Tech Note: Configuring H.323 IP trunk between Cisco Call Manager and Avaya S8700/G600

Introduction

The objective of this document is to provide the Cisco field engineers or Cisco partners with exact steps to configure H.323 IP trunks between the Cisco Call Manager and the Avaya S8700/G600. This is particularly important for situations where interoperability is required. It is recommended to use the Avaya Site Administration (ASA) tool for configuration tasks on the Avaya S8700/G600. This interoperability document is intended for external use as well. There is no Cisco Confidential information within this document.

Procedure on Avaya S8700/G600

1. The first step is to check whether the Avaya system is capable of supporting IP trunks. Unlike the Cisco Call Manager, this is a licensed feature. This can be obtained by running the "*display system-parameters customer*" command from the ASA tool. The screenshot on the next page shows the output captured from our lab setup.

splay system-parameters custo 💌 send (return) 📔 help (15) 🛛 cancel (esc) 🖉 enter (13	1) sche	edule (f9)	next (f7)	previous (f8)

Maximum G700 VAL Sources:	10	0		
(NOTE: You must logoff & login to effect the pe	rmissi	lon chan	iges.)	

2. The next step is to configure a trunk group. Type "*add trunk-group #*" where # is the desired trunk group.

change trunk-group 1 🔄 send (return) help (15) cancel (esc) enter (13) schedule (19) next (17) previous (18)

Disconnect Supervision - In? U Out? n Answer Supervision Timeout: 0

3. Then add the IP address of the remote end (which in this case is the Call Manager) by typing the "*change node-names ip*" command. Create a signaling group, specify the remote end and then associate it with the trunk group previously created.

change sig	naling-group 1	0	send (return)	help (f5)	cancel (esc)	enter (f3)	schedule (f9)	next (f7)	previous (f8)
1 2	3 4	5

4. Now that the trunk and signaling groups have been successfully created, the next step is to take care of the routing patterns. In this lab setup, the Avaya IP phones are in the extension range 2XXX while the Call Manager IP phones are in the extension range 4XXX. So we need to create a dialplan to route to 4XXX from the Avaya system. For the purposes of our lab setup, we are inserting digits 443 while dialing the 4 digit extension and then stripping them out (Note: This is not necessary. You can also have a simple setup which does not require any digit manipulation). Check the uniform dial plan table by typing "change uniform #" where # is the matching pattern.

change uniform-dia	alplan 4	💌 send (r	eturn)	nelp (f5)	cancel (esc)	enter (f3)	schedule (f9) next (f7)	previous (f8)	1
1 2										
		UN	LFORM DI	AL PLA	N TABLE		Pero	cent Full	: 0	
Matching		Insert		Node	Matching	3	Insert		Node	
Pattern	Len D	l Digits	Net Con	v Num	Pattern	Len Del	Digits	Net Conv	Num	
4	4	6 443	aar n			+ $+$ $+$				
<u>/</u>	4		aar n	H		4 H H				
						4 4 4				
-	H	$H \vdash $		H		4 H H	H		H	
	H					4 8 8				
	3									

5. Now check the corresponding AAR table . The AAR table can be checked by typing "*change aar analysis #*" where # is the matching pattern.

change aar analysis 4	send (return)	help (f5)	cancel (esc)	enter (f3)	schedule (f9)	ne
1 2		AD DIGIT				
	н	HK DIGII	HMHLA212 1H	BLE	Percent	Fu
Diale Strin	d Tot q Min	al Ro Max Pat	ute Call tern Type	Node Num	ANI Reqd	
4	4	4 1				
5		4 3	pubu			
50 5050	4	4 31 4 30	aar aar			
6	7	7 4 10	19 aar 1 aar			
8		7 99	9 aar			
9		7 99	<u>19 aar</u>		n n	
		\square			n	

6. Finally check the corresponding route pattern. In the example above, the route pattern that corresponds to dialed string 4, is Route pattern #1. Type "*change route-pattern* #"

change route-pattern 1 📃 👱	send (return)	elp (f5) cancel (esc)	enter (f3) schedule (l	9) next (f7)	previous (f8)

Procedure on Call Manager

1. In Cisco Call Manager, specify the Avaya's CLAN addresses as H.323 devices (Click on Device -∠ Add a new Device ∠ Gateway)

2. Next, add the CLAN addresses to a route group, and associate the route group to a route list

Route/Hunt	List Configura	ation	<u>Add a new Route/Hunt List</u> <u>Back to Find/List Route/Hunt Lists</u> <u>Dependency Records</u>
Route/Hunt List Details	Route/Hunt List: \$870	10 Avaya Xeta

Features Tested

The following are the lists of features tested between the Cisco Call Manager 4.0 and Avaya S8700/G600 Communication Manager 1.3:

Name and Number Display (Bi-directional)

Call Transfer

Conference Call between the two systems

Call Park
