the INH-MSG-ALL command to inhibit these autonomous messages. When a TL1 session starts, the REPT ALM and REPT EVT messages are allowed by default.

If this command is issued twice in the same session, the SAAL (Status, Already Allowed) error message will be returned. The optional fields in the e block are not supported.

Section	ALW-MSG-ALL Description
Category	System
Security	Retrieve
Related Messages	ED-DAT RTRV-INV ED-NE-GEN RTRV-NE-GEN ED-NE-SYNCN RTRV-NE-IPMAP INH-MSG-ALL RTRV-NE-SYNCRN INIT-SYS RTRV-TOD RTRV-HDR SET-TOD
Input Format	ALW-MSG-ALL:[<TID>]::<CTAG>[::,];
Input Example	ALW-MSG-ALL:PETALUMA::549;
Errors	This message generates all the default errors

3.5.3 ALW-MSG-DBCHG: Allow Database Change Message

This command is used to enable REPT DBCHG.

Note

This command is not defined in the GR.

Section	ALW-MSG-DBCHG Description
Category	Log
Security	Retrieve
Related Messages	INH-MSG-DBCHG REPT DBCHG RTRV-LOG
Input Format	ALW-MSG-DBCHG:[<TID>]:<CTAG>[::,];
Input Example	ALW-MSG-DBCHG:CISCO::123;
Errors	This message generates all the default errors

3.5.4 ALW-Swdx-EQPT: Allow Switch Duplex Equipment

(Cisco ONS 15454 only)

This command instructs an NE to allow automatic or manual switching on a duplex system containing duplexed or redundant equipment. To inhibit an NE switching to duplex, use the INH-Swdx-EQPT command.

ALW-Swdx-EQPT is not used for SONET line or electrical card protection switching. For SONET line or path protection switching commands, see OPR-PROTNSW and RLS-PROTNSW commands. For the electrical card protection switching, see SW-TOWKG-EQPT and SW-TOPROTN-EQPT commands.

Note

This command applies to the XC or XCVT equipment unit only in this release.

Section	ALW-Swdx-EQPT Description

Input Format	ALW-Swdx-EQPT:[<TID>]:<AID>:<CTAG>[::]; where: • <AID> is the XC/XCVT equipment AID from the “EQPT” section on page 4-11	

Section	ALW-Swdx-EQPT Description (continued)
Input Example	ALW-Swdx-EQPT:CISCO:SLOT-8:1234;
Errors	This message generates all the default errors

3.5.5 ALW-SWTOPROTN-EQPT: Allow Switch to Protection Equipment

(Cisco ONS 15454 only)

This command instructs the NE to allow automatic or manual switching of an equipment unit back to a protection status. Use the INH-SWTOPROTN-EQPT command to inhibit an NE from switching to protection.

ALW-SWTOPROTN-EQPT is used for non-SONET line cards (e.g. DS1, DS3, DS3XM, and EC1). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection. When this command is given to a working unit, the working unit will be allowed to switch to the protection unit. When this command is given to a protection unit, any working unit in the protection group is allowed to switch to the protection unit.

The standing condition of INHSWPR on the unit specified by the AID will be cleared.

Notes:

1. This command only supports one value of the <DIRN> parameter - BTH. A command with any other value is considered an incorrect use of the command. An IDNV (Input, Data Not Valid) error message should be responded.
2. This command is not used for the common control (TCC+ or XC/XCVT) cards. A command on a common control card will receive an IIAC (Input, Invalid Access Identifier) error message. To use the common control card switching commands, use the SW-DX-EQPT and ALW-Swdx-EQPT commands.
3. This command is not used for SONET (OCN) cards. A command on a SONET card will receive an IIAC (Input, Invalid Access identifier) error message. To use a SONET card switching command, use OPR-PROTNSW and RLS-PROTNSW commands.
4. If this command is used on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message should be responded.
5. If this command is used on a card that is not in the inhibit state, the SAAL (Status, Already Allowed) error message should be responded.
6. The following situation(s) are allowed and will not generate any error response: Sending this command to missing cards so long as none of the previous error conditions apply.

3.5.6 ALW-SWTOWKG-EQPT: Allow Switch to Working Equipment

(Cisco ONS 15454 only)

This command instructs the NE to allow automatic or manual switching of an equipment unit back to a working status. Use the INH-SWTOWKG-EQPT command to inhibit an NE from switching to working. ALW-SWTOWKG-EQPT is used for non-SONET line cards (e.g. DS1, DS3, DS3XM, and EC1). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection. When this command is given to a working unit, the working unit will be allowed to carry traffic. When this command is given to a protection unit, the protection unit will be allowed to switch back to the working unit currently protected as long as the working unit has not raised INHSWWKG.

In the case of revertive protection, the traffic will switch immediately from the protection unit to the working unit regardless of the reversion time setting. In the case of non-revertive protection, the protection unit will continue to carry the traffic.

The standing condition of INHSWWKG on the unit specified by the AID will be cleared.

Notes:

1. This command only supports one value of the <DIRN> parameter - BTH. A command with any other value is considered an incorrect use of the command. An IDNV (Input, Data Not Valid) error message should be responded.
2. This command is not used for the common control (TCC+ or XC/XCVT) cards. A command on a common control card will receive an IIAC (Input, Invalid Access Identifier) error message. To use the common control card switching commands, use the SW-DX-EQPT and ALW-Swdx-EQPT commands.
3. This command is not used for SONET (OCN) cards. A command on a SONET card will receive an IIAC (Input, Invalid Access Identifier) error message. To use a SONET card switching command, use the OPR-PROTNSW and RLS-PROTNSW commands.
4. If this command is used on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message should be responded.
5. If this command is used on a card that is not in the inhibit state, the SAAL (Status, Already Allowed) error message should be responded.

3.5.7 CANC: Cancel

Reports the occurrence of a session timeout event.

CANC is an autonomous message transmitted by the NE to a user when a session established by that user is terminated because no messages were exchanged for a long period of time, a timeout. The timeout period is set based on the user’s privilege. The superuser [SUPER] has the timeout period of 15 minutes. The Provision user [PROV] has the timeout period of 30 minutes. The Maintenance [MAINT] user has the timeout period of 60 minutes.

When a timeout occurs, the corresponding port drops and the next session initiation at that port requires the regular login procedure.

3.5.9 CHG-ACCMD-<MOD_TACC>: Change Access Mode (DS1, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)

(STS192C supported for Cisco ONS 15454 only)

This command changes the test access (TACC) mode for the circuit being tested. For more information on TACC, refer to the “Test Access” section on page 1-9.

This may be a change from monitoring the data to inserting data into the STS. This command can only be applied to an existing (test access path) TAP connection.

Notes:

1. If there is no TAP connection, a DENY error message will be returned.
2. If a requested condition already exists, a SRCN error message will be returned.
3. If a requested access configuration is invalid, a SRAC error message will be returned
4. If a requested TAP does not exist, a RTEN error message is returned.

Errors	This message generates all the default errors

3.5.10 CONN-TACC-<MOD_TACC>: Connect TACC (DS1, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)

(STS192C supported for Cisco ONS 15454 only)

This command connects the STS or VT defined by AID to the STS or VT specified by the TAP number. For more information on TACC, refer to the “Test Access” section on page 1-9.

Notes:

1. If all TAPs are busy, a RABY error message will be returned.
2. If a requested TAP is busy, a RTBY error message will be returned.

3. If a requested TAP does not exist, a RTEN error message will be returned.
4. If a circuit is already connected to another TAP, a SCAT error message will be returned.
5. If a requested condition already exists, a SRCN error message will be returned.
6. If the AID is invalid, a IIAC (Input, Invalid Access Identifier) error message will be returned.
7. If an access is not supported, an EANS error message will be returned.
8. If a requested access configuration is invalid, a SRAC error message will be returned.

The <TAP> is used to identify all messages between the TSC and the NE until the access path is released. The <TAP> number must be an integer with a range of 1- 999. This command only supports changing a single <TAP> number at a time. <TAP> is a string. <p>Note This command only disconnects a single TAP at a time.</p>
Input Example	DISC-TACC:CISCO:8:123;
Errors	This message generates all the default errors

3.5.12 DLT-CRS-<STS_PATH>: Delete Cross Connection (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for Cisco ONS 15454 only)

This command deletes a cross connection between STS paths. STS paths are specified using their STS AID.

Notes:

1. The fields after CTAG (trailing colons) are optional.
2. For the 1-way cross connections the AIDs must be in the same order as originally entered; for the 2-way cross connections, either order will work.
3. This command does not support deleting multiple STS cross connections.
4. Using “&” in the AID field of this command can delete an UPSR STS cross connection.

The following command is used to delete a 1-way selector or 2-way selector and bridge with:

from points: f1, f2

to points: t1

DLT-CRS-{STS_PATH}:[<TID>]:f1&f2,t1:<CTAG>;

The following command is used to delete a 1-way bridge or 2-way selector and bridge with:

from point: f1
 to points: t1, t2
 DLT-CRS-{STS_PATH}:[<TID>]:f1,t1&t2:<CTAG>;

The following command is used to delete a 1-way or 2-way subtending UPSR connection with:

from point: f1, f2
 to points: t1, t2
 DLT-CRS-{STS_PATH}:[<TID>]:f1&f2,t1&t2:<CTAG>;

The AID format in the deletion command is the same as the AID format in the retrieved response message. For example, if the output of any retrieved AID is “F1&F2,T1:CCT,STS3C”, the deletion command with the AID format (F1&F2,T1) is required to delete this cross connection.

5. All a&b AIDs in the TL1 cross connection command are in the format of WorkingAid&ProtectAid.
6. You can experience some implementation behavior problems if additional drops have been added to the connection object.
7. The facility AID is only valid for slots holding the G1000-4 card.

Section	DLT-CRS-<STS_PATH> Description
Category	Cross Connection
Security	Provisioning
Related Messages	DLT-CRS-VT1 ENT-CRS-<STS_PATH> ENT-CRS-VT1 RTRV-CRS-<STS_PATH> RTRV-CRS-VT1
Input Format	DLT-CRS-<STS_PATH>:[<TID>]:<FROM>,<TO>:<CTAG>[::]; where: <ul style="list-style-type: none"> • <FROM> indicates an identifier at one end of the STS cross connection; <FROM> is the AID from the “CrossConnectID” section on page 4-7. • <TO> indicates an identifier at the other end of the STS cross connection; <TO> is the AID from the “CrossConnectID” section on page 4-7.
Input Example	DLT-CRS-STS12C:VINBURG:STS-1-1,STS-12-1:102;
Errors	This message generates all the default errors

3.5.13 DLT-CRS-VT1: Delete Virtual Tributary Cross Connect

This command deletes the VT1 cross connections.

Notes:

1. The fields after CTAG (trailing colons) are the optional.
2. For the 1-way cross connections the AIDs must be in same order as originally entered; for the 2-way either order will work.
3. This command does not support deleting multiple VT cross connections.
4. Using “&” in the AID field of this command can delete an UPSR VT cross connection.

The following command is used to delete a 1-way selector or 2-way selector and bridge with:

```
from points: f1, f2
to points: t1
DLT-CRS-VT1:[<TID>]:f1&f2,t1:<CTAG>;
```

The following command is used to delete a 1-way bridge or 2-way selector and bridge with:

```
from point: f1
to points: t1, t2
DLT-CRS-VT1:[<TID>]:f1,t1&t2:<CTAG>;
```

The following command is used to delete a 1-way subtending UPSR connection or 2-way subtending UPSR connection with:

```
from points: f1, f2
to points: t1, t2
DLT-CRS-VT1:[<TID>]:f1&f2,t1&t2:<CTAG>;
```

The AID format in the deletion command is the same as the AID format in the retrieved response message. For example, if the output of any retrieved AID is “F1&F2,T1:CCT”, the deletion command with the AID format (F1&F2,T1) is required to delete this cross connection.

5. All a&b AIDs in the TL1 cross connection command are in the format of WorkingAid&ProtectAid.
6. You can experience some implementation behavior problems if additional drops have been added to the connection object.

Input Example	DLT-CRS-VT1:CISCO:VT1-2-3-7-2,VT1-4-4-5-2:1234;
Errors	This message generates all the default errors

3.5.14 DLT-EQPT: Delete Equipment

This command deletes a card from a slot in the NE.

This command removes the card type and attributes that were entered for a particular slot. If any facilities are assigned, they are deleted too. The command will be denied if the card is part of a protection group or has a cross-connect end-point.

To delete a card that is part of a protection group, it has to be removed from the protection group first via ED-EQPT.

Error conditions for deleting equipment may be:

1. For a card in a protection group that has a cross connection, DCC or is a synchronization source, the SPLD (Equipment in use) error message will be returned.
2. If a card is not provisioned, an error message will be returned.

Input Example	DLT-FFP-OC3:PETALUMA:FAC-2-1,FAC-1-1:1;
Errors	This message generates all the default errors

3.5.16 DLT-USER-SECU: Delete User Security

This command deletes a user and can only be performed by a Superuser. Privilege levels are described in the ENT-USER-SECU command.

Notes:

1. The user whose ID is to be deleted must not be logged in. If this command is executed while the user is logged on, the current session for that user continues. Once the user logs out, the same USERID cannot be used to log in again. If you try to delete a userid and the user is logged in, an error message indicating that the user is logged in will be received.
2. To maintain backwards compatibility, the following rules apply:
 - a. The syntax of <UID> is not checked (but must not exceed ten characters).
 - b. The <UID> is deleted if <UID> exists in the database.

Section	DLT-USER-SECU Description
Category	Security
Security	Superuser

Input Format	DLT-USER-SECU:[<TID>]:<UID>:<CTAG>; where: <ul style="list-style-type: none">• <UID> is the user identifier and is a string; <UID> is any combination of up to 10 alphanumeric characters. <p>Note CTC allows <UID> and <PID> of up to 20 characters. The 20 character CTC-entered <UID> and <PID> are not valid TL1 <UID> and <PID>.</p>
Input Example	DLT-USER-SECU:PETALUMA:CISCO15:123;
Errors	This message generates all the default errors

3.5.17 ED-<OCN_TYPE>: Edit (OC3, OC12, OC48, OC192)

(OC192 supported for Cisco ONS 15454 only)

This command edits the attributes (i.e. service parameters) and state of an OC-N facility. Allowable states for a facility are Out of Service (OOS) and In Service (IS).

The DCC transmit is bridged to both working and protect in a 1+1 configuration. On the receive side, the active one is selected for DCC. The DCC is provisioned on the working port only in a 1+1 configuration.

All OCN lines are allowed to change to SDH mode with the following restrictions:

1. The line must be unprotected at the time, but can be protected after changing.
2. The line can be a sync reference but cannot have “syncMessages” enabled or “send Do Not Use”.
3. The line cannot have Orderwire.
4. The line cannot have VT circuits.
5. The line cannot have DCC.

All lines in a 1+1 or BLSR must have the same mode. If the mode of a line that is in a 1+1 or BLSR is changed, an error message will be returned.

3.5.18 ED-<STS_PATH>: Edit (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for Cisco ONS 15454 only)

This command edits the attributes associated with an STS path.

The SFBER, SDBER, RVRTV, and RVTM parameters only apply to UPSR.

The path trace message is a 64 character string including the terminating CR (carriage return) and LF (line feed) that is transported in the J1 byte of the SONET STS Path overhead. Both the EXPTRC and TRC string can be provisioned by user with up to 62 character string.

The EXPTRC indicates the contents of the expected incoming path trace are provisioned by the user. The TRC indicates the contents of the outgoing path trace message. The INCTRCC indicates the contents of the incoming path trace message.

The path trace mode has three modes: OFF, MANUAL, and AUTO. The path trace mode defaults to OFF. The MANUAL mode performs the comparison of the received string with the user-entered expected string. The AUTO mode performs the comparison of the present received string with an expected string set to a previously received string. If there is a mismatch, TIM-P alarm is raised. When the path trace mode is in OFF mode, there is no path trace processing, and all the alarm and state conditions are reset.

The TACC parameter edits an existing single STS or VT and changes it to a test access path. When an editing command on TACC is executed, it assigns the STS for the first 2WAY test access connection and STS=1 as the second 2WAY connection. For STS3C and STS12C, the next available STS of the same width is chosen. For more information on TACC, refer to the “Test Access” section on page 1-9.

J1 is implemented on the DS1/DS1N, DS3, DS3E/DS3NE, DS3XM, EC1, OC3, OC48AS and OC192 cards.

DS3/DS3N, OC12, OC48, E100, and E1000 cards do not support path trace.

DS1/DS1N, DS3E/DS3NE, and DS3XM support both TRC and EXPTRC in the ED-STS-PATH command.

EC1, OC3, OC48AS, and OC192 only support EXPTRC in the ED-STS-PATH command.

Note

Each TL1 command must be less than or equal to 255 characters. Any command larger than 255 characters must be split into multiple commands. For example, if you use the ED-<STS_PATH> command to edit the J1 EXPTRC/TRC message, UPSR attributes, and TACC attributes and the command exceeds 255 characters the command will not be processed. You must use multiple ED-<STS_PATH> commands instead.

Note

An STS tap created in a DS3XM card cannot be used to connect to an STS having a non-VT structured payload; for example, DS3, if created traffic cannot be monitored.

Note

An STS tap created in a DS3 card cannot be used to connect to an STS having non-DS3 payload; for example, VT-structured, if created traffic cannot be monitored.

Error conditions:

1. If sending this command to edit SFBER or SDBER or RVRTV or RVTM for the non UPSR STS path, an error message (cross-connect does not have UPSR path selector) will be returned.

2. If sending this command to edit the EXPTRC string with the AUTO path trace mode (TRCMODE=AUTO), an error message (incompatible parameter values for exptrc and TRCMODE) will be returned.
3. If sending this command to edit TRC on any card other than DS3(N)E, DS1(N), and DS3XM cards, an error message (TRC-not allowed for monitor paths. Incorrect card type.) will be returned.
4. This command is allowed to edit EXPTRC on DS1(N), DS3(N)E, DS3XM, EC1, OC3, OC48AS, and OC192 cards.
5. If sending this command to edit both TACC and any other attribute(s), the (Parameters Not compatible) error message will be returned.
6. This command is only allowed when there are no circuits/cross connections (no UPSR connections) on that AID.
7. If sending this command to edit TACC on an AID with circuits or cross connections, an error message (VT in Use) will be returned.
8. TACC creation will also be denied on the protect ports/cards.

Input Format	<p>ED-BITS:[<TID>]:<AID>:<CTAG>:::[LINECDE=<LINECDE>],[FMT=<FMT>],[LBO=<LBO>],[SYNCMSG=<SYNCMSG>],[AISTRSHLD=<AISTRSHLD>][:<PST>];</p> <p>where:</p> <ul style="list-style-type: none"> • <AID> is an access identifier from the “BITS” section on page 4-9 • <LINECDE> is a line code; valid values for <LINECDE> are shown in the “LINE_CODE” section on page 4-42 • <FMT> is the frame format; valid values for <FMT> are shown in the “FRAME_FORMAT” section on page 4-41 • <LBO> indicates BITS line build out. The default value is “0-133”. Valid values for <LBO> are shown in the “BITS_LineBuildOut” section on page 4-22 • <SYNCMSG> indicates if this BITS facility supports synchronization status message; <SYNCMSG> defaults to (Y) and valid values are shown in the “ON_OFF” section on page 4-51 • <AISTRSHLD> is the AIS Threshold. Valid values for <AISTRSHLD> shown in the “SYNC_CLOCK_REF_QUALITY_LEVEL” section on page 4-60 • <PST> is a state; valid values for <PST> are shown in the “PST” section on page 4-53
Input Example	ED-BITS:SONOMA:BITS-2:779:::LINECDE=AMI,FMT=ESF,LBO=0-133,SYNCMSG=Y,AISTRSHLD=PRS:IS;
Errors	This message generates all the default errors

3.5.20 ED-BLSR: Edit Bidirectional Line Switched Ring

This command edits the BLSR attributes.

Notes:

1. Only the RVRTV, RVTM, SRVRTV, SRVTM attributes can be edited for the 4-Fiber BLSR.
2. Only the RVRTV and RVTM attributes can be edited for the 2-Fiber BLSR.

Error conditions:

1. If there is a system error, an SDBE (Status, Internal Data Base Error) error message will be returned.
2. If the NE returns nothing for the required BLSR (BLSR number, AID), a SRQN (Status, Invalid Request) error message will be returned.
3. If sending this command to modify any attribute other than RVRTV, RVTM, SRVRTV, and SRVTM on the 4-Fiber BLSR, an IDNV (Input, Data Not Valid) error message will be returned.
4. If sending this command to modify any attribute other than RVRTV and RVTM on the 2-Fiber BLSR, an IDNV (Input, Data Not Valid) error message will be returned.
5. If sending this command to modify RVTM while RVRTV is in non-revertive mode or SRVTM while SRVRTV is in non-revertive mode, an ICNV (Input, Command Not Valid) error message will be returned.

3.5.24 ED-EQPT: Edit Equipment

This command edits the attributes for a given equipment slot in the NE. If the card is in an equipment slot, this command is allowed only on the working AID.

The PROTID parameter indicates the unique identifier of the protection group (the protect card). “NULL” is a special value of the PROTID parameter and indicates absence of a protection group. For 1:1 protection type, RVRTV and RVTM parameters can be changed. For 1:1 protection type, if the PROTID parameter is entered as “NULL”, the protection group is deleted.

ED-EQPT:[<TID>]:SLOT-2:<CTAG>:::PROTID=NULL;

For 1:N protection type, if the PROTID is “NULL”, the AIDs in the list are removed from the protection group. If all the working cards are in the AID list, the protection group is deleted.

Example: if Slot-1, Slot-2 and Slot-4 were the only working cards in the protection group. The following command will remove Slot-4 from the protection group:

ED-EQPT:[<TID>]:SLOT-4:<CTAG>:::PROTID=NULL;

The protection group still has Slot-1 and Slot-2 as working cards.

Following command will remove all the other working cards in the above example and consequently, delete the protection group itself:

ED-EQPT:[<TID>]:SLOT-2&SLOT-1:<CTAG>:::PROTID=NULL;

In summary, the ED-EQPT command can be successfully executed on an already provisioned card to add a working card to or remove one from a protection group. This command is not valid on a protect card. Only cards can be added to or removed from a protection group. Protection type is immutable and is determined at the time of creation of a protection group (while adding the first working card). Once provisioned, the equipment type can not be edited either.

Examples of adding an existing card to a protection group via ED-EQPT command:

1:1 protection group

ED-EQPT::SLOT-2:12:::PROTID=SLOT-1,RVRTV=Y,RVTM=9.0;

1:1 protection group

ED-EQPT::SLOT-2:12:::PROTID=SLOT-3,PRTYPE=1-N,RVTM=6.5;

Error conditions for editing 1:1 or 1:N protection group may be:

1. Editing the PRTYPE or PROTID (non-NULL value) parameters.
2. Editing RVRTV or RVTM when no protection group exists.
3. Editing RVRTV for 1:N protection.
4. Failed to remove, currently switched to protect.

Errors	This message generates all the default errors	

3.5.28 ED-NE-SYNCN: Edit Network Element Synchronization

This command edits the synchronization attributes of the NE.

Notes:

1. Although mixed mode timing is supported in this release, it is not recommended. See the “Mixed Mode Timing Support” section on page 1-7 for more information.
2. The existing external and line modes have the same functionality in all ONS 15454 3.x releases:
 - External mode: the node derives its timing from the BITS inputs.
 - Line mode: the node derives its timing from the SONET line(s).
 - Mixed mode: the node derives its timing from the BITS input or SONET lines.

3.5.29 ED-PID: Edit Password

This command allows a user to change their own password.

The password cannot be null. It will be echoed as clear text as the message is parsed only after the complete message is entered and terminated.

Notes:

1. The password will not appear in the TL1 log on the NE.
2. You must use the ED-USER-SECU command to change the empty password (Superuser CISCO15 default empty password) to a non-empty, valid password. The ED-PID command cannot be used to change the empty password to a valid password.
3. If you use the ED-PID command to change the password while providing an incorrect old password (including an empty password), both ED-PID and ED-USER-SECU commands will be broken and cannot be used to edit passwords in the current TL1 session. You must exit the TL1 session and login again to perform a valid edit password function by using the ED-PID or ED-USER-SECU commands.

Section	ED-PID Description
Category	Security

3.5.30 ED-SYNCN: Edit Synchronization

This command edits the synchronization reference list used to determine the sources for the NE's reference clock and the BITS output clock. For each clock, up to three synchronization sources may be specified (e.g., PRIMARY, SECOND, THIRD). To view or edit the system timing mode, use the RTRV-NE-SYNCN or ED-NE-SYNCN commands.

Note

To retrieve/set the timing mode, SSM message Set or Quality of RES information, use the RTRV-NE-SYNCN and ED-NE-SYNCN commands.

3.5.31 ED-T1: Edit T1 Facility

This command edits the attributes related to a DS1/T1 port.

Notes:

1. This command is not allowed if the card is a protecting card.
2. If sending this command to edit TACC and any other attribute(s), and the port having the cross connection, the (Parameters Not compatible) error message will be returned.
3. Editing TACC via an ED-xxx command is only allowed when there is no circuit/cross connection on this port. Otherwise, an error message (VT in Use) will be returned.
4. TACC creation will also be denied on the protect ports/cards.

Section	ED-T1 Description
Category	Ports
Security	Provisioning
Related Messages	ED-<OCN_TYPE> ED-DS1 ED-EC1 ED-G1000 ED-T3 RMV-<MOD_PORT> RST-<MOD_PORT>
Input Format	ED-T1:[<TID>]:<AID>:<CTAG>:::[LINECDE=<LINECDE>],[FMT=<FMT>],[LBO=<LBO>],[TACC=<TACC>][:<PST>]; where: <ul style="list-style-type: none"> • <AID> is the access identifier from the “FACILITY” section on page 4-11 • <LINECDE> is the line coding; valid values for <LINECDE> are shown in the “LINE_CODE” section on page 4-42 • <FMT> is the frame format; valid values for <FMT> are shown in the “FRAME_FORMAT” section on page 4-41 • <LBO> is the line build out; valid values for <LBO> are shown in the “LINE_BUILDOUT” section on page 4-42 • <TACC> defines the STS as a test access port with a selected unique TAP number. The TAP number ranges from 0–999. When TACC is 0, the TAP is deleted; <TACC> is an integer. • <PST> is the state; valid values for <PST> are shown in the “PST” section on page 4-53

Errors	This message generates all the default errors

3.5.32 ED-T3: Edit T3 Facility

This command edits the attributes related to a DS3/T3 port.

Notes:

1. This command is not allowed if the card is a protecting card.
2. Both FMT and Line code are not supported for T3/DS3 facility. They are supported on both the DS3XM and DS3E card. The unframed value of the framing format is only supported on the DS3E facility.
3. If sending this command to edit TACC and any other attribute(s), and the port having the cross connection, the (Parameters Not compatible) error message will be returned.
4. Editing TACC via an ED-xxx command is only allowed when there is no circuit/cross connection on the port and the port/VT does not have a TAP. Otherwise, an error message (VT in Use) will be returned.
5. TACC creation will also be denied on the protect ports/cards.

3.5.33 ED-USER-SECU: Edit User Security

This command edits a user's privileges, password, or ID. Only a Superuser may perform this operation. Privilege levels are described in the ENT-USER-SECU command. If the password is changed with this command, the password should be blanked out in the TL1 log.

Notes:

1. The <UID> can be any combination of up to 10 alphanumeric characters.
2. The <PID> is a string of up to 10 characters where at least 2 are non-alphabetic with at least one special character (+, %, or #).
3. Although the CTC allows both <UID> and <PID> of up to 20 characters, the CTC-entered users (<UID>, <PID>) are not valid TL1 users.
4. This command is now backwards compatible according to the following rules:
 - a. The syntax of <NEWPID> is checked and must meet TL1 standards.
 - b. If the <NEWPID> is specified, the syntax is checked and must meet TL1 standards.
 - c. The syntax of <UID> is not checked.
 - d. Old users can change their password without changing their userid, but the new password must meet the new requirements.
 - e. The <NEWPID> is required when changing the <USERID>.

