Introduction

This is an Application Note for the connectivity of Lucent/Avaya Definity G3 Version 10 PBX and Octel 200 Voice Mail Server with Cisco Unified CallManager using a Cisco 3640-T1 QSIG interface as the MGCP Gateway.

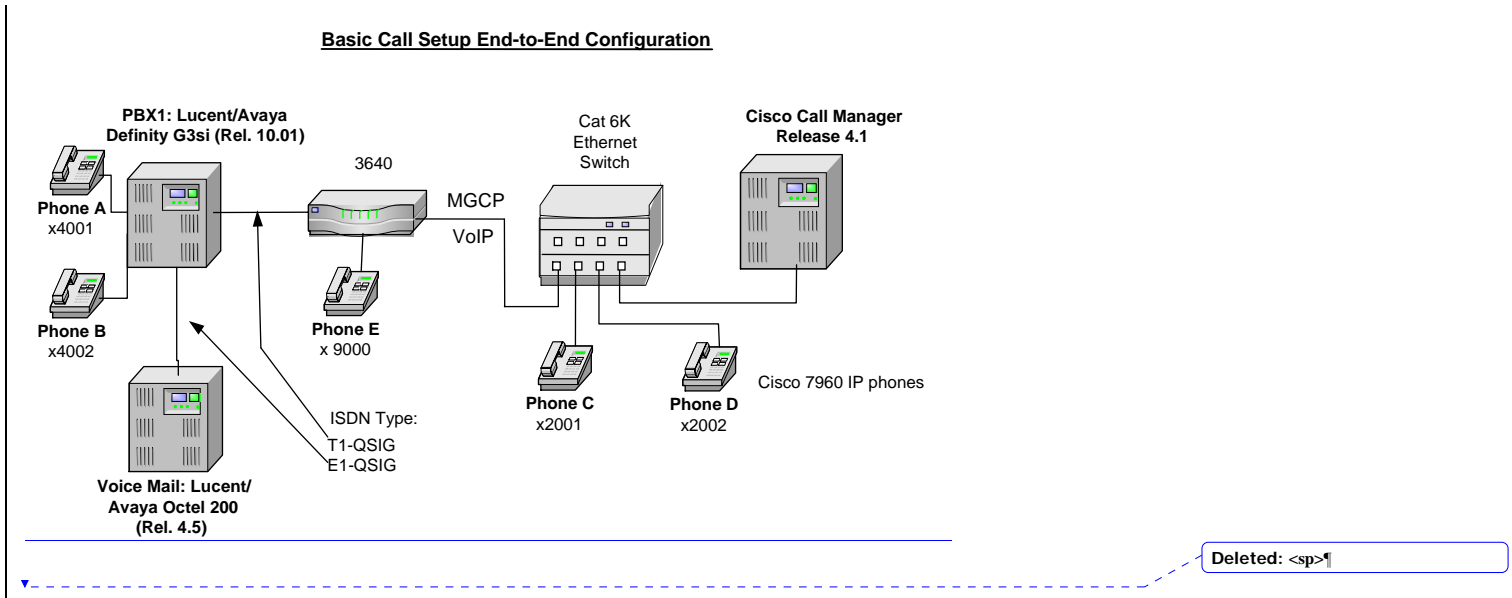

The Network Topology diagram shows the test set-up for end-to-end interoperability between the Cisco Unified CallManager connected to the PBX via Cisco 3640-T1 link as the MGCP Gateway.

Connectivity is achieved by using the industry standard ISO QSIG protocol. The Lucent/Avaya Definity G3si can be configured as either Peer-master or Peer-slave.

Network Topology

Figure 1. Basic Call Setup

Limitations

QSIG Message Waiting Indicator

- Current software for the Definity PBX that uses Leave Word Calling (LWC) is not translated into QSIG MWI Activate and Deactivate commands. Therefore, the only way to get MWI to work with the Cisco Call Manager is if the Octel is integrated with the Definity via QSIG. It cannot be integrated via analog, digital or port emulation.
- While the Avaya Communications Manager documentation does not show the same limitations as previous versions, it has not been verified if it can convert LWC into QSIG MWI Activate and Deactivate commands.

System Components

Hardware Requirements

Cisco Hardware

- Cisco 3640 Gateway with 2MFT T1 Port
- Cisco Cat6K switch
- Cisco Unified CallManager 4.1

PBX Hardware including interface card

- Lucent/Avaya Definity G3si V10 PBX.
- Hardware: TN464F, DS1 INTFC 24/32
- Avaya Octel 200 V4.5 Voice Mail Server
- Hardware: DTICE E1 QSIG Interface

Software Requirements

Cisco IOS software release 12.3

PBX Software Version 10.0.

Octel Software Version 4.5

Cisco Unified CallManager 4.1

Features

Calling/Called Number

Calling Name

Connected Name

Message Waiting Indicator (MWI) Activation and Deactivation

Forward into Voice Mail

Divert out of Voice Mail

Configuration

Configuring the Lucent/Avaya Definity G3si PBX

Configure in the following sequence:

Add the new circuit pack.

Add the new signaling group.

Add the new trunk group.

Add Uniform Dialing Plan.

Avaya Trunk Connected to the Octel VM System

DS1 Interface

V10 GEDI

send (return) help (F5) cancel (esc) enter (F3) schedule (F8) next (F7) previous (F8) next form (F6)

Octel 200 Configuration

Note: The Octel is configured as it would be in a normal networked environment. All routing between the Octel and Call Manager is handled by the Avaya 'transit' PBX. Care should be taken to make sure call routing is correct in the Avaya 'transit' PBX.