Currently, when <NEWUID> is specified, <NEWPID> is not optional; however, it is possible to change a userid without changing the password by providing the same password. Users are not allowed to keep their old password if the old password does not meet the new syntax requirements; for example,

```
<USERID> = DODI2345
<PASSWORD> = DODI#234 /*PASSWORD ALREADY MEETS REQUIREMENTS*/
```

```
> ED-USER-SECU::DODI2345:1::DODI3456,DODI#234,,PROV;
ED-USER-SECU::DODI2345:1::DODI3456,DODI#234,,PROV;
```

```

Errors	This message generates all the default errors

3.5.34 ED-VT1: Edit Virtual Tributary

This command edits the attributes associated with a VT1 path.

Both RVRTV and RVTM parameters only apply to UPSR.

The TACC parameter edits an existing single STS or VT and changes it to a test access path. When an editing command on TACC is executed, it assigns the STS for the first 2-way connection and STS=1 as the second 2-way connection.

Error conditions:

1. Sending this command to edit RVRTV or RVTM for the non UPSR VT path, an error message will be returned.
2. If sending this command to edit both TACC and any other attribute(s), the (Parameters Not compatible) error message will be returned.
3. This command is only allowed whenever there are no circuits/cross connections (no UPSR connections) on that AID.
4. If sending this command to edit TACC on an AID with circuits or cross connections, or if the port/VT has a TAP, an error message (VT in Use) will be returned.
5. TACC creation will also be denied on the protect ports/cards.

The TAP number ranges from 0–999. When TACC is 0, the TAP is deleted. <TACC> is an integer.
Input Example	ED-VT1:CISCO:VT1-2-3-1-4:123:::RVRTV=Y,RVTM=1.0,TACC=8;
Errors	This message generates all the default errors

3.5.35 ENT-CRS-<STS_PATH>: Enter Cross Connection (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for ONS 15454 only)

This command creates an STS cross connection with a cross connection type (CCT).

When a UPSR cross connection is created, the path presented by the first AID is configured to be the preferred path. For example, the AID (f1) of the cross connection (created by ENT-CRS-STS1::f1&f2,t1:123;) is the preferred path.

Notes:

1. The default cross connection type is 2WAY.
2. If a path is already in a connection, it cannot be in another connection even if the other is a 1WAY and the new one will be 1WAY the other direction.
3. This command does not support creating multiple STS cross connections.
4. The UPSR cross STS connection can be created by using “&” in the AID fields of this command.

The following command is used to create a 1WAY selector or 2WAY selector and bridge with:

```
from points: f1, f2
to points: t1
ENT-CRS-{STS_PATH}:[<TID>]:f1&f2,t1:<CTAG>::[<CCT>];
```

The following command is used to create a 1WAY bridge or 2WAY selector and bridge with:

```
from point: f1
to points: t1, t2
ENT-CRS-{STS_PATH}:[<TID>]:f1,t1&t2:<CTAG>::[<CCT>];
```

The following command is used to create a 1WAY subtending UPSR connection or 2WAY subtending UPSR connection with:

```
from point: f1, f2
to points: t1, t2
ENT-CRS-{STS_PATH}:[<TID>]:f1&f2,t1&t2:<CTAG>::[<CCT>];
```

The following command is used to create a 2WAY selector and bridge with:

```
from point: f1,f2 (f1 is the working side, f2 is the protect side)
nbsp;selector points: s1, s2 (s1 is the working side, s2 is the protect side)
ENT-CRS-{STS_PATH}:[<]:f1&f2,s1&s2:::2WAY;
```

5. All a&b AIDs in the TL1 cross connection command are in the format of WorkingAid&ProtectAid.
6. To establish a cross connection on a 2F protection path or on a 4F protection channel, the PCA connection type (1WAYPCA or 2WAYPCA) is required.
7. If you send a PCA cross connection type on the non-PCA AIDs, the IIAC error message is returned.
8. If you send a non-PCA cross connection type on the PCA AIDs, the IIAC error message is returned.
9. The facility AID is only valid on slots holding a G1000-4 card (ONS 15454).

Section	ENT-CRS-<STS_PATH> Description
Category	Cross Connections
Security	Provisioning
Related Messages	DLT-CRS-<STS_PATH> DLT-CRS-VT1 ENT-CRS-VT1 RTRV-CRS-<STS_PATH> RTRV-CRS-VT1
Input Format	<p>ENT-CRS-<STS_PATH>:[<TID>]:<FROM>,<TO>:<CTAG>::[<CCT>][::]; where:</p> <ul style="list-style-type: none"> • <FROM> indicates an identifier at one end of the STS cross connection and is the AID from the “CrossConnectID” section on page 4-7 • <TO> indicates an identifier at the other end of the STS cross connection and is the AID from the “CrossConnectID” section on page 4-7 • <CCT> identifies the cross connection type; valid values for <CCT> are shown in the “CCT” section on page 4-23 <p>Note A facility AID of FAC-{1-6,12-17}-{1-4} is allowed as the <FROM> or <TO> portions of the cross connect for a G1000-4 card (ONS 15454). For UPSR cross connections, the FAC aid should not be used in conjunction with the “&” syntax, so <FROM> or <TO> AIDs such as “STS-1-1&FAC-5-1” or “FAC-1-1&FAC-2-1” or “FAC-3-1&STS-2-1” should not be used. However, if the <FROM> or <TO> AID uses multiple STS aids, then the other AID of the cross connection can be a single FAC AID and “STS-1-1&STS-2-1,FAC-5-1” and “FAC-5-1,STS-1-1&STS-2-1” are allowed.</p>
Input Example	ENT-CRS-STS1:BODEGA:STS-5-1,STS-12-5:116::2WAY;
Errors	This message generates all the default errors

3.5.36 ENT-CRS-VT1: Enter Virtual Tributary Cross Connection

This command creates a VT1 cross connect. When a UPSR cross connection is created, the path presented by the first AID is configured to be the preferred path. For example, the first AID (f1) of the cross connection (created by ENT-CRS-VT1::f1&f2,t1:123;) is the preferred path.

Notes:

1. The default cross connection type is 2WAY.
2. If a path is already in a connection, it cannot be in another connection even if the other is a 1WAY and the new one will be 1WAY the other direction.
3. This command does not support creating multiple VT cross connections.
4. The UPSR VT cross connection can be created by using “&” in the AID fields of this command.

The following command is used to create a 1WAY selector or 2WAY selector and bridge with:

from points: f1, f2

to points: t1

ENT-CRS-VT1:[<TID>]:f1&f2,t1:<CTAG>::[<CCT>];

The following command is used to create a 1WAY bridge or 2WAY selector and bridge with:

```
from point: f1
to points: t1, t2
ENT-CRS-VT1:[<TID>]:f1,t1&t2:<CTAG>::[<CCT>];
```

The following command is used to create a 1WAY subtending UPSR connection or 2WAY subtending UPSR connection with:

```
from point: f1, f2
to points: t1, t2
ENT-CRS-VT1:[<TID>]:f1&f2,t1&t2:<CTAG>::[<CCT>];
```

The following command is used to create a 2WAY selector and bridge with:

```
from points: f1, f2 (f1 is the working side, f2 is the protect side)
selector points: s1, s2 (s1 is the working side, s2 is the protect side)
ENT-CRS-VT1:[<]:f1&f2,s1&s2::2-way;
```

5. All a&b AIDs in the TL1 cross connection command are in the format of WorkingAid&ProtectAid.
6. To establish a cross connection on a 2F protection path or on a 4F protection channel, the PCA connection type (1WAYPCA or 2WAYPCA) is required.
7. If you send a PCA cross connection type on the non-PCA AIDs, an IIAC error message is returned.
8. If you send a non-PCA cross connection type on the PCA AIDs, an IIAC error message is returned.

3.5.37 ENT-EQPT: Enter Equipment

This command enters the card type and attributes for a given equipment slot in the NE. It also automatically enters all facilities supported by the card, assigning default values to all facility and path attributes.

The command supports optional parameters: RVTM (revertive time), RVRTV (revertive behavior), PROTID (unique protection id) and PRTYPE (protection type) for configuring the card in an equipment protection group. PRTYPE can be 1:1 and 1:N. These parameters can only be entered for a working AID. The protect card must already be provisioned before creating the protection group.

1:1 protection involves the odd slot protecting the even slot. The work-protect pair is as follows (2-1, 4-3, 6-5, 16-17, 14-15, 12-13). DS1, DS3, DS3XM, DS3N, DS3E, EC1 and other electrical cards support 1:1 protection. The value of PROTID is the protecting slot and is of the form “slot-x”. This command creates a 1:1 protection group. If the command has the optional parameters for creating a protection group and the protection group cannot be created due to an error condition, provisioning of the equipment fails.

The PROTID slot must be provisioned first.

To create 1:1 with the ENT-EQPT command, the working card should not be provisioned first, so the AID type field should be presented in ENT-EQPT for the AID on this <AID>.

The following is an example for a 1:1 protection group:

```
ENT-EQPT:[<TID>]:SLOT-1:<CTAG>::DS1;
ENT-EQPT:[<TID>]:SLOT-2:<CTAG>::DS1:PROTID=SLOT-1,PRTYPE=1-1,RVTM=5.0,
RVRTV=Y;
```

1:N protection is always revertive. For 1:N protection, the protect slot can only be Slot 3 or Slot 15. For protect card in Slot 3, the working cards can be in any of the slots on Bank A. Slot 15 is for protection in Bank B. A DSXN (DS1N or DS3N) card must be provisioned in the protect slot. A 1:1 protection cannot be upgraded to 1:N protection. This command creates a 1:N protection group or adds a new card to an existing 1:N protection group. Multiple working AIDs can be entered in a protection group.

The following is an example of provisioning a 1:N protection group with the ENT-EQPT command:

```
ENT-EQPT:[<TID>]:SLOT-3:<CTAG>::DS1N;
ENT-EQPT:[<TID>]:SLOT-2&SLOT-1:<CTAG>::DS1:PROTID=SLOT-3,PRTYPE=1-N;
```

The following is an example of provisioning a 1:N protection group with the ED-EQPT command:

```
ENT-EQPT:[<TID>]:SLOT-1&SLOT-2:<CTAG>::DS1;
ENT-EQPT:[<TID>]:SLOT-3:<CTAG>::DS1N;
ED-EQPT:[<TID>]:SLOT-2&SLOT-1:<CTAG>:::PROTID=SLOT-1,PRTYPE=1-N;
```

If the provisioning fails for some AIDs, PRTL responses will be provided indicating failed AIDs. If the provisioning fails for all the AIDs, a DENY response will be provided. For both CMPLD and PRTL responses on creating protection group query, the protection group has been created for the successful AID(s) query.

The following is an example for 1:N protection. RVRTV parameter is not valid for 1:N protection.

```
ENT-EQPT:[<TID>]:SLOT-2:<CTAG>:::PROTID=SLOT-3,PRTYPE=1-N,RVTM=5.0;
```

Both ENT-EQPT and ED-EQPT commands can provision all working AIDs (1-5) together for 1:N by using listed AIDs.

The ENT-EQPT command provisions a new card and adds it to the protection group. The ED-EQPT command adds the already provisioned cards to the protection group.

Protect AID should already be provisioned for either command because protection group parameters are not supported for the protect AID.

In summary, the ENT-EQPT command provisions an equipment successfully on an empty slot if the equipment type is compatible with the slot number. This command can have the optional parameters in the “f” block to provision a card as working card. It has the effect of adding the protection behavior at the time of provisioning itself. For the protection provisioning to succeed, the protect card should have already been provisioned. Trying to execute ENT-EQPT to provision a protection group on an already provisioned card will result in an error.

An example to provision a 1:1 protection group:

ENT-EQPT::SLOT-1:12::DS3;// provision the protect card

ENT-EQPT::SLOT-2:12::DS3:PROTID=SLOT-1,RVRTV=Y,RVTM=8.0; //provision a card and add it to the protection group.

An example to provision a 1:N protection group:

ENT-EQPT::SLOT-3:12::DS3N;//provision the protect card

ENT-EQPT::SLOT-1:12::DS3:PROTID=SLOT-3,RVTM=7.5,PRTYPE=1-N;//provision a card and add it to protection group.

Sending this command to provision a DS3NE card on Slot { 1,2,4,5,6,12,13,14,16,or 17}, the DS3E card type is presented.

Error conditions for creating 1:1 or 1:N protection groups are:

1. AID sent to non-working slot. The working cards must be in even slots for 1:1 and in the same bank for 1:N and not in Slot 3 or Slot 15 (ONS 15454).
2. Invalid AID chosen for protection slot.
3. Working AID is already in protection group.
4. AID is a protect AID.
5. The protect card has a circuit.
6. The equipment type does not match with the allowed AID.
7. The slot is already provisioned.
8. The protecting slot is not provisioned.
9. Multiple working AIDs for 1:1 protection.

3.5.39 ENT-USER-SECU: Enter User Security

This command adds a user account. Only a Superuser can do this. Each user is configured as being at one of these four privilege levels:

1. Retrieve [RTRV]: Users possessing this security level can retrieve information from the node, but cannot modify anything. The idle time for Retrieve is unlimited.
2. Maintenance [MAINT]: Users possessing this security level can retrieve information from the node and perform limited maintenance operations such as card resets, Manual/Force/Lockout on cross-connects or in protection groups, and BLSR ring maintenance. The idle time for Maintenance is 60 minutes.
3. Provisioning [PROV]: Users possessing this security level can perform all maintenance actions, and all provisioning actions except those restricted to superusers. The idle time for Provisioning is 30 minutes.
4. Superuser [SUPER]: Users possessing this security level can perform all PROV user actions, plus creating/deleting user security profiles, setting basic system parameters such as time/date, node name, and IP address, doing database backup & restore. The idle time for Superuser is 15 minutes.

Notes:

1. The <UID> can be any combination of up to 10 alphanumeric characters.
2. The <PID> is a string of up to 10 characters where at least 2 characters are non-alphabetic with at least one special character (*, %, or #).
3. Although the CTC allows both <UID> and <PID> of up to 20 characters, the CTC-entered users (<UID> and <PID>) may not be valid TL1 users.

4. The TL1 password security is enforced with the following rules:
 - a. The username <UID> must not be the same as the password (<PID>).
 - b. The password <PID> must have one non-alphabetic and one special (*, %, or #) character.
 - c. There is no password <PID> toggling.

3.5.40 EX-SW-<OCN_BLSR>: Operate Protection Switch (OC12, OC48, OC192)

(OC192 supported for ONS 15454 only)

This command instructs an NE to exercise the algorithm for switching from a working facility to a protection facility without actually performing a switch. It is assumed that the facility being exercised is the working unit. The exercise switching success or failure result will be indicated by an automatic alarm.

Exercise switch for the SONET protection line is not supported in this release. If sending this command to the protection unit, an error message will be returned. In addition to all normal INPUT, EQUIPAGE, PRIVILEGE error codes, the following error codes are also included in this command:

SNVS (Status, Not in Valid State)

SROF (Status, Requested Operation Failed)

SSRD (Status, Switch Request Denied)

3.5.43 INH-Swdx-EQPT: Inhibit Switch Duplex Equipment

(Cisco ONS 15454 only)

This command instructs the NE to inhibit automatic or manual switching on a system containing duplex equipment. Use the ALW-Swdx command to release the inhibit. This command is not used for SONET line protection switching. For SONET line/path protection switching commands, use the OPR-PROTNSW and RLS-PROTNSW commands. This command is not used for 1:1 and 1:N equipment protection switching, use ALW-SWTOPROTN, ALW-SWTOWKG, INH-SWTOPROTN, INH-SWTOWKG commands.

Notes:

1. This command is applied for XC or XCVT equipment units only in this release.
2. When sending this command to a TCC+ card, an error message will occur because the NE treats the TCC+ as a non-revertive protection group without user control.

Input Format	INH-Swdx-EQPT:[<TID>]:<aid>:<CTAG>[::]; where: • <AID> is the XC/XCVT equipment AID (Slot 8 or Slot 10) from the “EQPT” section on page 4-11	

Section	INH-Swdx-EQPT Description (continued)
Input Example	INH-Swdx-EQPT:CISCO:SLOT-1:1234;
Errors	This message generates all the default errors

3.5.44 INH-SWTOPROTN-EQPT: Inhibit Switch to Protection Equipment

(Cisco ONS 15454 only)

This command instructs the NE to inhibit automatic or manual switching of an equipment unit to protection. Use the ALW-SWTOPROTN-EQPT command to release the inhibit.

INH-SWTOPROTN-EQPT is used for non-SONET line cards (e.g. DS1, DS3, DS3XM and EC1 cards). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection. When performing a lockout with this command, the traffic will be switched from the unit specified by the AID, unless the working unit being protected has failed or is missing. When performing a lock on with this command and the working unit specified in the AID is in standby, sending this command will also initiate a traffic switch. When traffic is locked on a working unit or locked out of the protection unit with this command, the protection unit will not carry traffic, even if the working unit is pulled from the system.

Sending this command to a working unit in a 1:N protection group does not prevent a protection switch from another working unit in the same protection group. All the working units must be sent this command to prevent a protection switch. If the command is sent only to a subset of the working units, only those working units will have traffic locked on.

The inhibit state is persistent over TCC+ side switches and removal/reboot of all the units in the protection group. The inhibit state can, but does not have to be persistent over a complete power cycle of the NE.

The unit specified by the AID will raise the condition of INHSWPR when this command is sent.

Notes:

1. This command only supports one value of the <DIRN> parameter - BTH. A command with any other value is considered an incorrect use of the command. An IDNV (Input, Data Not Valid) error message should be responded.
2. This command is not used for the common control (TCC+ or XC/XCVT) cards. A command on a common control card will receive an IIAC (Input, Invalid Access Identifier) error message. To use the common control card switching commands, use the SW-DX-EQPT and ALW-Swdx-EQPT commands.
3. This command is not used for SONET (OCN) cards. A command on a SONET card will receive an IIAC (Input, Invalid Access Identifier) error message. To use a SONET card switching command, use the OPR-PROTNSW and RLS-PROTNSW commands.
4. If this command is used on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message should be received.
5. If this command is used on a card that is already in the inhibit state, the SAIN (Status, Already Inhibited) error message should be received.
6. If sending the inhibit switch to protection command to a working card when the protect card in the same protection group has already raised the condition of INHSWWKG, the SPLD (Status, Protection unit Locked) error message should be responded.

7. If sending the inhibit switch to protection command to the protect card when a working card in the same protection group has already raised the condition of INHSWWKG, the SWLD (Status, Working unit Locked) error message should be responded.
8. Sending the inhibit switch to protection command to an active protect card when the peer working card is failed or missing, the SWFA (Status, Working unit Failed) error message should be responded.
9. The following situation(s) are allowed and will not generate any error response: sending this command to missing cards as long as none of the previous error conditions apply.

The command only supports one value of the <DIRN> parameter - BTH. This parameter defaults to BTH; valid values for <DIRN> are shown in the DIRECTION, page 35 	
Input Example	INH-SWTOPROTN-EQPT:CISCO:SLOT-2:123::BTH;	
Errors	This message generates all the default errors	

3.5.45 INH-SWTOWKG-EQPT: Inhibit Switch to Working Equipment

(Cisco ONS 15454 only)

This command instructs the NE to inhibit automatic or manual switching of an equipment unit back to the working unit. Use the ALW-SWTOWKG-EQPT command to release the inhibit.

INH-SWTOWKG-EQPT is used for non-SONET line cards (e.g. DS1, DS3, DS3XM and EC1 cards). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection. When performing a lock-out with this command, the traffic will be switched from the unit specified by the AID, unless the protection unit has failed or is missing. When performing a lock-on with this command and the protection unit specified in the AID is in standby, sending this command will initiate a traffic switch only when there is one working card in the protection group. In the case where there is more than one working card in the protection group, an error will be generated (see error conditions below). When traffic is locked on the protection unit or locked out of a working unit with this command, the working unit will not carry traffic, even if the protection unit is pulled from the system.

The inhibit state is persistent over TCC+ side switches and removal/reboot of all the units in the protection group. The inhibit state can but does not have to be persistent over a complete power cycle of the NE.

The unit specified by the AID will raise the condition of INHSWWKG when this command is sent.

Notes:

1. The command only supports one value of the <DIRN> parameter - BTH. A command with any other value is considered an incorrect use of the command. An IDNV (Input, Data Not Valid) error message should be responded.
2. This command is not used for the common control (TCC+ or XC/XCVT) cards. A command on a common control card will receive an IIAC (Input, Invalid Access Identifier) error message. To use the common control card switching commands, use the SW-DX-EQPT and ALW-Swdx-EQPT commands.
3. This command is not used for SONET (OCN) cards. A command on a SONET card will receive an IIAC (Input, Invalid Access Identifier) error message. To use a SONET card switching command, use the OPR-PROTNSW and RLS-PROTNSW commands.
4. If this command is used on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message should be received.
5. If this command is used on a card that is already in the inhibit state, the SAIN (Status, Already Inhibited) error message should be received.
6. If sending this command to a working card when the protect card in the same protection group has already raised the condition of INHSWPR, the SPLD (Status, Protection unit Locked) error message should be received.
7. If sending the INH-SWTOWKG command to a protect card when a working card in the same protection group has already raised the condition of INHSWPR, the SWLD (Status, Working unit Locked) error message should be responded.
8. If sending the INH-SWTOWKG command to an active working card when the protect card has failed or is missing, the SPFA (Status, Protection unit Failed) error message should be received.
9. If sending the INH-SWTOWKG command to an active working card when the protect card is already carrying traffic (this only occurs in a 1:N protection group with N greater than one), the SPAC (Status, Protection unit Active) error message should be received.
10. The following situation is allowed and will not generate any error response: Sending this command to missing cards as long as none of the previous error conditions apply.

Input Format	OPR-LPBK-<MOD2_IO>:[<TID>]:<AID>:<CTAG>::,,,[<LPBKTYPE>]; where: <ul style="list-style-type: none"> • <AID> is the access identifier. The <AID> is only supported for FACILITY and DS1; <AID> is from the “ALL” section on page 4-5 • <LPBKTYPE> indicates the loopback type; valid values for <LPBKTYPE> are shown in the “LPBK_TYPE” section on page 4-43
Input Example	OPR-LPBK-DS1:PTREYES:DS1-4-2-13:203::,,,FACILITY;
Errors	This message generates all the default errors

3.5.50 OPR-PROTNSW-<OCN_TYPE>: Operate Protection Switch (OC3, OC12, OC48, OC192)

(OC192 supported for ONS 15454 only)

This command instructs the NE to initiate a SONET line protection switch request. User switch requests initiated with this command remain active until they are released via the RLS-PROTNSW-OCN command or are overridden by a higher priority protection switch request.

The switch commands; MAN (Manual Switch), FRCD (Forced Switch) and LOCKOUT (Lockout) are supported by the ONS 15454.

Manual Switch of Protection Line (to Working Line). If the AID identifies the protection line, then (only in the 1+1 architecture) service will be transferred from the protection line to the working line, unless a request of equal or higher priority is in effect.

Manual Switch of Working Line (to Protection Line). If the AID identifies a working line, then service will be switched from the working line to the protection line unless a request of equal or higher priority is in effect.

Force Switch of Protection Line (to Working Line). If the AID identifies the protection line, then (only in the 1+1 architecture) service will be transferred from the protection line to the working line unless a request of equal or higher priority is in effect.

Force Switch of Working Line (to Protection Line). If the AID identifies a working line, then service will be transferred from the working line to the protection line unless a request of equal or higher priority is in effect. A lockout of protection and a signal fail of protection line have higher priority than this switch command.

Lockout of Protection Line. If the AID identifies the protection line, this switch command will prevent the working line from switching to protection line. If the working line is already on protection, then the working line will be switched back to its original working line.

Lockout of Protection Line. If the AID identifies protection line, this switch command will prevent the working line from switching to protection line. If the working line is already on protection, then the working line will be switched back from protection line to its original working line.

Notes:

1. This command is not used for the common control (TCC+ or XC/XCVT) cards. A query on a common control card will generate an IIAC (Input, Invalid Access Identifier) error message. To use this command on the common control card switching commands, use the SW-DX-EQPT and ALW-Swdx-EQPT commands.
2. Sending this command on non-SONET (OCN) cards, an IIAC (Input, Invalid Access Identifier) error message should be received. To query on a non-SONET card switching command, use the ALW-SWTOPROTN/SWTOWKG-EQPT and INH-SWTOPROTN/SWTOWKG-EQPT commands.
3. When sending this command to query on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message should be received.
4. When sending this command to a working card that is failed or missing, the SWFA (Status, Working unit Failed) error message should be received.
5. When sending this command to a protect card that is failed or missing, the SPFA (Status, Protection unit Failed) error message should be received.
6. When sending this command to a card that is already in protection with a higher priority, the SSRD (Status, Switch Request Denied) error message should be received.
7. Sending this command to an OCN line with a switching mode that is already in mode, will return a SAMS (Already in the Maintenance State) error message.
8. To get the protection switching state (manual, lockout, forced), use the RTRV-COND-ALL or RTRV-ALM-ALL commands.
9. Sending the OPR-PROTNSW-OCN command with Manual (or Force) switch over the BLSR line and the BLSR ring has already been in a higher switching state Force (or Lockout Span), the command returns the COMPLD without any standing switching condition, for example, MANUAL-REQ-RING, or FORCED REQ-RING, SC. This means the switching request is preempted. CTC shows this end as APS-CLEAR state.
10. Sending the OPR-PROTNSW-OCN command with Force (or Lockout Span) switch over the BLSR line (near end) and the BLSR (far end) has already been in a lower switching state, Manual (or Force), the command returns the COMPLD with proper standing switching events on the command sent to the near end. The far end (that used to be the lower switch state) sends out the switch clear events, for example, MANUAL-REQ-RING, or FORCED-REQ-RING, CL. This means the lower state end is preempted. CTC shows the low state end as APS-CLEAR.

Related Messages	DLT-FFP-<OCN_TYPE> ED-FFP-<OCN_TYPE> ENT-FFP-<OCN_TYPE> EX-SW-<OCN_BLSR> RLS-PROTNSW-<OCN_TYPE> RTRV-FFP-<OCN_TYPE>
Input Format	OPR-PROTNSW-<OCN_TYPE>:[<TID>]:<AID>:<CTAG>::<SC>,[<ST>]; where: <ul style="list-style-type: none">• <AID> identifies the facility in the NE to which the switch request is directed and is from the “FACILITY” section on page 4-11• <SC> is the switch command on the facility; valid values for <SC> are shown in the “SWITCH” section on page 4-59• <ST> is the BLSR switch type. The switch type is optional, and for BLSR protection switch only. <ST> defaults to RING switch type and valid values are shown in the “SWITCH_TYPE” section on page 4-59
Input Example	OPR-PROTNSW-OC48:CHICKALUMA:FAC-6-1:204::LOCKOUT,SPAN;
Errors	This message generates all the default errors

3.5.51 OPR-PROTNSW-<STS_PATH>: Operate Protection Switch (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for ONS 15454 only)

This command instructs a SONET NE to initiate a SONET path protection (UPSR) switch request. User switch requests initiated with this command (forced switch, lockout, and manual switch) remain active until they are released through the RLS-PROTNSW-<STS_PATH> command or overridden by a higher priority protection switch request.

Notes:

1. This command applies to UPSR configuration only.
2. The VTAID should be working or protect AID only.
3. If you send this command on the Drop AID, a DENY (Invalid AID, should use working/protect AID) message will be returned.
4. To get the protection switching state (manual, lockout, forced), use the RTRV-COND-ALL or RTRV-ALM-ALL commands.

Input Example	OPR-PROTNSW-STS1:CISCO:STS-2-1:123::MAN;
Errors	This message generates all the default errors

3.5.52 OPR-PROTNSW-VT1: Operate Virtual Tributary Protection Switch

This command instructs a SONET NE to initiate a SONET path protection (UPSR) switch request. User switch requests initiated with this command (forced switch, lockout, and manual switch) remain active until they are released through the RLS-PROTNSW-VT1 command or overridden by a higher priority protection switch request.

Notes:

1. This command applies to UPSR configuration only.
2. The VTAID should be working or protect AID only.
3. If you send this command on the Drop AID, a DENY (Invalid AID, should use working/protect AID) message will be returned.
4. To get protection switching state (manual, lockout, forced), use the RTRV-COND-ALL or RTRV-ALM-ALL commands.

Errors	This message generates all the default errors

3.5.53 OPR-SYNCNSW: Operate Synchronization Switch

This command forces the NE to switch to the reference specified by the synchronization reference number if the reference supplied is valid, otherwise the command will fail.

The Operate Synchronization Switches are released by the RLS-SYNCNSW command or are overridden by a synchronization reference failure.

Once the switch is effective, an event “MANSWTOPRI”, Manual Switch to Primary (or Secondary ...) Reference, will be raised

3.5.68 REPT EVT SECU: Report Event Security

Reports the occurrence of a non-alarmed security even against the NE.

Based on TR-NWT-000835 in TR-NWT-000835 and the AID of the security alarm should be the Connection Identifier (CID) which is not supported in this release. The COM or UID is an acceptable substitute for the AID here. CID's will be supported in a future release.

For the rule of single failure, single message/alarm, the security alarm will not be reported as REPT ALM COM, because it is reported as REPT ALM SECU.

Because the NE sends this security message as a transient message, to make all TL1 autonomous messages consistent, the TL1 agent reports the security message into REPT EVT SECU.

3.5.71 RLS-EXT-CONT: Release External Control

This command is used to release a forced contact state and returns the control of the contact to an AUTOMATIC control state. In AUTOMATIC control state, the contact could be opened or closed depending on triggers that may or may not be provisioned in the NE. Therefore, issuing an RLS might not produce any contact state change.

The NE defaults to having no triggers provisioned for external controls which consequently produces default open contacts. An NE with this default provisioning will always produce an open contact with a RLS-EXT-CONT command.

Notes:

1. The duration is not supported, it defaults to CONTS.
2. In an automatic state, the contact could be opened or closed depending on the provisioned trigger. Therefore, issuing an OPR-EXT-CONT command followed by an RLS-EXT-CONT command might not produce any contact state change.

Section	RLS-EXT-CONT Description

3.5.73 RLS-PROTNSW-<OCN_TYPE>: Release Protection Switch (OC3, OC12, OC48, OC192)

(OC192 supported for ONS 15454 only)

This command instructs a SONET NE to release a SONET line protection switch request.

The release of a protection switch request is applicable only to the OPR-PROTNSW protection switch commands, the user-initiated switch protection commands.

Notes:

1. This command is not used for the common control (TCC+ or XC/XCVT) cards. Sending a command on a common control card will generate an IIAC (Input, Invalid Access Identifier) error message. To query the common control card switching commands, use SW-DX-EQPT, ALW-Swdx-EQPT commands.
2. When sending this command on non-SONET (OCN) cards, an IIAC (Input, Invalid Access Identifier) error message should be responded. To use this command on a non-SONET card switching command, use ALW-SWTOPROTN/SWTOWKG-EQPT and INH-SWTOPROTN/SWTOWKG-EQPT commands.
3. When sending this command to query on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message should be responded.
4. When sending this command to a working card that is failed or missing, the SWFA (Status, Working unit Failed) error message should be responded.
5. When sending this command to a protect card that is failed or missing, the SPFA (Status, Protection unit Failed) error message should be responded.
6. When sending this command to a card that is not in protection, the SNPR (Status, Not in Protection State) error message should be responded.
7. Sending this command to an OCN line that is already in clear mode will return a SAMS (Already in Clear Maintenance State) error message.
8. To get the protection switching state (manual, lockout, forced), use the RTRV-COND-ALL or RTRV-ALM-ALL command.

3.5.74 RLS-PROTNSW-<STS_PATH>: Release Protection Switch (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for ONS 15454 only)

This command instructs a SONET NE to release a SONET path protection switch request that was established with the OPR-PROTNSW-<STS_PATH> command. This command assumes that only one user-initiated switch is active per AID.

Notes:

1. This command applies to UPSR configuration only.
2. The VTAID should be working or protect AID only.
3. If sending this command on the Drop AID, a DENY (Invalid AID, should use working/protect AID) message will be returned.
4. To get the protection switching state (manual, lockout, forced), use the RTRV-COND-ALL or RTRV-ALM-ALL command.

Errors	This message generates all the default errors

3.5.76 RLS-SYNCNSW: Release Synchronization Switch

This command releases the previous synchronization reference provided by the OPR-SYNCNSW command. The timing reverts back to its previous mode.

In a non-revertive system, the use of the RLS-SYNCNSW command may not be appropriate. All the switching between synchronization references should be initiated with the OPR-SYNCNSW command.

Once a switch is in effect, a minor alarm “MANSWTOPRI”, Manual Switch to Primary Reference (or Secondary...), will be raised.

3.5.80 RTRV-<STS_PATH>: Retrieve (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for ONS 15454 only)

This command retrieves the attributes associated with an STS path.

The SFBER, SDBER, RVRTV, and RVTM parameters only apply to UPSR.

The path trace message is a 64 character string including the terminating CR (carriage return) and LF (line feed) that is transported in the J1 byte of the SONET STS Path overhead.

The EXPTRC indicates the contents of the expected incoming path trace are provisioned by the user in the ED-STS_PATH command. The TRC indicates the contents of the outgoing path trace message. The INCTRC indicates the contents of the incoming path trace message.

The path trace mode has three modes: OFF, MANUAL, and AUTO. The mode defaults to OFF. The MANUAL mode performs the comparison of the received string with the user entered expected string. The AUTO mode performs the comparison of the present received string with an expected string set to a previously received string. If there is a mismatch, the TIM-P alarm is raised. When the path trace mode is in OFF mode, there is no path trace processing, and all the alarm and state conditions are reset.

When the expected string is queried under the OFF path trace mode, the expected string is a copy of the provisioned string or NULL. When an expected string is queried under the MANUAL path trace mode, the expected string is a copy of the user entered string. When an expected string is queried under the AUTO path trace mode, the expected string is a copy of the acquired received string or NULL if the string has not been acquired.

When the incoming string is queried under the OFF path trace mode, the incoming string is a NULL. When an incoming string is queried under the MANUAL or AUTO path trace mode, the incoming string is a copy of the received string or NULL if the string has not been received.

J1 (EXPTRC) is implemented on the DS1/DS1N, DS3, DS3E/DS3NE, DS3XM, EC1, OC3, OC48AS and OC192.

TRC and INCTRC are supported on DS1(N), DS3(N)E, and DS3XM cards.

Output Format	<p>SID DATE TIME M CTAG COMPLD “<AID>:[LEVEL=<LEVEL>],[SFBER=<SFBER>],[SDBER=<SDBER>], [RVRTV=<RVRTV>],[RVTM=<RVTM>],[EXPTRC=<EXPTRC>], [TRC=<TRC>],[INCTRC=<INCTRC>],[TRCMODE=<TRCMODE>], [TACC=<TACC>]” ; where:</p> <ul style="list-style-type: none"> • <AID> is the access identifier from the “STS” section on page 4-12 • <LEVEL> indicates the rate of the cross connected channel; valid values for <LEVEL> are shown in the “STS_PATH” section on page 4-59, <LEVEL> is optional • <SFBER> identifies the STS path SFBER which only applies to UPSR; <SFBER> defaults to 1E-4 and valid values are shown in the “SF_BER” section on page 4-56, <SFBER> is optional • <SDBER> identifies the STS path SDBER which only applies to UPSR; <SDBER> defaults to 1E-6 and valid values are shown in the “SD_BER” section on page 4-55, <SDBER> is optional • <RVRTV> identifies a revertive mode which only applies to UPSR and defaults to N (non-revertive mode) when a UPSR STSp is created; valid values for <RVRTV> are shown in the “ON_OFF” section on page 4-51 and <RVRTV> is optional • <RVTM> identifies a revertive time which only applies to UPSR and defaults to empty because <RVRTV> is N when a UPSR STSp is created; valid values for <RVTM> are shown in the “REVERTIVE_TIME” section on page 4-55 and <RVTM> is optional • <EXPTRC> indicates the expected path trace message (J1) contents. The EXPTRC is any 64 character string, including the terminating CR (carriage return) and LF (line feed); <EXPTRC> defaults to null when a UPSR STSp is created. <EXPTRC> is a string and is optional • <TRC> identifies the path trace message to be transmitted. The TRC is any combination of 64 characters, including the terminating CR (carriage return) and LF (line feed). The trace byte (J1) continuously transmits a 64 byte string, one byte at a time. A null value defaults to the NE transmitting null characters (Hex 00); <TRC> defaults to null when a UPSR STSp is created. <TRC> is a string and is optional • <INCTRC> identifies the incoming path trace message contents. The INCTRC is any combination of 64 characters; <INCTRC> is a string and is optional • <TRCMODE> indicates the path trace mode, and defaults to the OFF mode when a UPSR STSp is created; valid values for <TRCMODE> are shown in the “TRCMODE” section on page 4-64 and <TRCMODE> is optional • <TACC> defines the STS as a test access port with a selected unique TAP number. The TAP number ranges from 1–999; <TACC> is an integer and is optional.

Output Example	TID-000 1998-06-20 14:30:00 M 001 COMPLD “STS-2-4::LEVEL=STS1,SFBER=1E-3,SDBER=1E-5,RVRTV=Y,RVTM=1.0, EXPTRC=“EXPTRCSTRING”,TRC=“TRCSTRING”, INCTRC=“INCTRCSTRING”,TRCMODE=AUTO,TACC=8” ;
Errors	This message generates all the default errors

3.5.81 RTRV-ALM-<MOD2ALM>:Retrieve Alarm (DS1, E100, E1000, EC1, G1000, OC3, OC12, OC48, OC192, STS1, STS3C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)

(DS1, E1000, EC1, OC192, STS192C supported for ONS 15454 only.

Instructs the NE to retrieve and send the current status of its alarm conditions. The alarm condition or severity to be retrieved can be specified by using the input parameters as a filter.

Notes:

1. VT1-n-n-n replaces PS_VT1-n-n-n for VT1 alarm AID.
2. The [<AIDTYPE>] shows STS1 for STS alarms.

3.5.82 RTRV-ALM-ALL: Retrieve Alarm All

This command instructs the NE to retrieve and send the current status of all active alarm conditions. The alarm condition or severity to be retrieved is specified using the input parameters as a filter.

According to GR-833, the RTRV-ALM-ALL command only reports EQPT, RING, COM, and rr (T1, T3, OCN, EC1, STSN, VT1, and DS1) alarms.

To retrieve all the NE alarms, issue all of the following commands:

RTRV-ALM-ALL
 RTRV-ALM-ENV
 RTRV-ALM-BITS
 RTRV-ALM-RING
 RTRV-ALM-SYNCN

Errors	This message generates all the default errors

3.5.91 RTRV-BLSR: Retrieve Bidirectional Line Switched Ring

This command retrieves the BLSR information of the NE. A two-fiber or four-fiber BLSR can be retrieved.

Output examples:

4F BLSR

“BLSR-43::RINGID=43,NODEID=3,MODE=4F,RVRTV=Y,RVTM=5.0,SRVRTV=Y,SRVTM=5.0,
EASTWORK=FAC-5-1,WESTWORK=FAC-6-1,EASTPROT=FAC-12-1,WESTPROT=FAC-13-1”

2F BLSR

“BLSR-12::RINGID=12,NODEID=2,MODE=2F,RVRTV=Y,RVTM=5.0,EASTWORK=FAC-5-1,
WESTWORK=FAC-6-1”

Error conditions:

1. Only ALL, null, or single “BLSR-#” in the AID in is allowed in this command.
2. A null AID defaults to the AID ALL.
3. If the system fails on getting IOR, a SDBE (Status, Internal Data Base Error) error message will be returned.
4. If the NE does not have BSLR, the TL1 session will return the COMPLD error message with empty information to the user.

3.5.93 RTRV-COND-ALL: Retrieve Condition All

This command retrieves the current standing condition for all entities.

According to GR-833, the RTRV-COND-ALL command only reports EQPT, COM, and rr (T1, T3, OCN, EC1, STSN, VT1, and DS1) alarms.

To retrieve all the NE conditions, issue all of the following commands:

RTRV-COND-ALL
 RTRV-COND-ENV
 RTRV-COND-BITS
 RTRV-COND-RING
 RTRV-COND-SYNCN

RTRV-COND-ALL does not return all conditions that are returned by other, more specific RTRV-COND commands. Instead it returns a subset of those conditions. This is a requirement from section 6.2.1.8.4 of GR-253-CORE. The specific requirements are R6-288, R6-289 and R6-290. Section 6.2.1.8.4 states a retrieval that returns ALL conditions from a node (RTRV-COND-ALL) must omit any conditions that are “same root cause” as other raised conditions. The section also states any retrieval of a subset of the conditions from a node, regardless of how the subsetting occurs, should not omit these “same root cause” conditions. RTRV-COND-STS1, for example, must include “same root cause” conditions in the set it returns, while RTRV-COND-ALL must not.

3.5.99 RTRV-CRS-<STS_PATH>: Retrieve Cross Connect (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for ONS 15454 only)

This command retrieves any connections associated with the entered AID(s) or AID range. The information on both ends is returned along with the type of connection.

Notes:

1. The UPSR STS cross connection can be retrieved by using “&” in the AID fields of this command.

To retrieve a 1-way selector or 2-way selector and bridge cross connection with:

from points: f1, f2

to points: t1

the output will be:

1-way

“f1&f2,t1:CCT,STS3C”

2-way

If retrieved on point f1 or f2, the output format is the same as the 1-way output.

If retrieved on point t1, the output will be:

“t1,f1&f2:CCT,STS3C”

To retrieve a 1-way bridge or 2-way selector and bridge cross connection with:

from point: f1

to points: t1, t2

the output will be:

1-way

“f1,t1&t2:CCT,STS3C”

2-way

“t1&t2,f1:CCT,STS3C”

To retrieve a 1-way subtending UPSR connection or 2-way subtending UPSR cross connection with:

from point: f1, f2

to points: t1, t2

the output will be:

1-way:

“f1&f2,t1&t2:CCT,STS3C”

2-way:

If retrieved on point f1 or f2, the output format is the same as the 1-way output.

If retrieved on point t1 or t2, the output will be:

“t1&t2,f1&f2:CCT,STS3C”

To retrieve a 2-way selector and bridge cross connection with:

ENT-CRS-<STS_PATH>::F1&F2,S1&S2:8::2WAY;

from points: f1, f2 (f1 is the working side, f2 is the protect side)

selector: s1, s2 (s1 is the working side, s2 is the protect side)

the output will be:

If retrieved on point f1 or f2, the output will be:

“f1&f2,s1&s2:CCT,STS3C”

If retrieved on selector s1 or s2, the output will be:

“s1&s2,f1&f2:CCT,STS3C”

2. All a&b AIDs in the TL1 cross connection command are in the format of WorkingAid&ProtectAid.
3. <STS_PATH> does not include STS for the RTRV-CRS command because “STS” is not a standard designator as defined by GR-833 A-2.
4. Both the 1WAYPCA and 2WAYPCA is used to specify a PCA cross connection.
5. The facility AID is only valid on slots with a G1000-4 card.

Category	Cross Connections
Security	Retrieve
Related Messages	DLT-CRS-<STS_PATH> DLT-CRS-VT1 ENT-CRS-<STS_PATH> ENT-CRS-VT1 RTRV-CRS-VT1
Input Format	RTRV-CRS-<STS_PATH>:[<TID>]:<AID>:<CTAG>[:::]; where: <ul style="list-style-type: none">• <AID> identifies STS to check for connection membership. <AID> can be a Facility, STS, or ALL AID. The ALL AID defaults to NE which reports all the existing cross connections of the NE. The STS_PATH does not include STS for the RTRV-CRS command because STS is not a standard designator as defined by GR-833 A-2. <AID> is from the “CrossConnectID” section on page 4-7 and must not be null.
Input Example	RTRV-CRS-STS3C:KENWOOD:STS-6-1:223;
Output Format	SID DATE TIME M CTAG COMPLD “<FROM>,<TO>:<CCT>,<LEVEL>” ; where: <ul style="list-style-type: none">• <FROM> identifies an entity at one end of the STS cross connection and is the AID from the “CrossConnectID” section on page 4-7• <TO> identifies an entity at the other end of the STS cross connection and is the AID from the “CrossConnectID” section on page 4-7• <CCT> identifies the cross connection type; valid values for <CCT> are shown in the “CCT” section on page 4-23• <LEVEL> indicates the rate of the cross connected channel; valid values for <LEVEL> are shown in the “STS_PATH” section on page 4-59
Output Example	TID-000 1998-06-20 14:30:00 M 001 COMPLD “STS-6-1,STS-12-4:2WAY,STS3C” ;
Errors	This message generates all the default errors

3.5.100 RTRV-CRS-VT1: Retrieve Virtual Tributary Cross Connect

This command retrieves the VT cross-connection information.

Notes:

1. The UPSR VT cross connection can be retrieved by using “&” in the AID fields of this command.

To retrieve a 1-way selector or 2-way selector and bridge cross connection with:

from points: f1, f2

to points: t1

the output will be:

1-way:

“f1&f2,t1:CCT,1WAY”

2-way:

If retrieved on point f1 or f2, the output form is the same as the 1-way output.

If retrieved on T1, the output will be:

“t1,f1&f2:CCT”

To retrieve a 1-way bridge or 2-way selector and bridge cross connection with:

from point: f1

to points: t1, t2

the output will be:

1-way:

“f1,t1&t2:CCT,1WAY”

2-way:

“t1&t2,f1:CCT”

To retrieve a 1-way subtending UPSR connection or 2-way subtending UPSR cross connection with:

from point: f1, f2

to points: t1, t2

the output will be:

1-way:

“f1&f2,t1&t2:CCT,1WAY”

2-way:

If retrieved on point f1 or f2, the output format is the same as the 1-way output.

If retrieved on point t1 or t2, the output will be:

“t1&t2,f1&f2:CCT”

To retrieve a 2-way selector bridge cross connection with:

ENT-CRS-VT1::F1&F2,S1&S2:123::2WAY;

from points f1, f2 (f1 is the working side, f2 is the protect side)

selector: s1, s2 (s1 is the working side, s2 is the protect side)

the output will be:

If retrieved on point f1 or f2, the output will be:

“f1&f2,s1&s2:CCT”

If retrieved on selector s1 or s2, the output will be:

“s1&s2,f1&f2:CCT”

2. All a&b AIDs in the TL1 cross connection command are in the format of WorkingAid&ProtectAid
3. Both 1WAYPCA and 2WAYPCA is used to specify a PCA cross connection.

3.5.112 RTRV-NE-SYNCN: Retrieve Network Element Synchronization

This command is used to retrieve the synchronization attributes of the NE.

Notes:

1. Although mixed mode timing is supported in this release, it is not recommended. See the “Mixed Mode Timing Support” section on page 1-7 for more information.
2. The existing external and line modes have the same functionality in all 3.x releases:
 - External mode: the node derives its timing from the BITS inputs.
 - Line mode: the node derives its timing from the SONET line(s).
 - Mixed mode: the node derives its timing from the BITS input or SONET lines.

3.5.113 RTRV-PM-<MOD2>: Retrieve Performance (DS1, EC1, OC3, OC12, OC48, OC192, STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C, T1, T3, VT1)

(DS1, EC1, OC192, STS192C supported for ONS 15454 only)

This command retrieves the values of PM parameters for a specified card type.

<MONTYPE>, <MONLEV>, <MONDAT> and <MONTM> are supported in this release.

<MONLEV> is in the format of LEV-DIRN. Valid values for <DIRN> are shown in the “DIRN” section on page 4-35.

The format of <MONDAT> is MM-DD, where MM (month of the year) ranges from 1–12 and DD (day of the month) ranges from 1–31.

The format for <MONTM> is HH-MM, where HH (hour of the day) ranges from 0–23 and MM (minute of the hour) ranges from 0–59.

Notes:

1. If the <TMPPER> is 1-DAY, <MONTM> is not applicable (null), and is treated as null if <MONTM> is not null.
2. A null value for <MONLEV> defaults to 1-UP.
3. A null value for <MONDAT> defaults to the current date (MM-DD).
4. A null value for <MONTM> defaults to the current time (HH-MM).

The format of <MONDAT> is MM-DD, where MM (month of year) ranges from 1–12 and DD (day of month) ranges from 1–31. <MONDAT> is a string and is optional. • <MONTM> is the beginning time of the day of the PM or storage register period specified in <TMPER>. The format for <MONTM> is HH-MM, where HH (hour of day) ranges from 0–23 and MM (minute of hour) ranges from 0–59. <MONTM> is a string and is optional.
Output Example	TID-000 1998-06-20 14:30:00 M 001 COMPLD “FAC-2-1,DS1-14:CVL,21,COMPL,NEND,BTH,15-MIN,04-11,12-45” ;
Errors	This message generates all the default errors

3.5.114 RTRV-PMMODE-<STS_PATH>: Retrieve Performance Mode of PM Data Collection (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for ONS 15454 only)

This command instructs a SONET NE to send the type of PM mode that has been previously set in the NE. This command can be used to identify whether the PM parameters are Section, Line or Path type, and to identify whether or not the PM are being collected by the NE.

This command returns the categories that are enabled only.

The PM mode and state of an entity is set by using the SET-PMMODE command.

Notes:

1. This near end monitoring of the intermediate-path PM (IPPM) only supports OC-3, OC-12, OC-48, OC-48AS, OC-192, and EC-1 on STS Path.
2. The far end PM data collection is not supported by the current ONS 15454 in this release.
3. This release of software will support only the Path (P) mode type PM parameters with this command, that is, this command will not be applicable for Line (L) and Section (S) mode types. It should be noted that the PM monitoring for Line (L) and Section (S) are supported by the ONS 15454, and the storing PM data is always performed.
4. This command only returns the categories that are enabled (pmstate is ON), and does not return the categories that are disabled (pmstate is OFF).

Errors	This message generates all the default errors

3.5.115 RTRV-PTHTRC-<STS_PATH>: Retrieve Path Trace (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for ONS 15454 only)

This command instructs a SONET NE to retrieve the contents of the SONET path trace message that is transported in the J1 byte of the SONET STS Path.

The path trace message is a 64-character string with the last two characters reserved for the terminating CR (carriage return) and the LF (line feed). The message can be an incoming path trace message, an expected incoming path trace message, or an outgoing path trace message which is inserted into the path overhead of the outgoing signal.

The path trace mode has three modes: OFF, MANUAL, and AUTO. The path trace mode defaults to OFF mode. The MANUAL mode performs the comparison of the received string with the user-entered expected string. The AUTO mode performs the comparison of the present received string with an expected string set to a previously received string. If there is a mismatch, the TIM-P alarm is raised. When the path trace mode is in OFF mode, there is no path trace processing, and all the alarm and state conditions are reset.

When the expected string is queried under the OFF path trace mode, the expected string is a copy of the provisioned string or NULL. When an expected string is queried under the MANUAL path trace mode, the expected string is a copy of the user-entered string. When an expected string is queried under the AUTO path trace mode, the expected string is a copy of the acquired received string or NULL if the string has not been acquired.

When the incoming string is queried under the OFF path trace mode, the incoming string is NULL. When an incoming string is queried under the MANUAL or AUTO path trace mode, the incoming string is a copy of the received string or NULL if the string has not been received.

When the transmitted string is queried under the OFF, MANUAL or AUTO path trace mode, the transmitted string is the provisioned transmit string.

Notes:

1. A null value for the <MSGTYPE> defaults to INCTRC.
2. Only the NEND of the <LOCN> value is supported. A null value of the <LOCN> defaults to NEND.
3. Sending a FEND of the <LOCN> with this command, an “unsupported locn value” error message will display.
4. J1 (EXPTRC/INCTRC) is implemented on the DS1/DS1N, DS3E/DS3NE, DS3XM, EC1, OC3, OC48AS and OC192 cards.
5. TRC is supported only on DS1(N), DS3(N)E, and DS3XM cards.

3.5.118 RTRV-T3: Retrieve T3

This command retrieves the facility properties of a DS3 and a DS3XM card.

(The facilities are on the XTC card for the ONS 15327)

Notes:

1. CTC can set the FMT attribute of a DS3(N)E line to autoprovision to set the framing based on the framing is coming in. This would result in the FMT field being blanked out for a few seconds blanked forever for a preprovisioned DS3(N)E card on CTC.
2. The autoprovision is not considered a valid DS3 framing type. It is used only to trigger an autosense and subsequent autoprovisioning of a valid DS3 framing type (unframed, M23, C-BIT).
3. TL1 does not have the autoprovision mode according to GR-199. TL1 maps/returns the autoprovision to be the unframed framing type.

Errors	This message generates all the default errors	

3.5.124 SET-PMMODE-<STS_PATH>: Set Performance Mode of PM Data Collection (STS1, STS3C, STS6C, STS9C, STS12C, STS24C, STS48C, STS192C)

(STS192C supported for ONS 15454 only)

This command instructs a SONET NE to set the mode and to turn on or off the mode of the PM data collection. The Cisco ONS 15454 is capable of collecting and storing section, line and path PM data.

The PM mode and state of an entity are retrieved by using the RTRV-PMMODE command.

Notes:

1. The near end monitoring of the intermediate-path PM (IPPM) only supports OC-3, OC-12, OC-48, OC-48AS, OC-192, and EC-1 on STS Path.
2. The far end PM data collection is not supported for the ONS 15454 in this release.
3. This release of software will support only the Path (P) mode type PM parameters with this command, that is, this command is not applicable for Line (L) and Section (S) mode types.

Note The PM monitoring for Line (L) and Section (S) are supported by the ONS 15454, and the storing PM data is always performed.

Input Format	SW-DX-EQPT:[<TID>]:<AID>:<CTAG>::[<MODE>][,]; where: <ul style="list-style-type: none">• <AID> identifies the equipment (XC/XCVT) unit in the NE that is to be switched with its mate unit; <AID> is from the “EQPT” section on page 4-11• Valid values for <MODE> are shown in the “CMD_MODE” section on page 4-23
Input Example	SW-DX-EQPT:CISCO:SLOT-1:123::FRCD
Errors	This message generates all the default errors

3.5.128 SW-TOPROTN-EQPT: Switch to Protection Equipment

(Cisco ONS 15454 only)

This command instructs the NE to perform an equipment unit protection switch.

This command is used for non-SONET line cards (e.g. DS1, DS3, DS3XM, and EC1). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection.

This command will switch the traffic from the working card specified in the AID to the protect card.

There is a priority for the switch to protection commands. In a 1:N protection group with N > 1, consider two working cards - A and B. Card A is switched to the protect card with the SW-TOPROTN command. If card B is pulled from the system, the protect card will carry the traffic of card B and card A will raise the FAILTOSW condition and carry traffic. When card B is replaced and the revert timer expires, card B will carry traffic and card A will switch to the protect card. The FAILTOSW condition on card A will be cleared. Note: 1:N protection groups in the system are always revertive.

In a revertive protection group, the unit specified by the AID will raise the standing condition of WKSPPR if the command were executed without an error. In a non-revertive protection group, the unit specified by the AID will raise the transient condition of WKSPPR if the command were executed without an error.

Notes:

1. The default PROTID is the protecting unit if there is only one protection unit per protection group in the NE, otherwise a DENY error message will be responded.
2. This command only supports one value of the <DIRN> parameter - BTH or null. A command with any other value is considered an incorrect use of the command. An IDNV (Input, Data Not Valid) error message will be responded.
3. This command is not used for the common control (TCC+ or XC/XCVT) cards. A command on a common control card will generate an IIAC (Input, Invalid Access Identifier) error message. To use the common control card switching commands, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
4. This command is not used for SONET (OCN) cards. A command on a SONET card will generate an IIAC (Input, Invalid Access Identifier) error message. To use a SONET card switching command, use the OPR-PROTNSW and RLS-PROTNSW commands.
5. If this command is used on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message will be responded.

6. If this command is sent to a missing working card, the SWFA (Status, Working Unit Failed) error message will be responded.
7. If this command is used on a protection card, the IIAC (Input, Invalid Access Identifier) error message will be responded.
8. If sending a mode parameter with a value other than NORM, FRCD, or null, the IDNV (Input, Data Not Valid) error message will be responded.
9. If sending the SW-TOPROTN command to a working card when the working card has raised INHSWPR, the SWLD (Status, Working Unit Locked) error message will be responded.
10. If sending the SW-TOPROTN command to a working card when the protection card has raised INHSWPR, the SPLD (Status, Protection Unit Locked) error message will be responded.
11. If sending the SW-TOPROTN command to an active working card when the protect card is already carrying traffic. This only occurs in a 1:N protection group with N greater than one, the SNVS (Status, Not in Valid State) error message will be responded.
12. If sending the SW-TOPROTN command to an active working card when the protect card is failed or missing, the SPFA (Status, Protection Unit Failed) error message will be responded.
13. If sending this command to a standby working card, the SNVS (Status, Not in Valid State) error message will be responded.

3.5.129 SW-TOWKG-EQPT: Switch to Working Equipment

(Cisco ONS 15454 only)

This command instructs the NE to switch the protected working unit back to working unit.

This command is used for non-SONET line cards (e.g. DS1, DS3, DS3XM, and EC1). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection cards.

This command will switch the traffic from the protection card to the working card specified by the AID.

In a revertive protection group, the unit specified by the AID will clear the standing condition of WKSWPR if the command were executed without an error. In a non-revertive protection group, the unit specified by the AID will raise the transient condition of WKSWBK if the command were executed without an error.

Notes:

1. This command only supports one value of the <DIRN> parameter - BTH or null. A command with any other value is considered an incorrect use of the command. An IDNV (Input, Data Not Valid) error message should be responded
2. This command is not used for the common control (TCC+ or XC/XCVT) cards. A command on a common control card will generate an IIAC (Input, Invalid Access Identifier) error message. To use the common control card switching commands, use the SW-DX-EQPT and ALW-Swdx-EQPT commands.
3. This command is not used for SONET (OCN) cards. A command on a SONET card will generate an IIAC (Input, Invalid Access Identifier) error message. To use a SONET card switching command, use the OPR-PROTNSW and RLS-PROTNSW commands.
4. If this command is used on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message will be responded.
5. If this command is sent to a missing working card, the SWFA (Status, Working Unit Failed) error message will be responded.
6. If this command is used on a protection card, the IIAC (Input, Invalid Access Identifier) error message will be responded.
7. If sending a mode parameter with a value other than NORM, FRCD, or null, the IDNV (Input, Data Not Valid) error message will be responded.
8. If sending the SW-TOWKG command to a working card when the working card has raised INHSSWWKG, the SWLD (Status, Working Unit Locked) error message will be responded.
9. If sending the SW-TOWKG command to a working card when the protection card has raised INHSSWWKG, the SPLD (Status, Protection Unit Locked) error message will be responded.
10. If sending the SW-TOWKG command to an active working card, the SNVS (Status, Not in Valid State) error message will be responded.

TL1 Command Components

This chapter describes the components of TL1 commands and autonomous messages for the Cisco ONS 15454 and the Cisco ONS 15327, Release 3.3, including:

- TL1 default values
- Access identifiers (AIDs)
- Parameter types

4.1 TL1 Default Values

4.1.1 BLSR

Table 4-1 BLSR

BLSR	Default
RVRTV	Y
RVTM	5.0 minutes
SRVRTV	Y
SRVTM	5.0 minutes

4.1.2 Cross Connections

Table 4-2 Cross Connections

Cross Connections	Default
CCT	2WAY for both STSp and VT1 cross connections

4.1.3 Environmental Alarms and Controls

Table 4-3 Environmental Alarms and Controls

Environmental Alarms and Controls	Default
OPR-EXT-CONT	CONNTYPE is set as one provisioned in the respective AID, there is not default for it. It is only used as a filter if entered. DUR is always taken as CONT.
RTRV-ATTR-CONT	There is no default for CONNTYPE. It is only used as a filter if entered.
RTRV-ATTR-ENV	There is no default for both NTFCNCDE and ALMTYPE, which are only used as filters if entered.
RTRV-EXT-CONT	CONNTYPE defaults to the conttype associated with the AID.
SET-ATTR-ENV	NTFCNCDE defaults to NR. ALMTYPE defaults to NULL. ALMMMSG defaults to "Env Alarm Input 1\".

4.1.4 Equipment

Table 4-4 Equipment

Equipment	Default
ALW-SWTOPROTN-EQPT, INH-SWTOPROTN-EQPT and ALW-SWTOWKG-EQPT, ING-SWTOWKG-EQPT	DIRN defaults to BTH.
ENT-EQPT	PROTID, PRTYPE, RVRTV and RVTM defaults to NULL.
SW-DX-EQPT	MODE defaults to NORM.
SW-TOPROTN-EQPT and SW-TOWKG-EQPT	MODE defaults to NORM. DIRN defaults to BTH.

4.1.5 Performance

Table 4-5 Performance

Performance	Default
INIT-REG-<MOD2>	LOCN defaults to NEND (near end).
RTRV-PM-<MOD2>	LOCN defaults to NEND. TMPER defaults to 15 minutes.

Table 4-5 Performance (continued)

Performance	Default
RTRV-TH-<MOD2>	MONTYPE defaults to CVL for OCN, EC1, and DSN. MONTYPE defaults to ESP for STSp MONTYPE defaults to UASV for VT1. MONTYPE defaults to AISSP for the DS1 layer of the DS3XM card. LOCN defaults to NEND. TMRPER defaults to 15 minutes.
SET-PMMODE-<STS_PATH>	PMSTATE defaults to ON.
SET-TH-<MOD2>	LOCN defaults to NEND. TMRPER defaults to 15 minutes.

4.1.6 Ports

Table 4-6 Ports

Ports	Default
OCN Line	DCC defaults to N. TMGREF defaults to N. SYNCMSG defaults to Y. SENDDUS defaults to N. PJMON defaults to 0. SFBER defaults to 1E-4. SDBER defaults to 1E-7. MODE defaults to SONET. PST defaults to OOS.
EC1 Line	PJMON defaults to 0 (zero). LBO defaults to 0-225. RXEQUAL is Y. PST defaults to OOS.
T1 Line (DS1/DS1N)	LINECDE defaults to AMI. FMT defaults to D4. LBO defaults to 0-133. PST defaults to OOS.
T3 Line (DS3, DS3E, DS3NE, DS3XM)	DS3/T3 LINECDE defaults to 0-225. DS3 PST defaults to OOS. DS3E/DS3NE FMT defaults to UNFRAMED. DS3E/DS3NE LINECDE defaults to B3ZS. DS3E/DS3NE LBO defaults to 0-225. DS3 of DS3XM PST defaults to OOS.

4.1.7 SONET Line Protection

Table 4-7 SONET Line Protection

SONET Line Protection	Default
OCN Line Protection	PROTID defaults to the protecting port of the protection group (SLOT-#(OCN)PORT-#). It is a string that can have a maximum length of 32 characters. RVRTV defaults to N (non-revertive mode). RVTM defaults to 5.0 minutes. PSDIRN defaults to UNI.
OPR-PROTNSTW-<OCN>	ST (switch type) is optional and for BLSR protection switch only. ST defaults to BLSR RING switch type.

4.1.8 STS and VT Paths

Table 4-8 STS and VT Paths

STS and VT Paths	Default
STS Path	SFBER, SDBER, RVRTV, and RVTM apply to UPSR STS paths only. SFBER defaults to 1E-4. SDBER defaults to 1E-6. RVRTV defaults to N. RVTM defaults to empty because RVRTV is N when UPSR STSp is created. J1 is implemented on DS1, DS1N, DS3, DS3E, DS3NE, DS3XM, EC1, OC3, OC48AS AND OC192 cards. TRCMODE defaults to the OFF mode. EXPTRC defaults to a copy of the provisioned string or NULL when TRCMODE is OFF mode. EXPTRC defaults to the user entered string when the TRCMODE is MANUAL mode. EXPTRC defaults to a copy of the acquired received string or NULL if the string has not been acquired when the TRCMODE is AUTO mode. INCTRC defaults to the incoming string (NULL) when the TRCMODE is under OFF mode. INCTRC defaults to a copy of the received string or NULL if the string has not been received when the TRCMODE is under MANUAL or AUTO mode.
VT Path	RVRTV, RVTM apply to UPSR VT paths only. RVRTV defaults to N. RVTM defaults to empty because RVRTV is N when UPSR VT1 is created.

4.1.9 Synchronization

Table 4-9 Synchronization

Synchronization	Default
BITS	LINECDE defaults to B8ZS. FMT defaults to ESF. SYNCMSG defaults to Y. PST defaults to OOS.
NE-SYNCN	TMMDE defaults to EXTERNAL. SSMGEN defaults to GEN1. QRES defaults to SAM-AS-DUS. RVRTV defaults to Y. RVTM defaults to 5.0 minutes.
SYNCN	PRI/SEC QRES defaults to ABOVE-STU. PRI STATUS defaults to ACT. SEC STATUS defaults to STBY. THIRD QRES and STATUS defaults to NULL.

4.2 Access Identifiers

The AID code directs an input command to its intended physical or data entity inside the NE. Equipment modules and facilities are typical examples of entities addressed by the access code.

4.2.1 ALL

Table 4-10 ALL for ONS 15454 and ONS 15327

Table 4-11 CrossConnectID for ONS 15454 (continued)

AID	ONS 15454 Pattern
STS	FAC-{1-6,12-17}-{1-4} STS-{1-6,12-17}-ALL STS-{1-6,12-17}-{1,10,-,37} STS-{1-6,12-17}-{1,13,25,37} STS-{1-6,12-17}-{1,25} STS-{1-6,12-17}-{1,4,7,-,22} STS-{1-6,12-17}-{1,4,7,10-46} STS-{1-6,12-17}-{1,4,7,10} STS-{1-6,12-17}-{1,7,13,19,-,43} STS-{1-6,12-17}-{1,7} STS-{1-6,12-17}-{1-12} STS-{1-6,12-17}-{1-48} STS-{1-6,12-17}-{1-6} STS-{1-6,12-17}-{1} STS-{5,6,12,13}-{1,13,25,37-81} STS-{5,6,12,13}-{1,13,25,37} STS-{5,6,12,13}-{1,4,7,10-190} STS-{5,6,12,13}-{1,4,7,10-46} STS-{5,6,12,13}-{1,49,97,145} STS-{5,6,12,13}-{1,7,13,19-187} STS-{5,6,12,13}-{1,7,13,19-43} STS-{5,6,12,13}-{1-192} STS-{5,6,12,13}-{1-48} STS-{5,6,12,13}-{1}

4.2.3 PRSLOT

(ONS 15454 only)

Valid protection slots for the electrical cards

Table 4-12 PRSLOT for ONS 15454

Pattern	Description
NULL	Indicates there is no protection group. Used when trying to delete a protection group.
SLOT-1	The No.1 slot of an NE
SLOT-3	The No.3 slot of an NE
SLOT-5	The No.5 slot of an NE
SLOT-13	The No.13 slot of an NE
SLOT-15	The No.15 slot of an NE
SLOT-17	The No.17 slot of an NE

4.2.4 BITS

4.2.4.1 BITS for ONS 15454

AID for BITS

Table 4-13 BITS for ONS 15454

Pattern	Description
BITS-ALL	BITS AIDS of both BITS-1 and BITS-2 in the RTRV-BITS command
BITS-{1,2}	Individual BITS AID

4.2.4.2 BITS for ONS 15327

AID for BITS

Table 4-14 BITS for ONS 15327

Pattern	Description
BITS-ALL	BITS AIDS of both BITS-1 and BITS-2 in the RTRV-BITS command
BITS-{1,2}	Individual BITS AID

4.2.5 BLSR

4.2.5.1 BLSR for ONS 15454

BLSR AIDs are used to access the specific BLSR of the NE.

Table 4-15 BLSR for ONS 15454

Pattern	Description
ALL	The whole BLSR of the NE
BLSR-{0-9999}	Individual BLSR of the NE

■ Access Identifiers**4.2.5.2 BLSR for ONS 15327**

BLSR AIDs are used to access the specific BLSR of the NE.

Table 4-16 BLSR for ONS 15327

Pattern	Description
ALL	The whole BLSR of the NE
BLSR-ALL	The whole BLSR of the NE
BLSR-{0-9999}	Individual BLSR of the NE

4.2.6 DS1

(ONS 15454 only)

Used to access the DS-1 frame layer of the DS3XM.

Table 4-17 DS1 for ONS 15454

Pattern	Description
DS1-{1-6,12-17}-{1-6}-{1-28} (ONS 15454 only)	DS1 AID for the DX3XM card

4.2.7 ENV**4.2.7.1 ENV for ONS 15454**

The environmental AID for the AIC card

Table 4-18 ENV for ONS 15454

Pattern	Description
ENV-{IN,OUT}-{1-4} 6 Input, 2 Output	Environmental alarm AID. “IN” is used for environmental AID, “OUT” is used for control AID.

4.2.7.2 ENV for ONS 15327

The environmental components within the XTC card.

Table 4-19 ENV for ONS 15327

Pattern	Description
ENV-{IN,OUT}-{1-6} 4 Input, 4 Output	Environmental alarm AID. “IN” is used for environmental AID, “OUT” is used for control AID.

4.2.8 EQPT

4.2.8.1 EQPT for ONS 15454

Equipment AIDs are used to access specific cards. The OC48/OC192 cards can only use the high speed slots (Slot 5, Slot 6, Slot 12, Slot 13).

Table 4-20 EQPT for ONS 15454

Pattern	Description
AIP	The AID for the AIP. It is used for RTRV-INV output only.
ALL	The ALL AID is only used for the RTRV-INV input command. It reports all of the inventory information of the whole NE: AIP, BP, FAN and SLOT-ALL.
BP	The AID for the backplane. It is used for RTRV-INV output only.
FAN	The AID for the fan tray. It is used for RTRV-INV output only.
SLOT-ALL	All of the NE equipment AIDs
SLOT-{1-17}	Individual equipment AID of an NE
SLOT-{1-6,12-17}	Individual equipment AID of the I/O card units or slots

4.2.8.2 EQPT for ONS 15327

Equipment AIDs are used to access specific cards. The I/O cards can only use the I/O slots (Slots 1–4). Slots 5 and 6 are reserved for the XTC cards and Slots 7 and 8 are reserved for MIC cards.

Table 4-21 EQPT for ONS 15327

Pattern	Description
SLOT-ALL	All of the NE equipment AIDs
SLOT-{1-8}	Individual equipment AID of an NE

4.2.9 FACILITY

4.2.9.1 FACILITY for ONS 15454

Facilities AIDs are used to access specific ports.

Table 4-22 FACILITY for ONS 15454

Pattern	Description
FAC-{1-6,12-17}-ALL	All the facilities of an I/O unit or slot
FAC-{1-6,12-17}-{1-12}	Facilities AID for the EC1 and DS3 cards
FAC-{1-6,12-17}-{1-14}	Facilities for the DS1 card
FAC-{1-6,12-17}-{1-4}	Facilities for the four-port OC3 card and four-port OC12 card

Table 4-22 FACILITY for ONS 15454 (continued)

Pattern	Description
FAC-{1-6,12-17}-{1-6}	Facilities for the DS3XM card
FAC-{1-6,12-17}-{1}	Facility AID for the one-port OC12, and OC48AS cards
FAC-{5,6,12,13}-{1}	Facility AID for the OC48/OC192 card. The OC48/OC192 cards can only use the high speed slots (Slot 5, Slot 6, Slot 12, Slot 13).

4.2.9.2 FACILITY for ONS 15327

Facilities AIDs are used to access specific ports.

Table 4-23 FACILITY for ONS 15327

Pattern	Description
FAC-{1-6}-ALL	All the facilities of an I/O unit or slot
FAC-{5-6}-{1-28}	Facilities AID for the DS1 on the XTC card
FAC-{5-6}-{1-3}	Facilities AID for the DS3 on the XTC card
FAC-{1-4}-{1}	Facilities AID for the OC12 and OC48 cards
FAC-{1-4}-{1-4}	Facilities AID for the OC3 card

4.2.10 STS

4.2.10.1 STS for ONS 15454

SONET frame-level AID set

Table 4-24 STS for ONS 15454

Pattern	Description
FAC-{1-6,12-17}-{1-4}	Dynamically allocated STSs of all widths for the G1000-4 card
STS-{1-6,12-17}-ALL	All the STSs of an STS bandwidth on an I/O unit
STS-{1-6,12,-17}-{1,10,-,37}	STS9C AID for an OC48AS and four-port OC12 card
STS-{1-6,12-17}-{1,13,25,37}	STS12C AID for an OC48AS and four-port OC12 card
STS-{1-6,12-17}-{1,25}	STS24C AID for an OC48AS card
STS-{1-6,12-17}-{1,4,7,10-46}	STS3C AID for an OC48AS and four-port OC12 card
STS-{1-6,12-17}-{1,4,7,10}	STS3C AID for a four-port OC3 and one-port OC12 card
STS-{1-6,12-17}-{1,7,13,19-43}	STS6C AID for an OC48AS and four-port OC12 card
STS-{1-6,12-17}-{1-12}	STS1 AID for a one-port OC12, EC1, DS3 and four-port OC3 card
STS-{1-6,12-17}-{1,7}	STS6C AID for one-port OC12 card
STS-{1-6,12-17}-{1-48}	STS1 AID for an OC48AS and four-port OC12 card
STS-{1-6,12-17}-{1-6}	STS1 AID for a DS3XM card

Table 4-24 STS for ONS 15454 (continued)

Pattern	Description
FAC-{1-6,12-17}-{1-4}	Dynamically allocated STSs of all widths for the G1000-4 card
STS-{1-6,12-17}-{1}	STS1 AID for a DS1 card STS3C AID for a four-port OC3 card STS9C AID for a one-port OC12 and four-port OC12 card STS12C AID for a one-port OC12 card STS48C AID for an OC48AS card
STS-{5,6,12,13}-{1,13,25,37-81}	STS12C AID for an OC192 card
STS-{5,6,12,13}-{1,13,25,37}	STS12C AID for an OC48 card
STS-{5,6,12,13}-{1,4,7,10-190}	STS3C AID for an OC192 card
STS-{5,6,12,13}-{1,4,7,10-46}	STS3C AID for an OC48 card
STS-{5,6,12,13}-{1,49,97,145}	STS48C AID for an OC192 card
STS-{5,6,12,13}-{1,7,13,19-187}	STS6C AID for an OC192 card
STS-{5,6,12,13}-{1,7,13,19-43}	STS6C AID for an OC48 card
STS-{5,6,12,13}-{1-192}	STS1 AID for an OC192 card
STS-{5,6,12,13}-{1-48}	STS1 AID for an OC48 card
STS-{5,6,12,13}-{1}	STS48C AID for an OC48 card STS192C AID for the OC192 card
FAC-{1-6,12-17}-{1-4}	Dynamically allocated STSs of all widths for the G1000-4 card

4.2.10.2 STS for ONS 15327

SONET frame-level AID set

Table 4-25 STS for ONS 15327

Pattern	Description
STS-{1-6}-ALL	All the STSs of an STS bandwidth on an I/O unit
STS-{5-6}-{1}	STS1 AID for the DS1 in the XTC card
STS-{5-6}-{2-4}	STS1 AID for the DS3 in the XTC card
STS-{1-4}-{1}	STS48C AID for the OC48 card STS12C for the OC12 card
STS-{1-4}-{1,13,25,37}	STS12C AID for the OC48 card
STS-{1-4}-{1,7,13,19,...43}	STS6C AID for the OC48 card
STS-{1-4}-{1,7}	STS6C AID for the OC12 card
STS-{1-4}-{1,4,7,10,...,46}	STS3C AID for the OC48 card
STS-{1-4}-{1,4,7,10}	STS3C AID for the OC3 and OC12 card
STS-{1-4}-{1-12}	STS1 AID for the OC3 and OC12 card
STS-{1-4}-{1-48}	STS1 AID for the OC48 card

4.2.11 SYN

4.2.11.1 SYN for ONS 15454

Synchronization AIDs

Table 4-26 SYN for ONS 15454

Pattern	Description
SYNC-NE	NE sync AID

4.2.11.2 SYN for ONS 15327

Synchronization AIDs

Table 4-27 SYN for ONS 15327

Pattern	Description
SYNC-NE	NE sync AID

4.2.12 SYN_SRC

4.2.12.1 SYN_SRC for ONS 15454

Synchronization source

Table 4-28 SYN_SRC for ONS 15454

Pattern	Description
BITS-1	Sync source is BITS-1
BITS-2	Sync source is BITS-2
FAC-{1-6,12-17}-{1-4}	Sync source is the optical card (four-port OC3 and four-port OC12) facility
FAC-{1-6,12-17}-{1}	Sync source is the optical card (one-port OC12 and OC48AS) facility
FAC-{5,6,12,13}-{1}	Sync source is the optical card (OC48,OC192) facility
INTERNAL	Set the SYN_SRC to be the system default value. The “Internal” value of the SYN_SRC is only applied for the SYNC-NE AID on the ED-SYNCCN command.
NONE	Set the SYN_SRC value to the default value for BITS-OUT. The “NONE” value of SYN_SRC only applies to the BITS-1 and BITS-2 AID of the ED-SYNCCN command.
SYNC-NE	SYNC-NE source. It is only used in the alarm report or alarm retrieve commands.

4.2.12.2 SYN_SRC for ONS 15327

Synchronization source

Table 4-29 SYN_SRC for ONS 15327

Pattern	Description
FAC-{1-4}-{1-4}	Sync source is the optical card (OC3) facility
FAC-{1-4}-{1}	Sync source is the optical card (OC12, OC48) facility
INTERNAL	Set the SYN_SRC to be the system default value. The “Internal” value of the SYN_SRC is only applied for the SYNC-NE AID on the ED-SYNCN command.
SYNC-NE	SYNC-NE source. It is only used in the alarm report or alarm retrieve commands.
{BITS-1,BITS-2}	BITS-1 or BITS-2 of the synchronization source

4.2.13 SYNC_REF

4.2.13.1 SYNC_REF for ONS 15454

Synchronization AIDs

Table 4-30 SYNC_REF for ONS 15454

Pattern	Description
SYNC-ALL	NE, BITS1 and BITS2 sync AIDs used for the RTRV-SYNCN command only
SYNC-NE	NE sync AID
SYNC-{BITS1,BITS2}	BITS1 and BITS2 sync AIDs

4.2.13.2 SYNC_REF for ONS 15327

Synchronization AIDs

Table 4-31 SYNC_REF for ONS 15327

Pattern	Description
SYNC-ALL	NE, BITS1 and BITS2 sync AIDs used for the RTRV-SYNCN command only
SYNC-NE	NE sync AID
SYNC-{BITS1,BITS2}	BITS1 and BITS2 sync AIDs

4.2.14 SYNC_SW

4.2.14.1 SYNC_SW for ONS 15454

New synchronization reference that will be used

Table 4-32 SYNC_SW for ONS 15454

Pattern	Description
INT	Internal clock. The “INT” value of the syncsw is only applied for the SYNC-NE AID on the OPR-SYNC-SW command.
PRI	Primary timing reference
SEC	Secondary timing reference
THIRD	Third timing reference

4.2.14.2 SYNC_SW for ONS 15327

New synchronization reference that will be used

Table 4-33 SYNC_SW for ONS 15327

Pattern	Description
INT	Internal clock. The “INT” value of the syncsw is only applied for the SYNC-NE AID on the OPR-SYNC-SW command.
PRI	Primary timing reference
SEC	Secondary timing reference
THIRD	Third timing reference

4.2.15 TAP

4.2.15.1 TAP for ONS 15454

Test access path AID which indicates the TAP number

Table 4-34 TAP for ONS 15454

Pattern	Description
{0, 1-999}	Indicates individual TAP number of the NE. The zero (0) TAP number is used in the [<TACC>] field of the ED-rr test access related commands. When [<TACC>] is zero (0), the TAP is deleted.

4.2.15.2 TAP for ONS 15327

Test access path AID which indicates the TAP number

Table 4-35 TAP for ONS 15327

Pattern	Description
{0, 1-999}	Indicates individual TAP number of the NE. The zero (0) TAP number is used in the [<TACC>] field of the ED-rr test access related commands. When [<TACC>] is zero (0), the TAP is deleted.

4.2.16 VT1_5

4.2.16.1 VT1_5 for ONS 15454

Virtual termination AIDs

Table 4-36 VT1_5 for ONS 15454

Pattern	Description
VT1-{1-6,12-17}-1-{1-7}-{1-2}	DS1 card VT AID set
VT1-{1-6,12-17}-{1-12}-{1-7}-{1-4}	EC1, one-port OC12, four-port OC3 card VT AID set
VT1-{1-6,12-17}-{1-48}-{1-7}-{1-4}	OC48AS and four-port OC12 card VT AID set
VT1-{1-6,12-17}-{1-6}-{1-7}-{1-4}	DS3XM card VT AID set
VT1-{5-6,12-13}-{1-192}-{1-7}-{1-4}	OC192 card VT AID set
VT1-{5,6,12,13}-{1-48}-{1-7}-{1-4}	OC48 card VT AID set

■ Parameter Types

4.2.16.2 VT1_5 for ONS 15327

Virtual termination AIDs

Table 4-37 VT1_5 for ONS 15327

Pattern	Description
ALL	All the VT cross connections of the NE. This <ALL> AID is only used for the RTRV-CRS-VT1 command.
VT1-{5-6}-{1-2}-{1-7}-{1-4}	DS1 on XTC card VT AID set
VT1-{5-6}-{1-3}-{1-7}-{1-4}	DS3 on XTC card VT AID Set
VT1-{1-4}-{1-12}-{1-7}-{1-4}	OC3 and OC12 card VT AID set
VT1-{1-4}-{1-48}-{1-7}-{1-4}	OC48 card VT AID set

4.3 Parameter Types

This section provides a description of all message parameter types defined for the TL1 messages used in the ONS 15454 and ONS 15327. The TL1 message descriptions frequently refer to this section.

4.3.1 ATAG Description

The ATAG is used for message sequencing. The number is incremented by one for each autonomous message sent by the NE. The ONS 15454 and ONS 15327 use whole numbers 0000 to 9999.

4.3.2 CTAG Description

The CTAG is included in each command by the user and is repeated by the NE in the response to allow the user to associate the command and response messages.

Note The valid values for a CTAG are strings of up to 6 characters comprised of identifiers (alphanumeric, beginning with a letter) or decimal numerals (a string of decimal digits with an optional non-trailing ".").

4.3.3 TID Description

The TID is the name of the NE where the command is addressed. TID is the Telcordia name for the system.

4.3.4 Parameter Notes

1. If a parameter is set to a value that is inconsistent with something already in the database, and that value is not changed to a consistent value then the command will be denied.
2. If a parameter is set to a value that is consistent with what is already in the database, but another parameter in the same command is incompatible, then the command will be denied.
3. The correct way to issue a command where parameters may be in conflict is to:
 - a. First issue that command and change all relevant parameters to compatible values,
 - b. Then issue the command again to change the target values.

For example, OC-N is syncmsg=y, to change SDH to y, ED-OCN needs to be called to set syncmsg=N, then called again to set SDH=y.
4. The attribute defaults have also been presented under RTRV commands, and they can be retrieved only if the RTRV commands follow the card/entity original provision.
5. The default for an optional field of an ED command is either the provisioned default value or the last provisioned value in the previous ED command.

4.3.5 ALL_MONTYPE

Monitoring type list

Table 4-38 ALL_MONTYPE Values

ALL_MONTYPE Values	Description
AISSP	Alarm Indication Signal Seconds - Path
CVCPP	Coding Violations - CP-Bit Path
CVL	Coding Violations - Line
CVP	Coding Violations - Path
CVS	Coding Violations - Section
CVV	Coding Violations - Section
ESCPP	Errored Seconds - CP- Bit Path
ESL	Errored Seconds - Line
ESP	Errored Seconds - Path
ESS	Errored Seconds - Section
ESV	Errored Seconds - VT Path
FCL	Failure Count - Line
FCP	Failure Count - Path
LOSSL	Loss of Signal Seconds - Line
NPJC-PDET	PPJC-PDET:Negative Pointer Justification
NPJC-PGEN	PPJC-PGEN:Negative Pointer Justification
PPJC-PDET	PPJC-PDET:Positive Pointer Justification

Table 4-38 ALL_MONTYPE Values (continued)

ALL_MONTYPE Values	Description
PPJC-PGEN	PPJC-PGEN:Positive Pointer Justification
PSC	Protection Switching Count
PSC-R	Protection Switching Count - Ring
PSC-S	Protection Switching Count - Span
PSC-W	Protection Switching Count - Working
PSD	Protection Switching Duration
PSD-R	Protection Switching Duration - Ring
PSD-S	Protection Switching Duration - Span
PSD-W	Protection Switching Duration - Working
SASCPP	Severely Errored Framing/AIS Second - CP-Bit Path
SASP	Severely Errored Framing/AIS Seconds Path
SEFS	Severely Errored Framing Seconds
SESCPP	Severely Errored Second - CP-Bit Path
SESL	Severely Errored Second - Line
SESP	Severely Errored Second - Path
SESS	Severely Errored Second - Section
SESV	Severely Errored Second - VT Path
UASCPP	Unavailable Second - CP-Bit Path
UASL	Unavailable Second - Line
UASP	Unavailable Second - Path
UASV	Unavailable Second - VT Path

4.3.6 ALL_THR

Threshold list

Table 4-39 ALL_THR Value

ALL_THR Values	Description
T-AISSL	Alarm Indication Signal Seconds - Path
T-BBEHP	Background Block Errors - High Order Path -VC4/VC4-nc
T-BBEMS	Background Block Errors- Multiplex Section
T-BBERS	Background Block Errors - Regenerator Section
T-CVCPP	Coding Violations - CP-Bit Path
T-CVL	Coding Violations - Line
T-CVP	Coding Violations - Path
T-CVS	Coding Violations - Section

Table 4-39 ALL_THR Value (continued)

ALL_THR Values	Description
T-CVV	Coding Violations - VT Path
T-EBHP	EB - High Order Path
T-EBLP	EB Low Order Path VC3/VC12
T-EBMS	EB Multiplex Section
T-EBRS	EB Regenerator Section
T-ESCPP	Errored Seconds - CP-Bit Path
T-ESHOP	ED High Order Path VC4/VC4-nc
T-ESL	Errored Seconds - Line
T-ESLP	ES Low Order PAth VC3/VC12
T-ESMS	ES Multiplex Section
T-ESP	Errored Seconds - Path
T-ESRS	ES Regenerator Section
T-ESS	Errored Seconds - Section
T-ESV	Errored Seconds - VT Path
T-FCHP	FC High Order Path
T-FCL	Failure Count - Line
T-FCP	Failure Count - Path
T-FCLP	FC Low Order Path
T-FCMS	FC Multiplex Section
T-FCP	Failure Count - Line
T-LOSSL	Loss of Signal Seconds - Line
T-PJNEG	PPJC-PDET:Negative Pointer Justification
T-PJNEG-GEN	PPJC-PGEN:Negative Pointer Justification
T-PJPOS	PPJC-PDET:Positive Pointer Justification
T-PJPOS-GEN	PPJC-PGEN:Positive Pointer Justification
T-PSC	Protection Switching Count
T-PSD	Protection Switching Duration
T-SASCPP	Severely Errored Framing/AIS Second - CP-Bit Path
T-SASP	Severely Errored Framing/AIS Seconds
T-SEFS	Severely Errored Framing Seconds
T-SEFSRS	SEFRS
T-SESCPP	Severely Errored Second - CP-Bit Path
T-SESHP	SES High Order Path
T-SESL	Severely Errored Second - Line
T-SESLP	SES Low Order Path
T-SESMS	SES Multiplex Section

Parameter Types**Table 4-39 ALL_THR Value (continued)**

ALL_THR Values	Description
T-SESP	Severely Errored Second - Path
T-SESRS	SES Regeneration Section
T-SESS	Severely Errored Second - Section
T-SESV	Severely Errored Second - VT Path
T-UASCPP	Unavailable Second - CP-Bit Path
T-UASHP	UA High Order Path
T-UASL	Unavailable Second - Line
T-UASLP	UA Low Order Path
T-UASMS	UA Multiplex Section
T-UASP	Unavailable Second - Path
T-UASV	Unavailable Second - VT Path

4.3.7 BITS_LineBuildOut

BITS Line buildout

Table 4-40 BITS_LineBuildOut Values

BITS_LineBuildOut Values	Description
0–133	BITS line buildout range is 0–133
134–266	BITS line buildout range is 134–266
267–399	BITS line buildout range is 267–399
400–533	BITS line buildout range is 400–533
534–655	BITS line buildout range is 534–655

4.3.8 BLSR_MODE

BLSR mode

Table 4-41 BLSR_MODE Values

BLSR_MODE Values	Description
2F	Two fiber BLSR
4F	Four fiber BLSR

4.3.9 BLSR_TYPE

BLSR type of an OCN port

Table 4-42 BLSR_TYPE Values

BLSR_TYPE Values	Description
EASTPROT	Identifies that the OCN port is an east protecting port
EASTWORK	Identifies that the OCN port is an east working port
WESTPROT	Identifies that the OCN port is a west protecting port
WESTWORK	Identifies that the OCN port is a west working port

4.3.10 CCT

Defines the type of cross-connect to be created

Table 4-43 CCT Values

CCT Values	Description
1WAY	A unidirectional connection from a source tributary to a destination tributary
1WAYDC	UPSR mcast drop with (1-way) continue
1WAYEN	UPSR mcast end node (1-way continue)
2WAY	A bidirectional connection between the two tributaries

4.3.11 CMD_MODE

Command mode is used to force the system to execute a given command regardless of any standing conditions. Normal mode is the default behavior for all commands but the user may specify FRCD to force the system to override a state in which the command would normally be denied.

Table 4-44 CMD_MODE Values

CMD_MODE Values	Description
FRCD	Force the system to override a state in which the command would normally be denied
NORM	Execute the command normally. Do not override any conditions that may make the command fail.

4.3.12 COND_EFF

The affected unit's condition

Table 4-45 COND_EFF Values

COND_EFF Values	Description
CL	Standing condition cleared
SC	Standing condition raised
TC	Transient condition

4.3.13 CONDITION

The condition type of the alarm indication

Table 4-46 CONDITION Values

CONDITION Values	Description
ACOMAN	Alarm cutoff is in manual mode
AIS	External failure - Incoming - Alarm Indication Signal
AIS-L	External failure - Incoming - Alarm Indication Signal - Line
AIS-P	External failure - Incoming - Alarm Indication Signal - Path
AIS-V	External failure - Incoming - Alarm Indication Signal - VT layer
ALM-SUPPRESS	Alarms/Events Suppressed for this Object
APSB	External failure - Incoming - Automatic Protection Switching Channel - Byte failure
APSC	External failure - Incoming - Automatic Protection Switching Channel failure
APSC-IMP	External failure - Incoming - Automatic Protection Switching- Invalid K bytes
APSCCONNLL	External failure - Incoming -Automatic Protection Switching -Connection Loss
APSCDFLTK	External failure - Incoming -Automatic Protection Switching -Default K byte
APSCINCON	External failure - Incoming -Automatic Protection Switching -Inconsistent
APSCM	External failure - Incoming - Automatic Protection Switching Channel - Protection Switching Channel Match failure
APSCNMIS	APS Channel - BLSR - Node Id Mismatch
APSMM	External failure - Incoming -Automatic Protection Switching Channel - Automatic Protection Switch Mode Mismatch
AUTOLSROFF	Internal hardware - Facility Termination Equipment - Automatic Laser Shutdown
AUTORESET	Recovery action - Automatic system Reset

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
AUTOSW-AIS	Automatic Switch - Alarm Indication Signal
AUTOSW-LOP	Automatic Switch - Loss of Pointer
AUTOSW-PDI	Automatic Switch - Payload Defect Indication
AUTOSW-SDBER	Automatic Switch - Signal Degrade Bit Error Rate
AUTOSW-SFBER	Automatic Switch - Signal Fail Bit Error Rate
AUTOSW-UNEQ	Automatic Switch - Unequipped
BKUPMEMP	Internal hardware - Control Equipment - Primary non-volatile Backup Memory failure
BKUPMEMS	Internal hardware - Control Equipment - Secondary non-volatile Backup Memory failure
BLSR-RESYNC	Bidirectional Line Switched Ring - Tables Resynchronized
BLSR-UPDATED	BLSR Multiple Node Table Update Finished
BLSROSYNC	Bidirectional Line Switched Ring - Out of Synchronization
BPV	External failure - Incoming - Bipolar Violation
CARLOSS	External failure - Incoming - Carrier Loss on the LAN
CLDRESTART	Recovery action - Cold Restart
CONCAT	Control Bus Failure
CONTBUS-1	Control Bus Failure - Bus 1
CONTBUS-2	Control Bus Failure - Bus 2
CONTBUS-A-X	TCC/TCC+ card in Slot 7 has lost communication with the card in Slot X
CONTBUS-B-X	TCC/TCC+ card in Slot 11 has lost communication with the card in Slot X
CONTBUS_A	TCC A to Shelf Slot communication failure
CONTBUS_B	TCC B to shelf Slot communication failure
CONTBUS_IO_A	Peer to Peer Slot communication failure
CONTBUS_IO_B	Peer to Peer Slot communication failure
CONTCOM	Internal hardware - Control Equipment - Control Communications equipment failure
CONTEQPT	Internal hardware - Control Equipment failure
CONTR	Internal hardware - Control Equipment - Control processor failure
CTNEQPT	Internal hardware - Interconnection Equipment failure
CTNEQPT-PBXPROT	Failure of the main payload between the protect XC/XCVT card in Slot 10 and the reporting I/O card in Slot X
CTNEQPT-PBXWORK	Failure of the main payload bus between the active XC/XCVT card in Slot 8 and the reporting I/O card in Slot X
CTNEQPT-PBPROT	Interconnection Equipment Failure - Protect XC Payload Bus
CTNEQPT-PBWORK	Interconnection Equipment Failure - Working XC Payload Bus

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
DATAFLT	Internal Error - Software Fault - Data integrity fault
DS3-MISM	DS3 Frame Format Mismatch
E-W-MISMATCH	Procedural Error - Mis-connect East/West Direction
EOC	Embedded Operations Channel (Section DCC) failure
EOC-DOWN	Embedded Operations Channel (Section DCC) failure
EQPT	Internal hardware - Critical alarm caused by equipment failure
EQPT-FAIL	Equipment failure - Board Failure
EQPT-MAC	Equipment failure - Medium Access Control
EQPT-MISS	Replaceable Equipment/Unit is Missing
ESW	External error - Excessive Switching
EXCOL	External failure - Incoming - Excess collisions on the LAN
EXERCISE-RING- FAIL	Exercise Ring Failed
EXERCISE-RING-REQ	Exercise Ring
EXERCISE-SPAN-FAIL	Exercise Span Failed
EXERCISE-SPAN-REQ	Exercise Span
EXERCISING-RING	Exercise Ring Completed
EXERCISING-SPAN	Exercise Span Completed
EXT	Failure detected External to the NE
EXTERR	External Error
EXTR-DROP	BLSR Extra Traffic Dropped
EXTRA-TRAF-PREEMPT	Extra Traffic preempted
FA	Internal hardware - Power failure - Fuse Alarm
FAC	External failure - Incoming - Facility, critical alarm caused by DS3 facility failure
FACTERM	Internal hardware - Facility Termination equipment failure
FAILTROLS	Internal hardware - Failure To Release from protection
FAILTOSW	Internal hardware - Failure To Switch to protection
FAILTOSW-PATH	Failure to switch from the working path to the protection path on an UPSR
FAILTOSWR	Failure to Switch to Protection in a Ring
FAN	Fan Tray failure
FANDEGRADE	Partial Failure of cooling fan tray
FE-AIS	Far-end DS3 node is reporting an AIS
FE-DS1-MULTLOS	Multiple inputs detect a loss on the far-end
FE-DS1-NSA	Non-service affecting failure detected from the far-end DS1
FE-DS1-SA	Service affecting failure detected from the far-end DS1
FE-DS1-SNGLLOS	One of the DS1 inputs on the far-end detects a LOS

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
FE-DS3-NSA	Non-service affecting failure detected from the far-end DS3
FE-DS3-SA	Service affecting failure detected from the far-end DS3
FE-EQPT-NSA	Non-service affecting equipment failure is detected from the far-end DS3
FE-EXERCISING-RING	Far End Exercise Ring
FE-EXERCISING-SPAN	Far End Exercise Span
FE-FRCDWKSWPR-RING	Working facility forced to switch to protection unit - Ring Far end
FE-FRCDWKSWPR-SPAN	Working facility forced to switch to protection unit - Span Far end
FE-IDLE	Far end node detects an idle DS3 signal
FE-LOCKOUTOFPR-ALL	Far end LockOut All Protection Channels of the network
FE-LOCKOUTOFPR-RING	Far End Lockout Of Protection - Ring
FE-LOCKOUTOFPR-SPAN	Far End Lockout Of Protection - Span
FE-LOCKOUTOFWK-RING	Far End Lockout Of Working - Ring
FE-LOCKOUTOFWK-SPAN	Far End Lockout Of Working - Span
FE-LOF	Far end node reports a DS3 loss of frame
FE-LOS	Far end node reports a DS3 loss of signal
FE-MANWKSWPR-RING	Far end Manual Ring Switching command is activated
FE-MANWKSWPR-SPAN	Far end Manual Span Switching command is activated
FE-SD-RING	Far end detected SD on Working channel and issued a Ring Switch
FE-SD-SPAN	Far end detected SD on Working channel and issued a Span Switch
FE-SDPRLF	Far end detected SD on Protection Channel
FE-SF-RING	Far end detected SF on Working channel and issued a Ring Switch
FE-SF-SPAN	Far end detected SF on Working channel and issued a Span Switch
FEBE	External failure - Incoming - Far End Block Error
FEPRLF	External failure - Incoming - Automatic Protection Switching Channel - Far End Protection Line Failure
FORCED-REQ	Forced switch request on facility/equipment
FORCED-REQ-RING	Forced switch request on a Ring
FORCED-REQ-SPAN	Forced switch request on a Span
FRCDWKSWBK	Recovery action - Working facility/equipment forced to switch back to working
FRCDWKSWPR	Recovery action - Working facility/equipment forced to switch to protection unit
FRCDWKSWPR-PATH	Recovery action - Working facility/equipment forced to switch to protection unit - Path
FRCWKBK-R	Working facility/equipment forced to switch back to working - Ring
FRCWKBK-S	Working facility/equipment forced to switch back to working - Span

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
FRCWKBK-S	Working facility/equipment forced to switch back to working - Span
FRCWKPR-R	Working facility/equipment forced to switch to protection unit - Ring
FRCWKPR-S	Working facility/equipment forced to switch to protection unit - Span
FRNGSYNC	Free Running Synchronization mode
FSTSYNC	Fast Start synchronization mode
FULLPASSTHR-BI	Bi-direction Full Pass Through is active
FULLPASSTHR-UNI	Uni-direction Full Pass Through is active
HITEMP	Internal hardware - Equipment failure - High temperature
HLDOVRSYNC	Holdover synchronization mode
IMPROPRMVL	Procedural Error - Improper Removal
INC	Incoming failure condition
INC-ISD	Incoming failure condition - Idle Signal Path
INHMSG	ALM/EVT Messages Suppressed for object & sub-objects
INHMSG-DBCHG	DBCHG Messages Suppressed for entire shelf
INHSWPR	Inhibit switch to protect request on equipment
INHSWWKG	Inhibit switch to working request on equipment
INIT	Recovery action - Initialization initiated
INT	Internal hardware fault or failure
INTER-RING-STARTUP	Far end LockOut All Protection Channels of the network
INTERR	Error Internal to the NE Detected
INTMSGERR	One or more ALM/EVT/DBCHG messages lost
INTRUSION	Security: invalid login with user-ID %s
INTSFT	Internal Error - Software Fault or failure
INVMACADR	Equipment failure - Invalid MAC Address
KB_PASSTHR	K-Byte Pass Through is active
LANOVERFLOW	Traffic storm on LAN. LAN temporarily disabled
LKOUTPR-R	Lockout of Protection - Ring
LKOUTPR-S	Lockout of Protection - Span
LKOUTWK-R	Lockout of working - Ring
LKOUTWK-S	Lockout of working - Span
LOCKOUT-REQ	Lockout switch request on facility/equipment
LOCKOUT-REQ-RING	Lockout switch request on a Ring
LOCKOUT-REQ-SPAN	Lockout switch request on a Span
LOCKOUTOFPR	Recovery action - Lockout of Protection
LOCKOUTOFPR-ALL	Far end LockOut All Protection Channels of the network
LOCKOUTOFPR-PATH	Recovery action - Lockout of Protection - Path

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
LOCKOUTOFWK	Recovery action - Lockout of working
LOF	External failure - Incoming - Loss of Frame
LOP	External failure - Incoming - Loss of Pointer
LOP-P	External failure - Incoming - Loss of Pointer - Path
LOP-V	Loss of pointer at the VT level
LOS	External failure - Incoming - Loss of Signal
LOS-ABBX	VIC loss of audio base band channel X signal
LOS-AFM	VIC loss of Audio FM signal
LOS-VBB	VIC loss of Video Base Band Signal
LOS-VIF	Video Interface Card Loss of Video IF signal
LPBK	Loopback
LPBKDS1FEAC	DS1 loopback signal is received from the far-end due to a Far-End Alarm and Control (FEAC) command
LPBKDS1FEAC-CMD	DS1 loopback command sent by the ONS 15454 to the far-end equipment
LPBKDS3FEAC	DS3 loopback signal is received from the far-end due to a Far-End Alarm and Control (FEAC) command
LPBKDS3FEAC-CMD	DS3 loopback command sent by the ONS 15454 to the far-end equipment
LPBKFACILITY	Loopback, Facility
LPBKM23	Loopback, Facility
LPBKM23-CMD	DS2 Loopback due to Far End Command
LPBKNETWORK	DS2 Loopback Command sent to Far End
LPBKTERMINAL	Loopback, Terminal
MAN	Manually caused abnormal condition
MAN-REQ	Manual Switch Request on facility/equipment
MANRESET	Recovery action - Manual system Reset
MANSWTOFIFTH	Recovery action - Manual synchronization Switch To Fifth reference
MANSWTOFOURTH	Recovery action - Manual synchronization Switch To Fourth reference
MANSWTOINT	Recovery action - Manual synchronization switch to internal clock
MANSWTOPRI	Recovery action - Manual synchronization Switch To Primary reference
MANSWTOSEC	Recovery action - Manual synchronization Switch To Second reference
MANSWTOSIXTH	Recovery action - Manual synchronization Switch To Sixth reference
MANSWTOTHIRD	Recovery action - Manual synchronization Switch To Third reference
MANUAL-REQ-RING	Manual switch request on a Ring
MANUAL-REQ-SPAN	Manual switch request on a Span

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
MANWKBK-R	Manual Switch of working facility/equipment to protection - Ring
MANWKBK-S	Manual Switch of working facility/equipment to protection - Span
MANWKPR-R	Manual Switch of Working facility/equipment to Protection unit -Ring
MANWKPR-S	Manual Switch of Working facility/equipment to Protection unit -Span
MANWKSWBK	Recovery action - Manual Switch of working facility/equipment to protection
MANWKSWPR	Recovery action - Manual Switch of Working facility/equipment to Protection unit
MANWKSWPR-PATH	Manual Switch of working facility/equipment to Protection - Path
MEA	Internal error - Mismatch of Equipment and Attributes
MEM-GONE	Software operations exceed the memory capacity of the TCC/TCC+ card
MEM-LOW	Data generated by software operations is close to exceeding the memory capacity of the TCC/TCC+ card
MFGMEM	Manufacturing Data Memory (EEPROM) Failure
NEW-ROOT	NewRoot trap in BRIDGE-MIB
NORMAL	Normal condition. This condition type is used by the NE to report the returning to normal from a previous off-normal condition
OG	External failure - Outgoing failure condition
OOF	External failure - Incoming - Out of Frame
PATHSEL	External failure - Incoming - Path Selector inability to switch to a valid signal
PDI	External failure - Incoming - Signal Label Mismatch Failure - Payload Defect Indication
PDI-P	External failure - Incoming - Signal Label Mismatch Failure - Payload Defect Indication - Path
PEER-MISM	Peer State Mismatch
PEER-NORESPONSE	Peer card not responding
PLM-P	External failure - Incoming - Signal Label Mismatch Failure - Payload Label Mismatch - Path
PLM-V	Content of the V5 byte in the SONET overhead is inconsistent or invalid
PLUG-IN	Internal hardware - Equipment unit plug-in
PM-TCA	Performance Monitoring - Threshold Crossing Alert
PRC-DUPID	Procedural Error - Duplicate Node ID
PRCDRERR	Procedural Error
PROGFLT	Internal Error - Software Fault - Program failure
PROTNA	Protection unit not available

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
PS	Occurrence of a protection switching event
PWR	Internal hardware - Power failure (detected internal to NE)
PWR-A	Internal hardware - Power failure (detected internal to NE) on slot 7
PWR-B	Internal hardware - Power failure (detected internal to NE) on slot 11
PWRRESTART	Recovery action - Powerfail Restart
RAI	External failure - Incoming - Remote Alarm Indication
RCVR	Internal hardware - Facility Termination equipment - Receiver failure
RCVR-MISS	Facility termination equipment detects a missing receive cable on the DS1 port or a possible mismatch of backplane equipment
RCVRY	Recovery or service protection action has been initiated
RDI-L	External failure - Outgoing - Remote Defect Indication - Line
RDI-P	External failure - Outgoing - Remote Defect Indication - Path
RFI	External failure - Incoming - Remote Failure Indication
RFI-L	External failure - Incoming - Remote Failure Indication - Line
RFI-P	External failure - Incoming - Remote Failure Indication - Path
RFI-V	Upstream failure has occurred at the VT layer
RFLOWCTL	Receive pause frames Threshold crossing alert
RING-MISMATCH	Procedural Error - Mis-connected Ring
RING-SEGMENT	Ring Is Segmented
RING-SW-EAST	Ring switch is active on the East side
RING-SW-WEST	Ring switch is active on the West side
RMON-ALARM	An RMON Alarm
RMON-RESET	RMON histories and alarms have been reset due to chipset reboot
ROVERSUB	Receive packets dropped - internal congestion Threshold crossing alert
SD	Facility has passed BER Threshold for Signal Degrade
SD-L	BER threshold exceeded for Signal Degrade - Line
SD-P	BER threshold exceeded for Signal Degrade - Path
SEF	External failure - Incoming - Severely Errored Frame
SF	Facility has passed BER threshold for Signal Failure
SF-L	BER threshold exceeded for Signal Failure - Line
SF-P	BER threshold exceeded for Signal Failure - Path
SFTWDOWN	Recovery action - Software download in progress
SFTWDOWN-FAIL	Software Download Failed
SLMF	External failure - Incoming - Signal Label Mismatch Failures - SONET
SNTP-HOST	SNTP host not alive condition

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
SPAN-SW-EAST	Span switch is active on the East side
SPAN-SW-WEST	Span switch is active on the West side
SQUELCH	Ring is isolated into two or more segments
SQUELCH-PATH	Squelching - Path level
SSM-DUS	Synchronization Status Messaging - Do Not Use for Synchronization
SSM-FAIL	Synchronization Status Messaging - Failed
SSM-OFF	Synchronization Status Messaging - Off
SSM-PRC	G811 Primary Reference Clock traceable
SSM-PRS	Synchronization Status Messaging - Primary reference source - Stratum 1
SSM-RES	Synchronization Status Messaging - Reserved - quality level set by user
SSM-SMC	Synchronization Status Messaging - SONET minimum clock
SSM-ST2	Synchronization Status Messaging - Stratum 2
SSM-ST3	Synchronization Status Messaging - Stratum 3
SSM-ST3E	Synchronization Status Messaging - Stratum 3E
SSM-ST4	Synchronization Status Messaging - Stratum 4
SSM-STU	Synchronization Status Messaging - Synchronized traceability unknown
SSM-TNC	Synchronization Status Messaging - Transit Node Clock traceable
SWMTXMOD	Switching Matrix Module Failure
SWTOFIFTH	Recovery action - Synchronization Switch To Fifth reference
SWTOFOURTH	Recovery action - Synchronization Switch To Fourth reference
SWTOINT	Recovery action - Synchronization Switch To Internal clock
SWTOPRI	Recovery action - Synchronization Switch To Primary reference
SWTOSEC	Recovery action - Synchronization Switch To Second reference
SWTOSIXTH	Recovery action - Synchronization Switch To Sixth reference
SWTOTHIRD	Recovery action - Synchronization Switch To Third reference
SYNC	External failure - Incoming - Loss of timing on synchronization link
SYNC-FREQ	Synchronization Reference Frequency Out Of Bounds
SYNCLK	Internal hardware - Synchronization unit failure
SYNCEQPT	Internal hardware - Synchronization switching Equipment failure
SYNCFIFTH	External failure - Incoming - Loss of timing on fifth synchronization link
SYNCFOURTH	External failure - Incoming - Loss of timing on fourth synchronization link
SYNCOOS	External failure - Incoming - Loss of timing on all specified synchronization links

Table 4-46 CONDITION Values (continued)

CONDITION Values	Description
SYNCPRI	External failure - Incoming - Loss of timing on primary synchronization link
SYNCSEC	External failure - Incoming - Loss of timing on secondary synchronization link
SYNC SIXTH	External failure - Incoming - Loss of timing on sixth synchronization link
SYNCTHIRD	External failure - Incoming - Loss of timing on third synchronization link
SYSBOOT	Activation of new software
T-UIDAGE	Security: user-ID %s has expired
TFLOWCTL	Transmit pause frames Threshold crossing alert
TIM-P	SONET Trace Identifier message defect - Path
TOP-CHANGE	Topology Change trap in BRIDGE-MIB
TOVERSUB	Transmit packets dropped - internal congestion Threshold crossing alert
TPTFAIL	Transport Layer Failure
TRMT	Internal hardware - Facility Termination equipment - Transmit failure
TRMT-MISS	Facility termination equipment detects a missing transmit cable on the DS1 port or a possible mismatch of backplane equipment
TSI	Internal hardware - Interconnection Equipment - Time slot interchange equipment failure
TUNDERRUN	Buffer Underrun Alarm
UNEQ-P	External failure - Incoming - Signal Label Mismatch Failure - Unequipped - Path
UNEQ-V	VT is receiving an unequipped signal
UNPLUG	Internal hardware - Equipment unit un-plug
WATM-TO	Internal Error - Watchdog Timer Timeout
WKGMEM	Internal hardware - Control Equipment - Working memory failure
WKSWBK	Recovery action - Working facility/equipment switched back to working
WKSWPR	Recovery action - Working facility/equipment switched to protection unit
WRMRESTART	Recovery action - Warm Restart
WTR-RING	Recovery action - SONET ring is in Wait To Restore state
WTR-SPAN	Recovery action - SONET span is in Wait To Restore state

■ Parameter Types

4.3.14 CONT_MODE

Current state of environmental control

Table 4-47 CONT_MODE Values

CONT_MODE Values	Description
OPR	Indicates that the environment control state is CLOSE
RLS	Indicates that the environment control state is OPEN

4.3.15 CONNTYPE

The Environmental control types as defined by Telcordia GR-833-CORE, Issue 2, November 1996, Appendix G.

Table 4-48 CONNTYPE Values

CONNTYPE Values	Description
AIRCOND	Air conditioning
ENGINE	Engine
FAN	Fan
GEN	Generator
HEAT	Heat
LIGHT	Light
MISC	Miscellaneous
SPKLR	Sprinkler

4.3.16 CRS_TYPE

Indicates the cross-connection type

Table 4-49 CRS_TYPE Values

CRS_TYPE Values	Description
STS	Indicates all the STS cross connections
VT	Indicates all the VT1 cross connections

4.3.17 DIRECTION

Transmit and receive directions

Table 4-50 DIRECTION Values

DIRECTION Values	Description
BTH	Both transmit and receive directions
RCV	Receive direction only
TRMT	Transmit direction only

4.3.18 DIRN

Specifies the discriminating level for the requested monitored parameter

Table 4-51 DIRN Values

DIRN Values	Description
DN	Monitored parameter with values equal to or greater than the level of LEV will be reported
UP	Monitored parameter with values equal to or less than the value of LEV will be reported

4.3.19 DS3_FMT

Indicates a DS3 digital signal format

Table 4-52 DS3_FMT Values

DS3_FMT Values	Description
ASYNC	The DS3 digital signal format is ASYNC
CBIT	The DS3 digital signal format is C-BIT
SYNC	The DS3 digital signal format is SYNC
UNFR	The DS3 digital signal format is unframed

4.3.20 DS_LINE_CODE

DS123 Line Code

Table 4-53 DS_LINE_CODE Values

DS_LINE_CODE Values	Description
B3ZS	Bipolar with Three-Zero Substitution

■ Parameter Types

4.3.21 DS_LINE_TYPE

DS123 Line type

Table 4-54 DS_LINE_TYPE Values

DS_LINE_TYPE Values	Description
C-BIT	C-BIT line type applies to DS3XM and DS3E card
M23	M23 line type applies to DS3XM and DS3E card
UNFRAMED	Line Type is unframed. The old DS3 (L3M) and DS3CR cards can only run in unframed mode.

4.3.22 DURATION

Duration

Table 4-55 DURATION Values

DURATION Values	Description
CONTS	Continuous duration

4.3.23 E_LBO

Electrical signal line buildout

Table 4-56 E_LBO Values

E_LBO Values	Description
0-225	Electrical signal buildout range is 0-225
226-450	Electrical signal buildout range is 226-450

4.3.24 ENV_ALM

Environmental alarm types as defined by Telcordia GR-833-CORE, Issue 2, November 1996, Appendix F.

Table 4-57 ENV_ALM Values

ENV_ALM Values	Description
AIRCOMPRESSOR	Air compressor failure
AIRCOND	Air conditioning failure
AIRDRYR	Air dryer failure
BATDSCHRG	Battery discharging
BATTERY	Battery failure

Table 4-57 ENV_ALM Values (continued)

ENV_ALM Values	Description
CLEFAN	Cooling fan failure
CPMAJOR	Centralized power major failure
CPMINOR	Centralized power minor failure
ENGINE	Engine failure
ENGOPRG	Engine operating
EXPLGS	Explosive gas
FIRDETR	Fire detector failure
FIRE	Fire
FLOOD	Flood
FUSE	Fuse failure
GEN	Generator failure
HIAIR	High airflow
HIHUM	High humidity
HITEMP	High temperature
HIWTR	High water
INTRUDER	Intrusion
LWBATVG	Low battery voltage
LWFUEL	Low fuel
LWHUM	Low humidity
LWPRES	Low cable pressure
LWTEMP	Low temperature
LWWTR	Low water
MISC	Miscellaneous
OPENDR	Open door
POWER	Commercial power failure
PUMP	Pump failure
PWR-48	48 Volt power supply failure
RECT	Rectifier failure
RECTHI	Rectifier high voltage
RECTLO	Rectifier low voltage
SMOKE	Smoke
TOXICGAS	Toxic gas
VENTN	Ventilation system failure

4.3.25 ENV_CRTL_MODE

Current state of the environmental control

Table 4-58 ENV_CRTL_MODE Values

ENV_CRTL_MODE Values	Description
CLOSE	Environmental control state is closed
OPEN	Environmental control state is opened

4.3.26 EQPT_TYPE

Identifies the type of equipment being provisioned into a slot

Table 4-59 EQPT_TYPE Values

EQPT_TYPE Values	Description
AIC	The Alarm Interface Controller Card is an optional card which expands system management capabilities for the customer defined alarm I/O and orderwire functionality
AIP	The Alarm Indicator Panel
BP	The Backplane of the NE
DCC	The Data Communications Channel
DS1-14	A 14 port interface card supporting DS1 facilities
DS1N-14	A 14 port interface card supporting DS1 facilities
DS3-12	A 12 port interface card supporting DS3 facilities
DS3-3	A 3 port interface card supporting DS3 facilities
DS3ATM-12	A 12 port interface card supporting DS3 ATM facilities
DS3CR-12	Cost reduced DS3
DS3E-12	A 12 port interface card supporting DS3E facilities
DS3NE-12	A 12 port interface card supporting DS3E facilities
DS3N-12	A 12 port interface card supporting DS3 facilities
DS3XM-6	An interface card that converts six framed DS-3 network connections to 28x6 or 168 VT1.5s
E1000T-2	A 2 port interface card supporting 1000 Base T Ethernet facilities
E100T-12	A 12 port interface card supporting 100 Base T Ethernet facilities
E100T-4	A four port interface card supporting 100 Base T Ethernet facilities.
EC1-12	A 12 port interface card supporting EC1 facilities
EC1N-12	A 12 port interface card supporting EC1 facilities
FTA	The Fan Tray of the NE
FTA1	The Fan Tray 1 of the NE
FTA2	The Fan Tray 2 of the NE

Table 4-59 EQPT_TYPE Values (continued)

EQPT_TYPE Values	Description
G1000-4	A four port G1000 card
MIC-28-3-A	ONS 15327 MIC card A
MIC-28-3-B	ONS 15327 MIC card B
MIC-EXT	ONS 15327 MIC card
MIC-GEN	ONS 15327 MIC card
OC12	An interface card that supports one or more OC-12 (622Mbs) optical facilities
OC12-327	ONS 15327 OC12 card
OC12-4	A four port OC12 card
OC12-IR-1	An interface card that supports one intermediate range OC-12 (622Mbs) optical facilities
OC12-LR-1	An interface card that supports one long range OC-12 (622Mbs) optical facilities
OC12-SR-1	An interface card that supports one short range OC-12 (622Mbs) optical facilities
OC192-LR-1	An interface card that supports one or more OC-192 optical facilities
OC3	An interface card that supports multiple OC-3 (155Mbs) optical facilities
OC3-327	ONS 15327 OC3 card
OC3-IR-4	An interface card that supports four intermediate range OC-3 (155Mbs) optical facilities
OC3-SR-4	An interface card that supports four short range OC-3 (155Mbs) optical facilities
OC3ATM-IR-6	An interface card that supports six intermediate range OC-3 (155Mbs) ATM optical fibers
OC3POS-SR-4	An interface card that supports four short range OC-3 (155Mbs) POS optical facilities
OC48	An interface card that supports one or more OC-48 (10Gbs) optical facilities
OC48-327	ONS 15327 OC48 card
OC48-AS-1	An interface card that supports one short range OC-48 (10Gbs) optical facilities that can be provisioned in any I/O slot
OC48-ELR-1	An interface card that supports one short range OC-48 (2.5Gbs) optical facility
OC48-IR-1	An interface card that supports one intermediate range OC-48 (10Gbs) optical facility
OC48-LR-1	An interface card that supports one long range OC-48 (10Gbs) optical facility
OC48-SR-1	An interface card that supports one short range OC-48 (10Gbs) optical facilities
TCC	The Timing Communication and Control card
XC	A cross-connect card

Parameter Types**Table 4-59 EQPT_TYPE Values (continued)**

EQPT_TYPE Values	Description
XCVT	A Cross-Connect card.
XC10G	XC10G Card
XTC	ONS 15327 XTC card
XTC-DS1-14	ONS 15327 XTC DS1-14 card
XTC-DS1-28	ONS 15327 XTC DS1-28 card
XTC-DS1-56	ONS 15327 XTC DS1-56 card
XTC-DS3-3	ONS 15327 XTC DS3-3 card

4.3.27 EQUIP

Indicates the presence of a plug-in unit

Table 4-60 EQUIP Values

EQUIP Values	Description
EQUIP	The unit is Equipped - present
UNEQUIP	The unit is Unequipped - absent

4.3.28 EQUIPMENT_TYPE

Equipment type

Table 4-61 EQUIPMENT_TYPE Values

EQUIPMENT_TYPE Values	Description
AIC	AIC card
DS1	DS1 card
DS1N	DS1N card
DS3	DS3 card
DS3E	DS3E card
DS3N	DS3N card
DS3NE	DS3NE card
DS3XM	DS3XM card
E1000T	E1000T card
E100T	E100T card
EC1	EC1 card
G1000-4	A four port G1000 card
MIC	ONS 15327 MIC card
MIC-EXT	ONS 15327 XC-EXT card

Table 4-61 EQUIPMENT_TYPE Values (continued)

EQUIPMENT_TYPE Values	Description
OC3	OC3 card
OC12	OC12 card
OC12-4	A four port OC12 card
OC48	OC48 card
OC192	OC192 card
TCC	TCC card
XC	XC card
XCVT	XCVT card
XTC	ONS 15327 XTC card

4.3.29 EXT_RING

Indicates if the ring supports the extended K1/K2/K3 protocol

Table 4-62 EXT_RING Values

EXT_RING Values	Description
N	Indicates the Ring does not support the extended K1/K2/K3 protocol
Y	Indicates the Ring does support the extended K1/K2/K3 protocol

4.3.30 FLOW

Indicates the type of flow control that has been negotiated for an Ethernet port

Table 4-63 FLOW Values

FLOW Values	Description
ASYMMETRIC	Asymmetric flow control
NONE	No flow control

4.3.31 FRAME_FORMAT

The frame format for a T1 port

Table 4-64 FRAME_FORMAT Values

FRAME_FORMAT Values	Description
D4	Frame format is D4
ESF	Frame format is ESF
UNFRAMED	Frame format is unframed

■ Parameter Types

4.3.32 LINE_BUILDOUT

Line buildout

Table 4-65 LINE_BUILDOUT Values

LINE_BUILDOUT Values	Description
0-131	Line buildout range is 0-131
132-262	Line buildout range is 132-262
263-393	Line buildout range is 263-393
394-524	Line buildout range is 394-524
525-655	Line buildout range is 525-655

4.3.33 LINE_CODE

Line code

Table 4-66 LINE_CODE Values

LINE_CODE Values	Description
AMI	Line code value is AMI
B8ZS	Line code value is B8ZS (Bipolar with Three-Zero Substitution)

4.3.34 LOCATION

Identifies the location where the action is to take place

Table 4-67 LOCATION Values

LOCATION Values	Description
FEND	Action occurs on the Far End of the facility
NEND	Action occurs on the Near End of the facility

4.3.35 LPBK_TYPE

Indicates the type of loopback that is to be operated or released

Table 4-68 LPBK_TYPE Values

LPBK_TYPE Values	Description
FACILITY	A type of loopback that connects the incoming received signal immediately following the optical-to-electrical conversion (after descrambling) to the associated transmitter in the return direction
TERMINAL	A loopback that connects the signal that is about to be transmitted (after scrambling but before the electrical-to-optical conversion) is connected to the associated, incoming receiver

4.3.36 MFS_TYPE

Indicates the maximum frame size used by an Ethernet card

Table 4-69 MFS_TYPE Values

MFS_TYPE Values	Description
1548	Normal frame size
JUMBO	Jumbo frame size

4.3.37 MOD2

Line/Path Modifier

Table 4-70 MOD2 Values

MOD2 Values	Description
DS1	DS1 line of a DS3XM card
EC1	EC1 facility
OC3	OC3 facility
OC12	OC12 facility
OC48	OC48 facility
OC192	OC192 facility
STS1	STS1 path
STS3C	STS3C path
STS6C	STS6C path
STS9C	STS9C path
STS12C	STS12C path
STS48C	STS48C path
STS192C	STS192C path

Parameter Types**Table 4-70 MOD2 Values (continued)**

MOD2 Values	Description
T1	T1/DS1 facility/line
T3	T3/DS3 facility/line
VT1	VT1_5 path

4.3.38 MOD2_IO

Facility/Line Modifier

Table 4-71 MOD2_IO Values

MOD2_IO Values	Description
DS1	DS1 line of a DS3XM card
EC1	EC1 facility
G1000	G1000 facility
OC3	OC3 facility
OC12	OC12 facility
OC48	OC48 facility
OC192	OC192 facility
T1	T1/DS1 facility
T3	T3/DS3 facility

4.3.39 MOD2ALM

Alarm type for certain generic TL1 commands

Table 4-72 MOD2ALM Values

MOD2ALM Values	Description
DS1	DS1 alarm
E100	E100 alarm
E1000	E1000 alarm
EC1	EC1 alarm
G1000	G1000 alarm
OC3	OC3 alarm
OC12	OC12 alarm
OC48	OC48 alarm
OC192	OC192 alarm
STS1	STS alarm
STS3C	STS alarm

Table 4-72 MOD2ALM Values (continued)

MOD2ALM Values	Description
STS6C	STS alarm
STS9C	STS alarm
STS12C	STS alarm
STS48C	STS alarm
STS192C	STS alarm
T1	T1 alarm
T3	T3 alarm
VT1	VT1 alarm

4.3.40 MOD2B

Alarm type for certain generic TL1 commands

Table 4-73 MOD2B Values

MOD2B Values	Description
BITS	BITS alarm
COM	Common alarm
DS1	DS1 alarm
E100	E100 alarm
E1000	E1000 alarm
EC1	EC1 alarm
ENV	ENV alarm
EQPT	EQPT alarm
G1000	G1000 alarm
MIC	MIC Alarm (ONS 15327)
MIC-EXT	MIC-EXT Alarm (ONS 15327)
OC3	OC3 alarm
OC12	OC12 alarm
OC48	OC48 alarm
OC192	OC192 alarm
STS1	STS alarm
STS3C	STS alarm
STS6C	STS alarm
STS9C	STS alarm
STS12C	STS alarm
STS24C	STS alarm

Parameter Types**Table 4-73 MOD2B Values (continued)**

MOD2B Values	Description
STS48C	STS alarm
STS192C	STS Alarm
SYNCN	SYNCN alarm
T1	T1 alarm
T3	T3 alarm
TCC	TCC alarm
VT1	VT alarm
XTC	ONS 15327 XTC Alarm

4.3.41 MOD_PATH

STS/VT Path Modifier

Table 4-74 MOD_PATH Values

MOD_PATH Values	Description
STS1	STS1 path
STS3C	STS3C path
STS6C	STS6C path
STS9C	STS9C path
STS12C	STS12C path
STS 24C	STS 24C path
STS48C	STS48C path
STS192	STS192C path
VT1	VT1_5 path

4.3.42 MOD_PORT

Move from MOD2_IO without DS1

Table 4-75 MOD_PORT Values

MOD_PORT Values	Description
EC1	EC1 port
G1000	G1000 port
OC3	OC3 port
OC12	OC12 port
OC48	OC48 port
OC192	OC192 port
T1	T1/DS1 port
T3	T3/DS3 port

4.3.43 MOD_TACC

Test Access Modifier

Table 4-76 MOD_TACC Values

MOD_TACC Values	Description
DS1	DS1 line of a DS3XM card
STS1	STS1 path
STS3C	STS3C path
STS6C	STS6C path
STS9C	STS9C path
STS12C	STS12C path
STS24C	STS24C path
STS48C	STS48C path
STS192C	STS192C path
T1	T1/DS1 facility/line
T3	T3/DS3 facility/line
VT1	VT1_5 path

4.3.44 MODIFIER

Modifier for certain TL1 commands that are generic in syntax

Table 4-77 MODIFIER Values

MODIFIER Values	Description
BITS	BITS command modifier
EQPT	Equipment command modifier
OC3	OC-3 command modifier
OC12	OC-12 command modifier
OC48	OC-48 command modifier
OC192	OC-192 command modifier
STS1	STS-1 command modifier
STS3C	STS-3C command modifier
STS9C	STS-9C command modifier
STS12C	STS-12C command modifier
STS24C	STS-24C command modifier
STS48C	STS-48C command modifier
SYNCR	Synchronization command modifier
T3	T3/DS3 command modifier

4.3.45 MODULE_OP

Module operation mode

Table 4-78 MOD_OP Values

MODULE_OP Values	Description
CLR	Clear switch operation mode
LOCKDX	Lock duplex switch operation mode
LOCKPRT	Lock switch to protection operation mode
LOCKWKG	Lock switch to working operation mode
RST	Reset operation mode
SWITCHDX	Switch duplex operation mode
SWITCHPRT	Switch to protection operation mode
SWITCHWKG	Switch to working operation mode
UNLOCKDX	Unlock duplex switch operation mode
UNLOCKPRT	Unlock switch to protection operation mode
UNLOCKWKG	Unlock switch to working operation mode
UPGRADE	Upgrade operation mode

4.3.46 MSGTYPE

Type of trace message

Table 4-79 MSGTYPE Values

MSGTYPE Values	Description
EXPTRC	Expected incoming Path trace message
INCTRCC	Incoming Path trace message
TRC	Outgoing Path trace message

4.3.47 MUX_TYPE

BLSR Extension Byte

Table 4-80 MUX_TYPE Values

MUX_TYPE Values	Description
E2	E2 Byte (orderwire)
F1	F1 Byte (user)
K3	K3 Byte
Z2	Z2 Byte

4.3.48 NOTIF_CODE

The 2-character Notification Code associated with an autonomous message

Table 4-81 NOTIF_CODE Values

NOTIF_CODE Values	Description
CL	The condition causing the alarm has Cleared
CR	A Critical alarm
MJ	A Major alarm
MN	A Minor alarm
NA	The condition is Not Alarmed
NR	The alarm is not reported

■ Parameter Types

4.3.49 OCN_4F

Modifier used to differentiate the various levels of OC-N in 4F BLSR

Table 4-82 OCN_4F Values

OCN_4F Values	Description
OC48	Optical Carrier level-48 (2.4Gbs)
OC192	Optical Carrier level-192 (10Gbs)

4.3.50 OCN_BLSR

Modifier used to differentiate the various levels of OC-N in BLSR

Table 4-83 OCN_BLSR Values

OCN_BLSR Values	Description
OC12	Optical Carrier level-12 (662Mbs)
OC48	Optical Carrier level-48 (2.4Gbs)
OC192	Optical Carrier level-192 (10Gbs)

4.3.51 OCN_MONTYPE

OCN monitor type

Table 4-84 OCN_MONTYPE Values

OCN_MONTYPE Values	Description
CVL	Coding Violation - Line
ESL	Errored Second - Line
PJNEG	PPJC-PDET:Negative Pointer Justification
PJPOS	PPJC-PFEN:Negative Pointer Justification
PSC	Protection Switching Count
PSD	Protection Switching Duration
SEFS	Severely Errored Framing Seconds
UASL	Unavailable Second -Line

4.3.52 OCN_TYPE

Modifier used to differentiate the various levels of OC-N in the ENT/ED/DLT/RTRV commands

Table 4-85 OCN_TYPE Values

OCN_TYPE Values	Description
OC3	Optical Carrier level-3 (155Mbs)
OC12	Optical Carrier level-12 (622Mbs)
OC48	Optical Carrier level-48 (2.4Gbs)
OC192	Optical Carrier level-192 (10Gbs)

4.3.53 ON_OFF

Disable or Enable an attribute

Table 4-86 ON_OFF Values

ON_OFF Values	Description
N	Disable the attribute
Y	Enable the attribute

4.3.54 OPTICAL_MODE

The facility optical mode

Table 4-87 OPTICAL_MODE Values

OPTICAL_MODE Values	Description
SDH	The SDH optical mode the European format
SONET	The SONET optical mode the American format

4.3.55 OPTICS

The type of gigabyte Ethernet optics in place

Table 4-88 OPTICS Values

OPTICS Values	Description
1000_BASE_LX	1000 Base LX
1000_BASE_SX	1000 Base SX
1000_BASE_ZX	1000 Base ZX
UNKNOWN	Unknown Optical Type
UNPLUGGED	Unplugged

■ Parameter Types

4.3.56 PM_MODE

Identifies the type of PM parameters. Only P type is supported.

Table 4-89 PM_MODE Values

PM_MODE Values	Description
I	Transport Intermediate Node PM parameters
L	Transport Line PM parameters
NONE	No PM parameters are being stored for the entity
P	Transport Path PM parameters
S	Transport Section PM parameters
SEG	Transport Path Segment PM parameters (e.g., ISDN BRA)

4.3.57 PM_STATE

Directs the named PM mode type - path (P) state

Table 4-90 PM_STATE Values

PM_STATE Values	Description
OFF	Disable the mode
ON	Enable the mode

4.3.58 PRIVILEGE

Security level

Table 4-91 PRIVILEGE Values

PRIVILEGE Values	Description
MAINT	Maintenance security level
PROV	Provisioning security level
RTRV	Retrieve security level
SUPER	Superuser security level

4.3.59 PRODUCT_TYPE

Product (NE) type

Table 4-92 PRODUCT_TYPE Values

PRODUCT_TYPE Values	Description
15327	Cisco ONS 15327 NE
15454	Cisco ONS 15454 NE
UNKNOWN	Unknown product type

4.3.60 PROTECTION_GROUP

Protection group type

Table 4-93 PROTECTION_GROUP Values

PROTECTION_GROUP Values	Description
1-1	1 to 1 protection group
1-N	1 to N protection group

4.3.61 PST

Primary State. This parameter indicates the current overall service condition of an entity.

Table 4-94 PST Values

PST Values	Description
IS	In-service
OOS	Out-of-Service

4.3.62 PSTQ

Primary State Qualifier. This parameter qualifies PST. If the entity is in-service, PSTQ indicates whether it is totally or partially in service. If the entity is out-of-service, PSTQ indicates whether this is due to an external management command or is determined by the NE itself based on an event that occurred in the NE.

Table 4-95 PSTQ Values

PSTQ Values	Description
ANR	(Abnormal)—The entity is allowed to perform all of its provisioned functions, but it is capable of performing only part of (but not none) these functions or of performing these functions at a degraded level. This value of PSTQ qualifies the PST value of IS.
ANRST	(Abnormal and Restricted)—The entity is capable of performing only part (but not none) of its provisioned functions or of performing these functions at a degraded level. This value of PSTQ qualifies the PST value of IS.
AU	(Autonomous)—The entity is incapable of performing any of its provisioned functions, and there is no external administrative restriction inhibiting the entity from performing this functions. This value of PSTQ qualifies the PST value of OOS.
AUMA	(Autonomous and Management)—The entity is incapable of performing any of its provisioned functions, and at the same time has been intentionally suspended from performing all of its provisioned functions. This value of PSTQ qualifies the PST value of OOS.
AURST	(Autonomous and Restricted)—The entity is incapable of performing any of its provisioned functions and at the same time being intentionally suspended from performing part of its provisioned functions. This value of PSTQ qualifies the PST value of OOS.
MA	(Management)—The entity is intentionally suspended by the external management command from performing all of its provisioned functions. This value of PSTQ qualifies the PST value of OOS.
MAANR	(Management and Abnormal)—The entity is operationally capable of performing only part of its provisioned functions or at a degraded level, and at the same time is intentionally suspended from performing all of its provisioned functions. This value of PSTQ qualifies the PST value of OOS.
NR	(Normal)—This value implies that the entity is normally in service. It is capable and allowed to provide all of its provisioned functions. This value of PSTQ qualifies the PST value of IS.
RST	(Restricted)—The entity is capable of performing all of its provisioned functions but is intentionally suspended from performing part of, but not all, these functions. This value of PSTQ qualifies the PST value of IS.

4.3.63 REVERTIVE_TIME

Revertive time

Table 4-96 REVERTIVE_TIME Values

REVERTIVE_TIME Values	Description
0.5 – 12.0	Revertive time is 0.5 to 12.0 minutes

4.3.64 RNG_TYPE

Defines the type of ring that is to be deployed for this path

Table 4-97 RNG_TYPE Values

RNG_TYPE Values	Description
BLSR2	2-Fiber Bidirectional Line Switched Ring
BLSR4	4-Fiber Bidirectional Line Switched Ring
UPSR	Unidirectional Path Switched Ring

4.3.65 SD_BER

The threshold for declaring Signal Degrade on a facility or path

Table 4-98 SD_BER Values

SD_BER Values	Description
1E-5–1E-9	SDBER is the 1E-5–1E-9

4.3.66 SDCC_MODE

Enables or disables the Section Data Communications Channel (SDCC) for the specified facility

Table 4-99 SDCC_MODE Values

SDCC_MODE Values	Description
N	Section Data Communications Channel is disabled for this facility
Y	Section Data Communications Channel is enabled for this facility

■ Parameter Types

4.3.67 SERV_EFF

Indicates the effect of the alarm on service

Table 4-100 SERV_EFF Values

SERV_EFF Values	Description
NSA	The condition is Non-Service Affecting
SA	The condition is Service Affecting

4.3.68 SF_BER

The threshold for declaring Signal Failure on a facility or path

Table 4-101 SF_BER Values

SF_BER Values	Description
1E-3–1E-5	SFBER is the 1E-3–1E-5

4.3.69 SIDE

The role the unit is playing in the protection group

Table 4-102 SIDE Values

SIDE Values	Description
PROT	The entity is the protection unit in the protection group
WORK	The entity is a working unit in the protection group

4.3.70 SST

Secondary State. This parameter provides additional information pertaining to PST and PSTQ. Values for this state included here are a subset of the list in the GR document.

Table 4-103 SST Values

SST Values	Description
ACT	Active
FLT	Fault
LPBK	Loopback
MEA	Mismatch of Equipment and Attributes
STBYH	Standby Hot
STBYI	Standby Inhibited
STBYS	Standby Switched

Table 4-103 SST Values

SST Values	Description
SWDL	Software Downloading
UAS	Unassigned
UEQ	Unequipped
WKR	Working

4.3.71 STATE

The provisioned state of the equipment unit or facility

According to the Telcordia State Model which describes the current state of an NE defined in GR-1093-CORE, the ONS 15454's Equipment state is mapped (roughly) to the Telcordia State Model.

The optional [] field in the autonomous messages REPT RMV EQPT and REPT RST EQPT can be populated with the values below.

The [] field is populated by the combination of the PST-PSTQ-SST. For the REPT RMV rr and REPT RST rr, the optional [] field will be populated with just PST.

Table 4-104 STATE Values

STATE Values	Description
IS-NR-ACT	This Telcordia State Model is mapped to the 15454 State of ACTIVE.
IS-NR-STBYH	This Telcordia State Model is mapped to the 15454 State of STANDBY.
OOS-AU-FLT	This Telcordia State Model is mapped to the 15454 State of FAILED.
OOS-AU-MEA	This Telcordia State Model is mapped to the 15454 State of MISMATCH.
OOS-AUMA-UEQ	This Telcordia State Model is mapped to the 15454 State of NOT_PRESENT.
OOS-MA-UAS	This Telcordia State Model is mapped to the 15454 State of LOADING.

4.3.72 STATUS

Indicates whether the unit in the protection pair is active or standby

Table 4-105 STATUS Values

STATUS Values	Description
ACT	The entity is the active unit on the shelf
NA	Status is unavailable
STBY	The entity is the standby unit on the shelf

■ Parameter Types

4.3.73 STM_TYPE

The Synchronous Transport Mode of the NE

Table 4-106 STM_TYPE Values

STM_TYPE Values	Description
SDH	The NE is operating in Synchronous Digital Hierarchy mode
SONET	The NE is operating in Synchronous Optical Network mode

4.3.74 STS_MAP

The payload mapping of a terminated STS path

Table 4-107 STS_MAP Values

STS_MAP Values	Description
ASYNC	The STS path is carrying an Asynchronous DS3 payload
ATM	The STS path is carrying ATM cells
NONE	The STS path is not terminated

4.3.75 STS_MONTYPE

STS Monitor Type

Table 4-108 STS_MONTYPE Values

STS_MONTYPE Values	Description
CVP	Coding Violation - P
ESP	Errored Second - Path
SESP	Severely Errored Second - Path
UASP	Unavailable Second - Path

4.3.76 STS_PATH

Modifier for some of the STS commands. This table does not include STS for the RTRV-CRS command, because STS is not a standard designator.

Table 4-109 STS_PATH Values

STS_PATH Values	Description
STS1	Synchronous Transport Signal level-1 (51 Mbs)
STS3C	Synchronous Transport Signal level-3 Concatenated (155 Mbs)
STS6C	Synchronous Transport Signal level-6 Concatenated (310 Mbs)
STS9C	Synchronous Transport Signal level-9 Concatenated (465 Mbs)
STS12C	Synchronous Transport Signal level-12 Concatenated (622 Mbs)
STS24C	Synchronous Transport Signal level-24 Concatenated (1240 Mbs)
STS48C	Synchronous Transport Signal level-48 Concatenated (2488 Mbs)
STS192C	Synchronous Transport Signal level-192 (9952 Mbs)

4.3.77 SWITCH

The type of switch to be initiated

Table 4-110 SWITCH Values

SWITCH Values	Description
FRCD	Force a switch unless another FRCD or LOCKOUT is in effect
LOCKOUT	Locks the facility out of switching. The system cannot switch to the protect facility to carry service.
MAN	Requests a manual switch of the facility

4.3.78 SWITCH_TYPE

BLSR switch type

Table 4-111 SWITCH_TYPE Values

SWITCH_TYPE Values	Description
RING	BLSR ring switch type
SPAN	BLSR span switch type

4.3.79 SYNC_CLOCK_REF_QUALITY_LEVEL

Clock Source Quality Level

Table 4-112 SYNC_CLOCK_REF_QUALITY_LEVEL Values

SYNC_CLOCK_REF_QUALITY_LEVEL Values	Description
DUS	Don't Use for Synchronization
PRS	Primary Reference Source, Stratum 1 Traceable
RES	Reserved for network synchronization use
SMC	SONET Minimum Clock Traceable
ST2	Stratum 2 Traceable
ST3	Stratum 3 Traceable
ST3E	Stratum 3E Traceable (2nd generation only)
ST4	Stratum 4 Traceable
STU	Synchronized, Traceability Unknown
TNC	Transit Node Clock (2nd generation only)

4.3.80 SYNC_GENERATION

Synchronization status message set generation

Table 4-113 SYNC_GENERATION Values

SYNC_GENERATION Values	Description
GEN1	First generation SSM set
GEN2	Second generation SSM set

4.3.81 SYNC_MODE

Synchronization mode

Table 4-114 SYNC_MODE Values

SYNC_MODE Values	Description
FRNG	Reset operation mode
FST	Reset operation mode
HLDOVR	Reset operation mode
NORM	Reset operation mode

4.3.82 SYNC_QUALITY_LEVEL

Reserved for network synchronization quality level

Table 4-115 SYNC_QUALITY_LEVEL Values

SYNC_QUALITY_LEVEL Values	Description for Generation-1	Description for Generation-2
ABOVE-PRS	Better than Primary Reference Source	Better than Primary Reference Source
ABOVE-STU	Between STU and PRS	Between STU and PRS
ABOVE-ST2	Between ST2 and STU	Between ST2 and STU
ABOVE-TNC	—	Between TNC and ST2
ABOVE-ST3E	—	Between ST3E and TNC
ABOVE-ST3	Between ST3 and ST2	Between ST3 and ST3E
ABOVE-SMC	Between SMC and ST3	Between SMC and ST3
ABOVE-ST4	Between ST4 and SMC	Between ST4 and SMC
BELOW-ST4	Below ST4 but still usable	Below ST4 but still usable
SAME-AS-DUS	Disable the RES message by equating it to DUS	Disable the RES message by equating it to DUS

4.3.83 T1_MONTYPE

T1 monitor type

Table 4-116 T1_MONTYPE Values

T1_MONTYPE	Description
CVL	Coding Violation - Line
CVP	Coding Violation - Path
ESL	Errored Second - Line
SASP	Severely Errored Framing/AIS Seconds
SESL	Severely Errored Second - Line
SESP	Severely Errored Second - Path
UASP	Unavailable Second - Path

Parameter Types**4.3.84 T3_MONTYPE**

T3 monitor type

Table 4-117 T3_MONTYPE Values

T3_MONTYPE Values	Description
CVL	Coding Violation - Line
ESL	Errored Second - Line
SESL	Severely Errored Second - Line

4.3.85 TACC_MODE

Test access mode

Table 4-118 TACC_MODE Values

TACC_MODE Values	Description
LOOPE	Indicates to split both the A and B paths, connect the line incoming from E direction to the line outgoing in the E direction, and connect this looped configuration to the FAD. The line outgoing in the F direction shall have a QRS connected, and the line incoming from the F direction shall be terminated by the nominal characteristic impedance of the line.
LOOPF	Indicates to split both the A and B paths, connect the line incoming from F direction to the line outgoing in the F direction, and connect this looped configuration to the FAD. The line outgoing in the E direction shall have a QRS connected, and the line incoming from the E direction shall be terminated by the nominal characteristic impedance of the line.
MONE	Indicates that a monitor connection is to be provided from the FAD to the A transmission path of the accessed circuit.
MONEF	Indicates that a monitor connection is to be provided from the FAD1 to a DFAD, or the odd pair of a FAP, to the A transmission path and from FAD2 of the same DFAD, or the even pair of a FAP, to the B transmission path of the accessed circuit.
MONF	Indicates that a monitor connection is to be provided from the FAD to the B transmission path of the accessed circuit.
SPLTA	Indicates that a connection is to be provided from both the E and F sides of the A transmission path of the circuit under test to the FAD and split the A transmission path.
SPLTB	Indicates that a connection is to be provided from both the E and F sides of the B transmission path of the circuit under test to the FAD and split the B transmission path.
SPLTE	Indicates to split both the A and B paths and connect the E side of the accessed circuit to the FAD. The line outgoing in the F direction shall have a QRS connected, and the line incoming from the F direction shall have a QRS connected, and the line incoming from the E direction shall be terminated by the nominal characteristic impedance of the line.

Table 4-118 TACC_MODE Values (continued)

TACC_MODE Values	Description
SPLTEF	Indicates to split both the A and B paths, and connect the E side of the accessed circuit to FAD1 and the F side to FAD2.
SPLTF	Indicates to split both the A and B paths, and connect the F side of the accessed circuit to the FAD. The line outgoing in the E direction shall have a QRS connected, and the line incoming in the E direction shall have a QRS connected, and the line incoming from the E direction shall be terminated by the nominal characteristic impedance of the line.

4.3.86 TIMING_MODE

Timing mode for the current node

Table 4-119 TIMING_MODE Values

TIMING_MODE Values	Description
EXTERNAL	The node derives its clock from the BITS input
LINE	The node derives its clock from the SONET lines
MIXED	The node derives its clock from the mixed timing mode

4.3.87 TMG_REF

Identifies whether or not this entity is the Timing Reference for its group. For equipment, it identifies the facility that is supplying the timing reference. For interface groups, it identifies the card that is supplying the main timing reference.

Table 4-120 TMG_REF Values

TMG_REF Values	Description
N	This facility or card is not a timing reference
Y	This facility or card is a timing reference

4.3.88 TMPER

Performance parameter

Table 4-121 TMPER Values

TMPER Values	Description
15-MIN	Performance Parameter Accumulation Interval Length - Every 15 Minutes
1-DAY	Performance Parameter Accumulation Interval Length - Every 24 Hours

■ Parameter Types

4.3.89 TRCMODE

Path Trace Mode

Table 4-122 TRCMODE Values

TRCMODE Values	Description
AUTO	Use the previously received path trace string as the expected string
AUTO-NO-AIS	Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIMP detected
MAN	Use the provisioned expected string as the expected string
MAN-NO-AIS	Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIMP detected
OFF	Turn off path trace capability. Nothing will be reported

4.3.90 UNI_BI

Unidirectional and Bidirectional switch operations

Table 4-123 UNI_BI Values

UNI_BI Values	Description
BI	Bidirectional protection switching
UNI	Unidirectional protection switching

4.3.91 USE_DST

Identifies whether Daylight Saving Time is recognized in the area where this NE is deployed.

Table 4-124 USE_DST Values

USE_DST Values	Description
N	Daylight Saving Time is not recognized
Y	Daylight Saving Time is recognized

4.3.92 VALIDITY

Response validity

Table 4-125 VALIDITY Values

VALIDITY Values	Description
COMPL	Complete Response
PRTL	Partial Response

4.3.93 VT1_5_MONTYPE

VT1_5 Monitor Type

Table 4-126 VT1_5_MONTYPE Values

VT1_5_MONTYPE Values	Description
CVV	Coding Violation - VT Path
ESV	Errored Seconds - VT Path
SESV	Severely Errored Seconds - VT Path
UASV	Unavailable Second - VT Path

■ Parameter Types

Ring Provisioning

This chapter provides information and sample procedures for setting up STS or VT circuits over existing unidirectional path switched ring (UPSR) and bidirectional line switch ring (BLSR) configurations using TL1, including:

- UPSR topology
- UPSR cross-connections
- Ring-to-ring interconnection
- 1WAY drop and continue

Note

Because the ONS 15454/ONS 15327 implements logical UPSR, there are no defined east and west ports. Instead, the east STS path for one circuit can exit a different port than the east STS path of another circuit, even though the west STS paths for both circuits may share the same port.

5.1 UPSR Topology

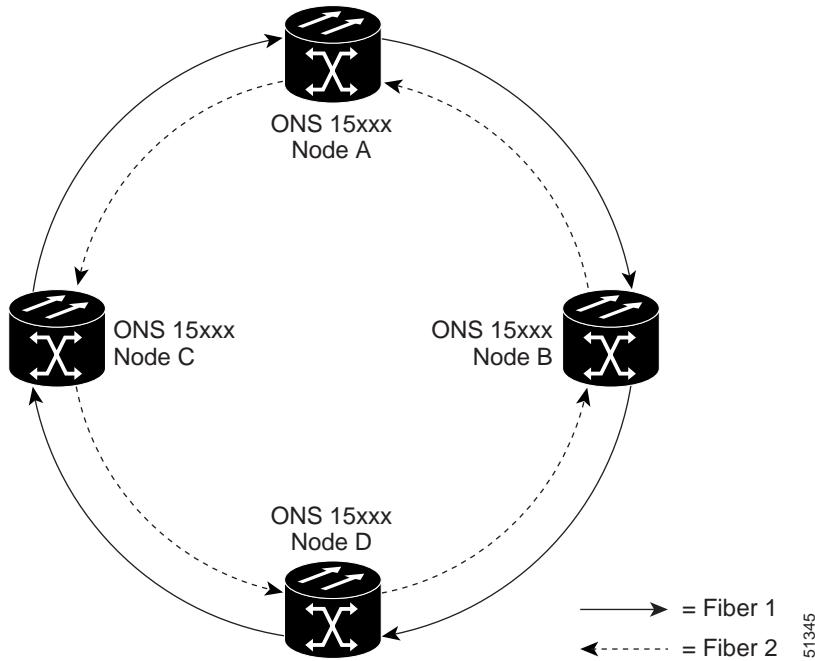

No special configuration of the physical UPSR topology is required other than connecting the fibers to the desired ports on the desired nodes. The east and west paths must exit a node at different ports (to ensure link diversity), but there are no other physical topology restrictions.

ONS 15xxx networks give you the option to set up path-protected mesh networks (PPMNs). PPMNs extend the protection scheme of a UPSR from the basic ring configuration to the meshed architecture of several interconnected rings. For more information about PPMN refer to the *Cisco ONS 15454 Procedure Guide* or the *Cisco ONS 15327 User Documentation*.

5.2 UPSR Cross-Connections

To create a UPSR cross-connection using TL1, you only need to designate whether it is a 1WAY or 2WAY cross-connect, but the access identifier (AID) must be more explicit. For example, to create a 1WAY UPSR circuit over the network with nodes A, B, C, and D and segments A-B, B-D, A-C, C-D as shown in Figure 5-1, enter the following commands:

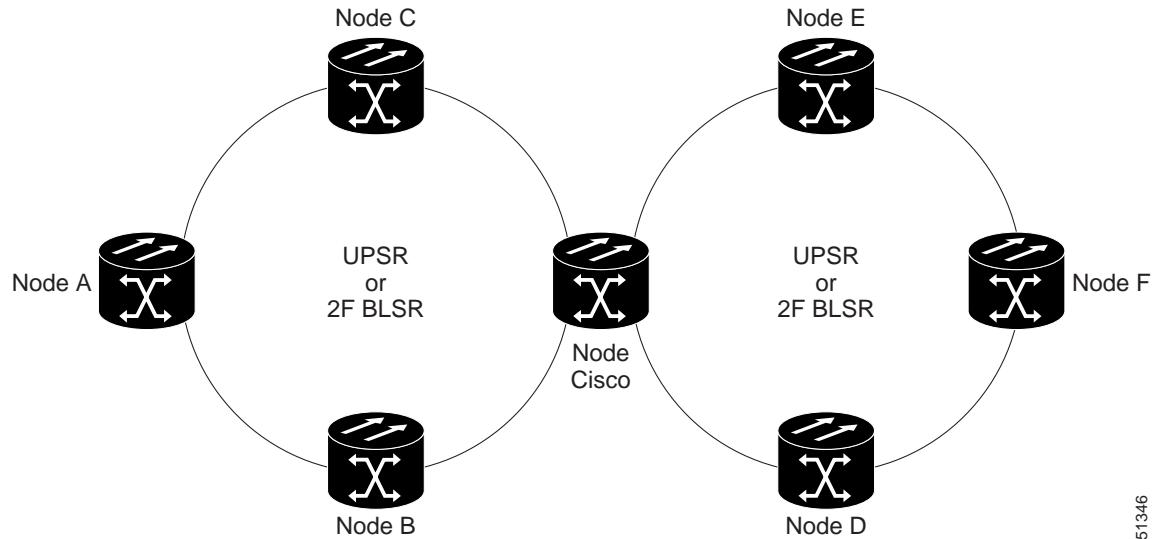

```
ENT-CRS-STS1:A:FROM,TO1&TO2:CTAG1::1WAY;  
ENT-CRS-STS1:B:FROM,TO:CTAG2::1WAY;  
ENT-CRS-STS1:C:FROM,TO:CTAG3::1WAY;  
ENT-CRS-STS1:D:FROM1&FROM2,TO:CTAG4::1WAY;
```

Figure 5-1 Network configured with a 1WAY UPSR circuit

5.3 Ring-to-Ring Interconnection

In the following examples, the form “5/1/1” represents “Slot 5, Port 1, STS 1.” For VTs add the normal VT Group and VT ID extensions. These examples also assume that the slots/ports have been auto-provisioned (via a plug-in event) and that the ports involved have been placed into the in service state using a port configuration command, for example, ED-OCN.

For the examples in this section, both rings traverse the same node; therefore, only a single cross-connection is required to create the ring-to-ring connection. Use the network map shown in Figure 5-2 with the node named “Cisco” in the nexus.

Figure 5-2 Network map with Cisco node showing ring-to-ring interconnection

5.3.1 Sample UPSR to UPSR Connection

Ring 1 = UPSR

Ring 2 = UPSR

This example, illustrated in Figure 5-3, uses a 4-port OC-3 to feed Ring 2. Ring 1 can have any OC-N trunk card, but the trunk card is most likely a single-port OC-48 or OC-12.

STS 12/3/2 maps to STS-12-8 $((3-1)*3 + 2)$.

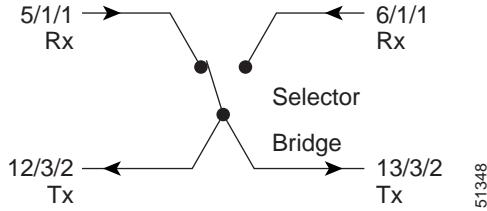

The STS calculation formula is: $((\text{Port } \# - 1)*\text{Number of STS per port}) + \text{STS}\#$.

Figure 5-3 UPSR to UPSR connection specifications through the Cisco node

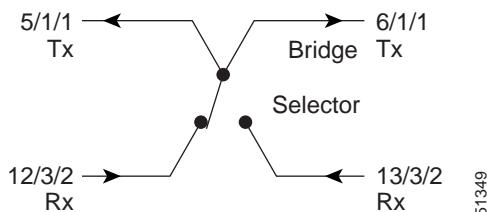

Node Cisco			
5/1/1	UPSR RING 1 West East	6/1/1	
12/3/2	West East UPSR RING 2	13/3/2	51347

Use the ENT-CRS-STS1:CISCO:STS-5-1&STS-6-1,STS-12-8&STS-13-8:CTAG1::2WAY; input format.

This command creates a selector between 5/1/1 and 6/1/1 which is bridged to Ring 2 (12/3/2 and 13/3/2), as shown in Figure 5-4.

Figure 5-4 Selector between 5/1/1 and 6/1/1

The command also creates a selector between 12/3/2 and 13/3/2 to a bridge to Ring 1 (5/1/1 and 6/1/1), as shown in Figure 5-5.

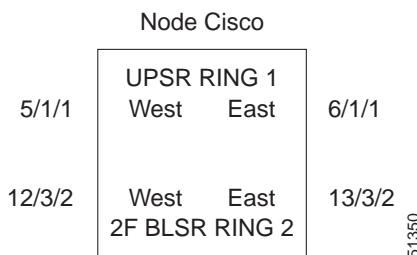

Figure 5-5 Selector between 12/3/2 and 13/3/2

5.3.2 Sample UPSR to Two-Fiber BLSR Connection

Ring 1 = UPSR

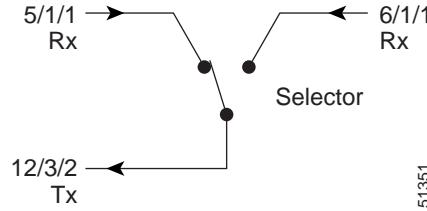

Ring 2 = Two-fiber BLSR

This example, illustrated in Figure 5-6, uses a UPSR end-point with a drop on a two-fiber BLSR and the west span of the two-fiber BLSR (Ring 2) for the active path of the circuit. The example also uses multiport addressing for Ring 2 even though a two-fiber BLSR cannot traverse OC-3 and OC-3 is the only multiport card for this release. This example is based on the future release of a multiport OC-12 that will support two-fiber BLSR. Therefore, assume a 4-port OC-12 card (this is only important for computing the STS AID for multiport cards) where $13/3/2 = \text{STS-13-26}$ and where $26 = ((3-1)*12) + 2$.

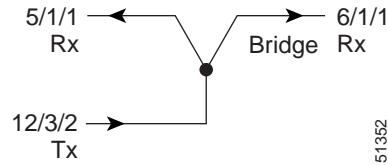

Figure 5-6 UPSR to two-fiber BLSR

Use the ENT-CRS-STS1:CISCO:STS-5-1&STS-6-1,STS12-26:CTAG2::2WAY; input format.

This command creates a selector between 5/1/1 and 6/1/1 which connects to 12/3/2 on Ring 2, as shown in Figure 5-7.

Figure 5-7 Selector between 5/1/1 and 6/1/1

The command also creates a bridge from 12/3/2 to Ring 1 (5/1/1 and 6/1/1), as shown in Figure 5-8.

Figure 5-8 Bridge from 12/3/2 to Ring 1

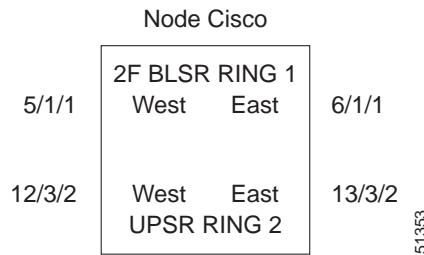

In this configuration a two-fiber BLSR switch can automatically reconnect the selector output to the protection path on the east port (12/3/2 assuming OC-12) if necessary.

5.3.3 Sample Two-Fiber BLSR to UPSR Connection

Ring 1 = Two-fiber BLSR

Ring 2 = UPSR

This example, illustrated in Figure 5-9, uses a UPSR end-point with a drop on a two-fiber BLSR and uses the east span of the two-fiber BLSR (Ring 1) for the active path of the circuit. For STS addressing, the UPSR is an OC-3 (e.g. STS-13-8).

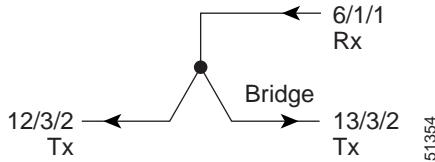

Figure 5-9 Two-fiber BLSR to UPSR

Use the ENT-CRS-STS1:CISCO:STS-6-1,STS-12-8&STS-13-8:CTAG3::2WAY; input format.

This command creates a bridge from 6/1/1 to Ring 2 (12/3/2 and 13/3/2), as shown in Figure 5-10.

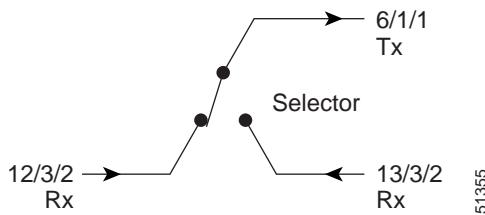

■ Ring-to-Ring Interconnection

Figure 5-10 Bridge from 6/1/1 to Ring 2

The command also creates a selector between 12/3/2 and 13/3/2 to Ring 1 (6/1/1) as shown in Figure 5-11.

Figure 5-11 Selector between 12/3/2 and 13/3/2 to Ring 1

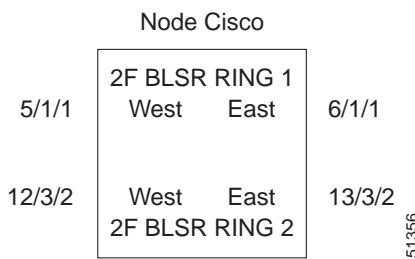

5.3.4 Sample Two-Fiber BLSR to Two-Fiber BLSR Connection

Ring 1 = Two-fiber BLSR

Ring 2 = Two-fiber BLSR

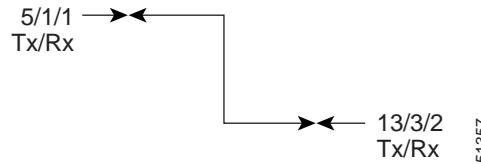

All protection for a two-fiber BLSR interconnecting to a two-fiber BLSR is performed at the line level. You can make the connection with a 2WAY cross-connect from an STS on the working side of the two-fiber BLSR span of Ring 1 to an STS on the working side of a two-fiber BLSR span on Ring 2. The connections can be east to east, east to west, west to east, and west to west. This example, illustrated in Figure 5-12, uses Ring 1 west to Ring 2 east and assumes a 4-port OC-12 in Slots 12 and 13 for subtending to a two-fiber BLSR (Ring 2).

Figure 5-12 Two-fiber BLSR to two-fiber BLSR

Use the ENT-CRS-STS1:CISCO:STS-5-1,STS-13-26:CTAG4::2WAY; input format.

This command creates a 2WAY connection from 5/1/1 to 13/3/2 as shown in Figure 5-13.

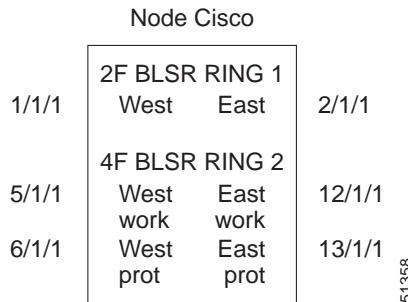

Figure 5-13 2WAY connection from 5/1/1 to 13/3/2

5.3.5 Sample Two-Fiber BLSR to Four-Fiber BLSR Connection (ONS 15454)

Ring 1 = Two-fiber BLSR

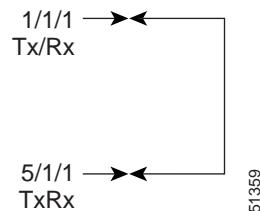

Ring 2 = Four-fiber BLSR

All protection for a two-fiber BLSR interconnecting to a four-fiber BLSR is performed at the line level. You can make the connection with a simple 2WAY cross-connection from the appropriate side, east or west, of the two-fiber BLSR to the working fiber of the appropriate side, east or west, of the four-fiber BLSR, as shown in Figure 5-14.

Figure 5-14 Two-fiber BLSR to four-fiber BLSR

Use the ENT-CRS-STS1:CISCO:STS-1-1,STS-5-1:CTAG5::2WAY; input format.

This command creates a 2WAY connection from 1/1/1 to 5/1/1, as shown in Figure 5-15.

Figure 5-15 2WAY Connection from 1/1/1 to 5/1/1

In the event of a failure, the software will automatically switch the traffic to the appropriate line and path.

5.3.6 Sample UPSR to Four-Fiber BLSR Connection (ONS 15454)

Ring 1 = UPSR

Ring 2 = Four-fiber BLSR

This example uses the west span of the four-fiber BLSR (Ring 2) for the active path of the circuit. The example also assumes that the four-fiber BLSR travels over OC-192 spans, as shown in Figure 5-16.

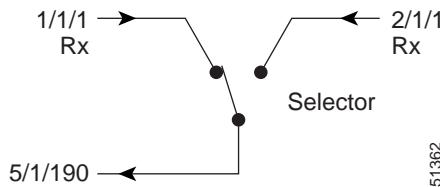

Figure 5-16 UPSR to four-fiber BLSR

Node Cisco			
1/1/1	UPSR RING 1	West	East
5/1/190	4F BLSR RING 2	West work	East work
6/1/190	West prot	East prot	2/1/1
			12/1/190
			13/1/190
			51360

Use the ENT-CRS-STS1:CISCO:STS-1-1&STS-2-1&STS-5-190:CTAG6::2WAY; input format.

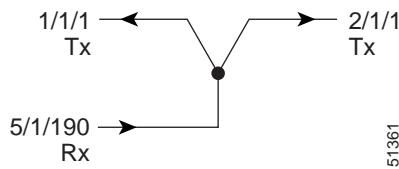

This command creates a selector between 1/1/1 and 2/1/1 to Ring 2 (5/1/190), as shown in Figure 5-17.

Figure 5-17 Selector between 1/1/1 and 2/1/1 to Ring 2 (5/1/190)

The command also creates a bridge from 5/1/190 to Ring 1 (1/1/1 and 2/1/1), as shown in Figure 5-18.

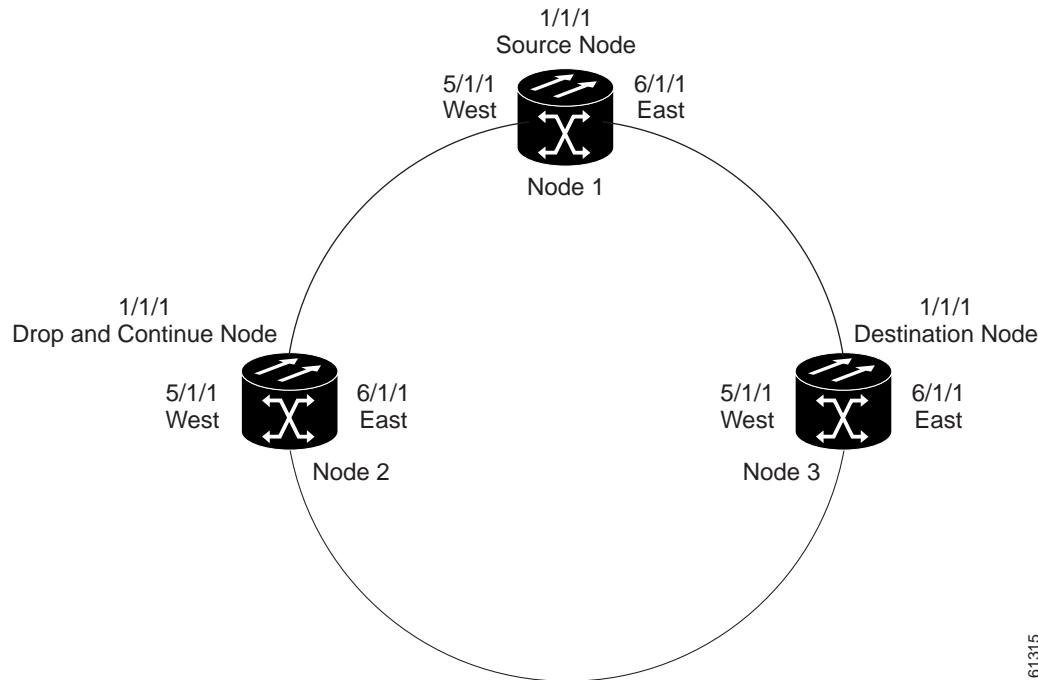

Figure 5-18 Bridge from 5/1/190 to Ring 1 (1/1/1 and 2/1/1)

5.4 1WAY Drop and Continue

The following examples show how to create a 1WAY drop and continue cross-connect. The examples use three nodes (Node 1, Node 2, and Node 3) in a ring configuration. Node 1 is the source node, Node 2 has the drop and continue, and Node 3 is the destination.

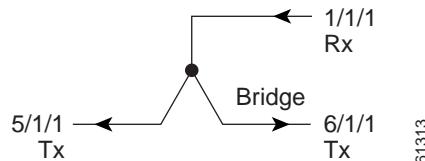

Figure 5-19 1WAY drop and continue

5.4.1 Sample Node 1 Configuration (Source Node)

Issue the ENT-CRS-STS_n::STS-1-1,STS-5-1&STS-6-1:CTAG::1WAY; command on this Node 1.

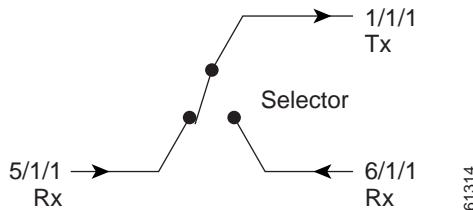

Figure 5-20 Bridge from 1/1/1 to 5/1/1 and 6/1/1

5.4.2 Sample Node 2 Configuration (Drop and Continue Node)

Issue the ENT-CRS-STSn::STS-5-1&STS-6-1,STS-1-1:CTAG::1WAYDC; on this Node 2.

Figure 5-21 Selector between 5/1/1 and 6/1/1 to 1/1/1

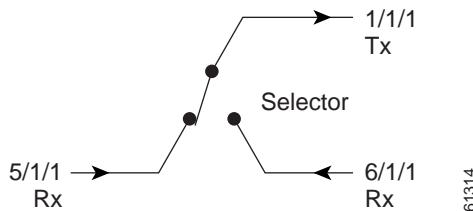

61314

5.4.3 Sample Node 3 Configuration (Destination Node)

Issue the ENT-CRS-STSn::STS-5-1&STS-6-1,STS-1-1:CTAG::1WAY; on this Node 3.

Figure 5-22 Selector between 5/1/1 and 6/1/1 to 1/1/1

TL1 Performance Monitoring

Performance information is continuously monitored and stored in individual performance monitoring (PM) registers and can be retrieved upon request or when a preset threshold is exceeded. For more detailed information on performance monitoring, refer to the *Cisco ONS 15454 Reference Guide* and the *Cisco ONS 15327 User Documentation* for more information on performance monitoring.

This chapter provides TL1 performance monitoring information for the Cisco ONS 15454 and the Cisco ONS 15327, including:

- Performance monitoring by card
- PM parameters by line type

6.1 Performance Monitoring by Card

TL1 Alarms and Errors

This chapter provides TL1 alarm and error information supported by the Cisco ONS 15454 and Cisco ONS 15327, including:

- Alarms
- Errors
- Echo

Each alarm includes a description and severity. Each error is listed by error code and includes error type and error message. For a list of TL1 conditions, see Table 4-46 on page 4-24.

7.1 Alarms

Refer to “Alarm Troubleshooting” in the *Cisco ONS 15454 Troubleshooting Guide* and in the *Cisco ONS 15327 User Documentation* for complete alarm definitions, trouble notifications, and fault recovery procedures. The alarms are listed alphabetically by alarmable object:

- AIP
- BITS
- BPLANE
- DS1
- DS3
- E1000F
- E100(T)
- EC1-12
- ENVALRM
- EQPT
- EXT-SREF
- FAN
- G1000
- NE
- NE-SREF
- OCN
- STSMON
- STSTRM
- VT-MON
- VT-TERM

For a sample of each TL1 alarm that can be generated by the ONS 15454, refer to the file 15454_r33_t11_alarms.txt on the Cisco ONS 15454 Software CD in the subdirectory \TL1. For a sample of each TL1 alarm that can be generated by the ONS 15327, refer to the file 15327_r33_t11_alarms.txt on the Cisco ONS 15327 Software CD in the subdirectory \TL1. These files can be used to test an operations support system’s ability to receive alarms which the ONS 15454/ONS 15327 can raise.

7.1.1 AIP

Auxiliary interface protection module

Table 7-1 AIP

AIP Alarm	Severity (Active)	Description
INVMACADR	MA/NSA	The ONS 15454/15327 media access control layer address (MAC address) is invalid.
MEA	CR/SA	The mismatch between entity/equipment type and provisioned attributes alarm occurs when the physical card inserted in a slot does not match the card type that is provisioned for that slot in the CTC.
MFGMEM	CR/SA	The manufacturing data memory failure alarm means that the ONS 15454/15327 cannot access the data on the erasable programmable read-only memory (EPROM).

7.1.2 BITS

Building integration timing supply (BITS) incoming references (BITS-1, BITS-2)

Table 7-2 BITS

BITS Alarm	Severity (Active)	Description
LOF	MA/SA	A port on the TCC+/MIC BITS input detects a loss of frame (LOF) on the incoming BITS timing reference signal.
LOS	MA/SA	The TCC+/MIC card has a loss of signal (LOS) condition from the BITS timing source.
SSM-FAIL	MI/NSA	Synchronization status messaging failed.

7.1.3 BPLANE

The backplane

Table 7-3 BPLANE

BPLANE Alarm	Severity (Active)	Description
MFGMEM	CR/SA	The manufacturing data memory failure alarm means that the ONS 15454/15327 cannot access the data on the erasable programmable read-only memory (EPROM).

7.1.4 DS1

A DS1 line on a DS1 or DS3XM card

Table 7-4 DS1

DS1 Alarm	Severity (Active)	Description
LOF	MA/SA	The receiving ONS 15454/15327 has lost frame delineation in the incoming data.
LOS	MA/SA	A loss of signal (LOS) at the card for either a DS-3 port or a DS-1 port.
RCVR-MISS	MA/SA	The facility termination equipment detects a missing receive cable on the DS-1 port or a possible mismatch of backplane equipment.
TRMT	MA/SA	There is a transmission failure on the DS-1 card due to an internal hardware failure.
TRMT-MISS	MA/SA	The facility termination equipment detects a missing transmit cable on the DS-1 port or a possible mismatch of backplane equipment.

7.1.5 DS3

A DS3 line

Table 7-5 DS3

DS3 Alarm	Severity (Active)	Description
LOF	CR/SA	The receiving ONS 15454/15327 has lost frame delineation in the incoming data.
LOS	CR/SA	Loss of signal at the card for either a DS-3 port or a DS-1 port.

7.1.6 E1000F

An Ethernet line on an E1000

Table 7-6 E1000F

E1000F Alarm	Severity (Active)	Description
CARLOSS	MA/SA	The Ethernet card has lost its link and is not receiving any signal, even an invalid one.

7.1.7 E100(T)

An Ethernet line on an E10 or E100

Table 7-7 E100(T)

E100T Alarm	Severity (Active)	Description
CARLOSS	MA/SA	The Ethernet card has lost its link and is not receiving any signal, even an invalid one.

7.1.8 EC1-12

An EC1 line on an EC1 card (ONS 15454 only)

Table 7-8 EC1-12

EC1-12 Alarm	Severity (Active)	Description
LOF	CR/SA	The receiving ONS 15454 has lost frame delineation in the incoming data.
LOS	CR/SA	A port on the reporting EC-1 card has a loss of signal condition. A SONET receiver detects an all-zero pattern for 10 microseconds or longer.

7.1.9 ENVALRM

An environmental alarm port on an AIC card (ONS 15454) or MIC card (ONS 15327)

Table 7-9 ENVALRM

ENVALRM Alarm	Severity (Active)	Description
EXT	MA/SA	A facility alarm is detected external to the node because an environmental alarm is present.

7.1.10 EQPT

A card in any of the card slots. This object is used for alarms that refer to the card itself and all other objects on the card including ports, lines, STS and VT.

Table 7-10 EQPT

EQPT Alarm	Severity (Active)	Description
AUTORESET	MI/NSA	The card is performing a warm reboot automatically.
BKUPMEMP	CR/NSA	A problem with the TCC+/XTC card's flash memory.
CARLOSS	MI/NSA	The Ethernet card has lost its link and is not receiving any signal, even an invalid one.
CONTBUS-A-18	MA/NSA	The main processor on the TCC+/XTC card in Slot 7/Slot 5 has lost communication with the coprocessor on the second TCC+/XTC card in Slot 11/Slot 6.
CONTBUS-A	MA/NSA	The TCC+/XTC card in Slot 7/Slot 5 has lost communication with a line card.
CONTBUS-B-18	MA/NSA	The main processor on the TCC+/XTC card in Slot 11/Slot 6 has lost communication with the coprocessor on the TCC+/XTC card in Slot 7/Slot 5.
CONTBUS-B	MA/NSA	The TCC+/XTC card in Slot 11/Slot 6 has lost communication with a line card.
CTNEQPT-PBPROT	CR/SA	A failure of the main payload between the protect cross-connect (XC/XCVT/XC10G) card in Slot 10, or the protect XTC card, and the reporting traffic card.
CTNEQPT-PBWORK	CR/SA	The main payload bus between the active cross-connect (XC/XCVT/XC10G) card in Slot 8, or the active XTC card, and the reporting traffic card.
EQPT	CR/SA	A hardware failure occurred on the reporting card.
EXCCOL	MI/NSA	There are too many collisions occurring on the network management LAN.
HITEMP	MI/NSA	The temperature of the ONS 15454/ONS 15327 is above 50 degrees Celsius.
IMPROPRMVL	CR/SA	A card was physically removed from its slot before the card was deleted in CTC.
MEA	CR/SA	The mismatch between entity/equipment type and provisioned attributes alarm occurs when the physical card inserted in a slot does not match the card type that is provisioned for that slot in the CTC.
MEM-GONE	MA/NSA	Data generated by software operations exceeds the memory capacity of the TCC+/XTC card.
MEM-LOW	MI/NSA	Data generated by software operations is close to exceeding the memory capacity of the TCC+/XTC card.

Table 7-10 EQPT (continued)

EQPT Alarm	Severity (Active)	Description
PEER-NORESPONSE	MA/NSA	The switch agent raises a Peer Card Not Responding alarm if either I/O card in a protection group does not receive a response to the peer status request message.
SFTWDOWN-FAIL	MI/NSA	The software download from the TCC+/XTC card to the ONS 15454 failed.
SNTP-HOST	MI/NSA	An ONS node serving as an IP proxy for the other ONS nodes in the ring is not forwarding SNTP information to the other ONS nodes in the network.
SWMTXMOD	CR/SA	Traffic on the reporting card is lost when this failure occurs.

7.1.11 EXT-SREF

BITS outgoing references (SYNC-BITS1, SYNC-BITS2)

Table 7-11 EXT-SREF

EXT-SREF Alarm	Severity (Active)	Description
SYNCPRI	MI/NSA	A loss of the primary timing source (reference 1).
SYNCSEC	MI/NSA	A loss of the secondary timing source (reference 2).
SYNCTHIRD	MI/NSA	A loss of the third timing source (reference 3).

7.1.12 FAN

Fan-tray assembly

Table 7-12 FAN

FAN Alarm	Severity (Active)	Description
EQPT-MISS	CR/SA	Indicates the replaceable fan tray assembly unit is missing or not fully inserted.
FAN	CR/SA	A problem with the fan-tray assembly.
MEA	CR/SA	The mismatch between entity/equipment type and provisioned attributes alarm occurs when the physical card inserted in a slot does not match the card type that is provisioned for that slot in the CTC.
MFGMEM	CR/SA	The manufacturing data memory failure alarm means that the ONS 15454/ONS 15327 cannot access the data on the erasable programmable read-only memory (EPROM).

7.1.13 G1000

An Ethernet line on a G1000 (ONS 15454 only)

Table 7-13 G1000

NE Alarm	Severity (Active)	Description
CARLOSS	MA/SA	A carrier loss on the LAN is the data equivalent of a SONET LOS alarm. The Ethernet card has lost its link and is not receiving a valid signal.
TPTFAIL	MA/SA	Indicates a break in the end-to-end Ethernet link integrity feature of the G1000-4 cards. This alarm indicates a far-end condition and not a problem with the port reporting TPTFAIL.

7.1.14 NE

The entire network element (SYSTEM)

Table 7-14 NE

NE Alarm	Severity (Active)	Description
BLSROSYNC	MA/SA	The mapping table needs updating.
DATAFLT	MI/NSA	The database exceeded the capacity of the flash memory on the TCC+/XTC.
EHIBATVG-A	MA/SA	The voltage level on battery lead A exceeds -56.7 Vdc. (ONS 15454)
EHIBATVG-B	MA/SA	The voltage level on battery lead B exceeds -56.7 Vdc. (ONS 15454)
ELWBATVG-A	MA/SA	The voltage on battery feed A is extremely low or has been lost, and power redundancy is no longer guaranteed. (ONS 15454)
ELWBATVG-B	MA/SA	The voltage on battery feed B is extremely low or has been lost, and power redundancy is no longer guaranteed. (ONS 15454)
HITEMP	CR/SA	The temperature of the ONS 15454/ONS 15327 is above 50 degrees Celsius (122 degrees Fahrenheit).
PRC-DUPID	MA/SA	Two identical node IDs exist in the same ring.
PWR-A	MA/SA	This alarm applies to the NE rack. It is raised when there is no power supplied to the main power connector or if power is connected to the backup power connector (Connector B) but not to Connector A. (ONS 15454)
PWR-B	MA/SA	This alarm applies to the NE rack. It is raised when there is no power supplied to the backup power connector or if power is connected to the main power connector (Connector A) but not to Connector B. (ONS 15454)

Table 7-14 NE

RING-MISMATCH	MA/SA	The Ring ID of the ONS 15454/ONS 15327 that is reporting the alarm does not match the Ring ID of another ONS node in the BLSR.
SYSBOOT	MA/SA	New software is booting on the TCC+/XTC card.

7.1.15 NE-SREF

Represents the timing status of the NE

Table 7-15 NE-SREF

NE-SREF Alarm	Severity (Active)	Description
FRNGSYNC	MA/SA	The reporting ONS 15454/ONS 15327 is in free run synchronization mode.
FSTSYNC	MI/NSA	A fast start synchronization. The ONS 15454/ONS 15327 is choosing a new timing reference.
HLDOVRSYNC	MA/SA	A loss of primary/secondary timing reference.
SYNCPRI	MI/NSA	A loss of the primary timing source (reference 1).
SYNCSEC	MI/NSA	A loss of the secondary timing source (reference 2).
SYNCTHIRD	MI/NSA	A loss of the third timing source (reference 3).

7.1.16 OCN

An OCN line on an OCN card

Table 7-16 OCN

OCN Alarm	Severity (Active)	Description
APSB	MI/NSA	The line terminating equipment detects protection switching byte failure in the incoming automatic protection switching (APS) signal if an inconsistent APS byte or invalid code is detected.
APSCDFLTK	MI/NSA	A BLSR is not properly configured.
APSC-IMP	MI/NSA	Invalid K bytes.
APSCINCON	MI/SA	The SONET overhead contains K1/K2 APS bytes that notify receiving equipment, such as the ONS 15454/ONS 15327, to switch the SONET signal from a working to a protect path.
APSCM	MA/SA	The ONS 15454/ONS 15327 expects a working channel but receives a protection channel.
APSCNMIS	MA/SA	The node ID contained in the K2 byte of the APS channel being received is not present in the ring map.

Table 7-16 OCN (continued)

OCN Alarm	Severity (Active)	Description
APSMM	MI/NSA	There is a mismatch of the protection switching schemes at the two ends of the span.
AUTOLSROFF	CR/SA	The OC-192 card temperature exceeds 90 degrees Centigrade. The internal equipment automatically shuts down the OC-192 laser when the card temperature rises to prevent the card from self-destructing.(ONS 15454)
AUTORESET	MI/NSA	A card performs a warm reboot automatically.
EOC	MA/NSA	The ONS 15454/ONS 15327 has lost its data communications channel (DCC).
E-W-MISMATCH	MA/SA	Nodes in a ring have an east slot/port misconnected to another east slot/port or a west slot/port misconnected to another west slot/port.
FEPRLF	MI/NSA	An automatic protection switching channel failure on a signal coming into the node.
LOF	CR/SA	A port on the reporting OC-N card has an LOF condition.
LOS	CR/SA	A port on the reporting OC-N card has a LOS condition.
SSM-FAIL	MI/NSA	Synchronization status messaging received by the ONS 15454/ONS 15327 failed

7.1.17 STSMON

STS alarm detection at the monitor point (upstream of cross-connect)

Table 7-17 STSMON

STSMON Alarm	Severity (Active)	Description
CONCAT	CR/SA	The transmitted STSc circuit is smaller than the provisioned STSc causing a mismatch of the circuit type on the concatenation facility.
FAILTOSW	MI/NSA	Fail to switch to protection.
LOP-P	CR/SA	A loss of pointer (LOP) condition at the path level.
PLM-P	CR/SA	A signal label mismatch failure (SLMF).
TIM-P	MI/NSA	The expected path trace string does not match the received path trace string.
UNEQ-P	CR/SA	The path does not have a valid sender.

7.1.18 STSTRM

STS alarm detection at termination (downstream of cross-connect)

Table 7-18 STSTRM

STSTRM Alarm	Severity (Active)	Description
LOP-P	CR/SA	A loss of pointer (LOP) condition at the path level.
PLM-P	CR/SA	A signal label mismatch failure (SLMF).
TIM-P	MI/NSA	The expected path trace string does not match the received path trace string. Path trace mode can be set to auto or manual for this alarm to occur.
UNEQ-P	CR/SA	The path does not have a valid sender.

7.1.19 VT-MON

VT1 alarm detection at the monitor point (upstream of cross-connect)

Table 7-19 VT-MON

VT-MON Alarm	Severity (Active)	Description
AUTOSW-LOP	MI/SA	Automatic UPSR protection switching took place because of an LOP alarm.
AUTOSW-UNEQ	MI/SA	Automatic UPSR protection switching took place because of an UNEQ alarm.
LOP-V	MA/SA	A loss of pointer at the VT level.
UNEQ-V	MA/SA	The node is receiving SONET path overhead with bits 5, 6 and 7 of the V5 overhead byte all set to zeroes. The failure has occurred at the VT layer.

7.1.20 VT-TERM

VT1 alarm detection at termination (downstream of cross-connect)

Table 7-20 VT-TERM

VT-TERM Alarm	Severity (Active)	Description
LOP-V	MA/SA	A loss of pointer at the VT level.
PLM-V	MI/SA	The content of the V5 byte in the SONET overhead is inconsistent or invalid.
UNEQ-V	MA/SA	The node is receiving SONET path overhead with bits 5, 6 and 7 of the V5 overhead byte all set to zeroes. The failure has occurred at the VT layer.

7.2 Errors

Errors may be generated by any command or command response message. The format of an error message is as follows:

```

SID DATE TIME
M CTAG DENY
<ERRCDE>
/* <ERRMSG> */
;
```

Table 7-21 Error Codes

Error Code (ERRCDE)	Error Type	Error Message (ERRMSG)
EANS	EQUIPAGE	Access Not Supported
EATN	EQUIPAGE	Not Valid for Access Type
EFON	EQUIPAGE	Feature Option not Provided
EN2T	EQUIPAGE	Not 2-wire Terminate and Leave
ENAC	EQUIPAGE	Not Equipped with Alarm Cutoff
ENAD	EQUIPAGE	Not Equipped with Audit Capability
ENAR	EQUIPAGE	Not Equipped with Automatic Reconfiguration
ENAT	EQUIPAGE	Request Not Valid for Access Type
ENDG	EQUIPAGE	Not Equipped with Diagnostic Capability
ENDS	EQUIPAGE	Not Equipped with Duplex Switching
ENEA	EQUIPAGE	Not Equipped with Error Analysis Capability
ENEQ	EQUIPAGE	Not Equipped
ENEX	EQUIPAGE	Not Equipped with Exercise Capability
ENFE	EQUIPAGE	Feature not Provided
ENFL	EQUIPAGE	Not Equipped for Fault Locating
ENHN	EQUIPAGE	Not Hybrid Network
ENMB	EQUIPAGE	Not Multipoint Bridge
ENMD	EQUIPAGE	Not Equipped with Memory Device
ENPM	EQUIPAGE	Not Equipped for Performance Monitoring
ENPS	EQUIPAGE	Not Equipped with Protection Switching
ENRE	EQUIPAGE	Not Recognized Equipage
ENRI	EQUIPAGE	Not Equipped for Retrieving Specified Information
ENRS	EQUIPAGE	Not Equipped for Restoration
ENSA	EQUIPAGE	Not Equipped for Scheduling Audit
ENSG	EQUIPAGE	Not Software Generic
ENSI	EQUIPAGE	Not Equipped for Setting Specified Information
ENSS	EQUIPAGE	Not Equipped with Synchronization Switching

Table 7-21 Error Codes (continued)

Error Code (ERRCDE)	Error Type	Error Message (ERRMSG)
ENTL	EQUIPAGE	Not Terminate and Leave
ERLC	EQUIPAGE	Red-Lined Circuit
ERNS	EQUIPAGE	RTU Does Not Support Command
ESPG	EQUIPAGE	Software Program
ETNS	EQUIPAGE	TSC Does Not Support Command
FNCR	FAULT	NE Failure - Circuit Restored to Last Condition - Monitor or Terminate
FNDT	FAULT	No Dial Tone Detected
FNEC	FAULT	NTE Has Lost 8-KHZ Byte Clock
FNSC	FAULT	NTE Has Lost 16-KHZ Byte Clock
FRCE	FAULT	RTU Component or Configuration Error
FRDA	FAULT	RTU Does Not Answer the Call
FREC	FAULT	RTU Eight KHZ Byte Clock Lost
FRNR	FAULT	RTU Does Not Reply
IBEX	INPUT	Block Extra
IBMS	INPUT	Block Missing
IBNC	INPUT	Block Not Consistent
ICNV	INPUT	Command Not Valid
IDMS	INPUT	Data Missing
IDNC	INPUT	Data Not Consistent
IDNV	INPUT	Data Not Valid
IDRG	INPUT	Data Range Error
IIAC	INPUT	Invalid Access Identifier (AID)
IICM	INPUT	Invalid Command
IICT	INPUT	Invalid Correlation Tag
IIDT	INPUT	Invalid Data Parameter
IIFM	INPUT	Invalid Data Format
IIPG	INPUT	Invalid Parameter Grouping
IISP	INPUT	Invalid Syntax or Punctuation
IITA	INPUT	Invalid Target Identifier
INAC	INPUT	Access Number Not Correct
INUP	INPUT	Non-Null Unimplemented Parameter
IPEX	INPUT	Parameter Extra
IPMS	INPUT	Parameter Missing
IPNC	INPUT	Parameter Not Consistent
IPNV	INPUT	Parameter Not Valid

Table 7-21 Error Codes (continued)

Error Code (ERRCDE)	Error Type	Error Message (ERRMSG)
ISCH	INPUT	Syntax Invalid Character
ISPC	INPUT	Syntax Punctuation
ITSN	INPUT	Invalid/Inactive Test Session Number
PICC	PRIVILEGE	Illegal Command Code
PIMA	PRIVILEGE	Invalid Memory Address
PIMF	PRIVILEGE	Invalid Memory File
PIUC	PRIVILEGE	Illegal Privilege Code
PLNA	PRIVILEGE	Login Not Active
RABY	RESOURCE	All Taps Busy
RALB	RESOURCE	All Units of Requested Type are Busy
RANB	RESOURCE	Access Network Busy
RCBY	RESOURCE	Circuit Busy
RCIN	RESOURCE	Requested Circuit ID Does Not Exist
RNAN	RESOURCE	Requested NE Access Number Does Not Exist
RNAU	RESOURCE	Requested NE Access Number Unassigned
RNBY	RESOURCE	NE is Busy
RRCP	RESOURCE	Unit Specified by Routing Code Busy
RRNG	RESOURCE	Requested Changes Exceeds Range
RTBY	RESOURCE	Requested Tap Busy
RTEP	RESOURCE	Requested Tab Does Not Exist
RTUB	RESOURCE	Test Unit Busy
SAAL	STATUS	Already Allowed
SAAS	STATUS	Already Assigned
SABT	STATUS	Aborted
SACS	STATUS	Access Unit Cannot Sync on Facility Signal
SADC	STATUS	Already Disconnected
SADS	STATUS	Access Unit in Diagnostic State
SAIN	STATUS	Already Inhibited
SAIS	STATUS	Already In-Service
SAMS	STATUS	Already in Maintenance State
SAOP	STATUS	Already Operated
SAOS	STATUS	Already Out-of-Service
SAPP	STATUS	Access Path Continuity Check Failed
SAPR	STATUS	Already in Protection State
SARB	STATUS	All Resources Busy

Table 7-21 Error Codes (continued)

Error Code (ERRCDE)	Error Type	Error Message (ERRMSG)
SATF	STATUS	Automatic Test Failed
SCAT	STATUS	Circuit is Already Connected to Another Tap
SCBS	STATUS	Channel Busy
SCIS	STATUS	Circuit in Split Condition
SCNA	STATUS	Command Not Able to be Aborted
SCNF	STATUS	Command Not Found
SCNS	STATUS	Circuit Not in Split Condition
SCOS	STATUS	Channel Out-of-Service
SCSD	STATUS	Can't Split DS0B Circuit
SCSN	STATUS	Invalid Command Sequence
SDAS	STATUS	Diagnosis Already Started
SDBE	STATUS	Internal Data Base Error
SDFA	STATUS	Duplex Unit Failed
SDLG	STATUS	Duplex Unit Locked
SDNA	STATUS	Dumple Unit Not Available
SDNC	STATUS	Input Data is Not Consistent With NE Data
SDNR	STATUS	Data Not Ready
SDNS	STATUS	Diagnosis Not Started Yet
SEOS	STATUS	NTE is Out-of-Service
SFAS	STATUS	Fault Locating Already Started
SFNS	STATUS	Fault Locating Not Started yet
SFYA	STATUS	Facility Reports Amber Alarm
SLNS	STATUS	Log Not Started Yet
SLOS	STATUS	TSC to RTU Link Out-of-Service
SNCC	STATUS	Not Cross-Connected
SNCN	STATUS	NTE Unable to Execute Command
SNDS	STATUS	NTE is in a Diagnostic State
SNIM	STATUS	NTE Access Complete, Circuit was in Monitor State
SNIS	STATUS	Not in Service
SNML	STATUS	No Monitor Line Established
SNNB	STATUS	NTE Could Not Sync on DS0B Signal
SNNS	STATUS	NTE Could Not Sync on DS-1 Signal
SNOS	STATUS	NTE is Out-of-Service
SNPR	STATUS	Not in Protection State
SNRM	STATUS	System Not in Restoration Mode

Table 7-21 Error Codes (continued)

Error Code (ERRCDE)	Error Type	Error Message (ERRMSG)
SNRS	STATUS	Not Reserved
SNSR	STATUS	No Switch Request Outstanding
SNVS	STATUS	Not in Valid State
SNYA	STATUS	NTE has Detected an Amber Alarm
SOSE	STATUS	Operating System Error
SOST	STATUS	Out-of-Service, Testing
SPFA	STATUS	Protection Unit Failed
SPLD	STATUS	Protection Unit Locked
SPNA	STATUS	Process Not Able to be Aborted
SPNF	STATUS	Process Not Found
SRAC	STATUS	Requested Access Configuration is Invalid
SRAN	STATUS	Unable to Release Access System
SRCI	STATUS	Requested Command(s) Inhibited
SRCN	STATUS	Requested Condition Already Exists
SROF	STATUS	Requested Operation Failed
SROS	STATUS	Required RTU Out of Service
SRQN	STATUS	Invalid Request
SRTN	STATUS	Unable to Release Tap
SRTO	STATUS	Reply Timeout Occurred
SSCE	STATUS	Systemic (SNIDER) Communications Error
SSNG	STATUS	Subrate Selected is Incorrect
SSNP	STATUS	Speed Selected is Incorrect
SSNQ	STATUS	Test Signal Not QRS
SSRD	STATUS	Switch Request Denied
SSRE	STATUS	System Resources Exceeded
STAB	STATUS	Test Aborted
STLC	STATUS	Tap Unable to Locate Channel
STNO	STATUS	TSC/RTU to TAU Link Out of service
STOS	STATUS	Test Access Unit Out of Service
STTI	STATUS	Tap Idle
SWFA	STATUS	Working Unit Failed
SWLD	STATUS	Working Unit Locked

7.3 Echo

In order to improve telnet functionality for automated systems, the echo function has been turned off since ONS 15454 Release 3.0. This change is transparent to users running standard UNIX-compliant telnet clients; however, PC users may need to change their client setup to enable “local echo.” This is normally accomplished by a pull-down menu or a preference attribute.

To test the local echo on your PC client, use the RTRV-HDR command. If you receive a response but no data, set local echo ON. Cisco recommends that you close any windows containing sensitive information after exiting a TL1 session.
