## Introduction

- This is an application note for connectivity of Avaya Definity G3 MV1.3 PBX with Cisco Unified CallManager Release 4.2 using Cisco WS-X6608-T1 QSIG as MGCP gateway.
- The network topology diagram (Figure 1) shows the test setup for end-to-end interoperability with the Cisco CallManager connected to the PBX via WS-X6608-T1 QSIG link as MGCP gateway.
- Connectivity is achieved by using the PRI ISO QSIG T1 protocol type on the MGCP gateway and ISO QSIG switch type on the Avaya Definity G3 MV1.3 PBX.
- This Application Note uses the WS-X6608-T1 voice gateway, however other Cisco MGCP-controlled voice gateways are also an option to use since CallManager QSIG implementation does not depend on the physical interface.

## Network Topology

Figure 1. Network topology of test setup

## Limitations

- As of this round of testing, the Avaya Call Diversion by Reroute cannot be disabled. Thus, when testing Call Forwarding (Unconditional, Busy or No Reply) by Join or Path replacement for forwarded calls (Unconditional, Busy or No Reply) over a QSIG network, the Avaya automatically performs a Call Diversion by reroute method to obtain the best route. Path replacement method was properly executed on an established call after a Call Transfer.
- For Path Replacement on tromboned calls to work, the destination local station on the Avaya (2XXX) must be listed in the isdn public-unknown page. The numbering format for calling and called number must be set to UNKNOWN.

## System Components

### Hardware Requirements

The following hardware is required:

- Cisco Catalyst 6500 switch
- Cisco WS-X6608-T1 Module
- Cisco Unified CallManager 4.2 MCS Server
- Avaya TN464F, DS1 INTFC 24/32 circuit pack

### Software Requirements

The following software is required:

- Cisco Unified CallManager Release 4.2
- Avaya MV1.3
- CatOS 7.6(8)

## Features

This section lists new and changed features and features that are not supported.

### Features Supported

- CLIP-Calling Line (Number) Identification Presentation
- CLIR-Calling Line (Number) Identification Restriction
- CNIP-Calling Name Identification Presentation
- CNIR-Calling Name Identification Restriction
- COLP-Connected Line (Number) Identification Presentation
- COLR- Connected Line (Number) Identification Restriction
- CONP-Connected Name Identification Presentation
- CONR- Connected Name Identification Restriction
- Alerting Name
- CT-Call Transfer (by join)
- CFU-Call Forwarding Unconditional (by Reroute)
- CFB-Call Forwarding Busy (by Reroute)
- CFNR-Call Forwarding No Reply (by Reroute)
- CCBS-Call Completion to Busy Subscriber
- CCNR-Call Completion No Reply
- ANF-PR-Additional Network Feature Path Replacement (for Call Transfer by join)
- ANF-PR-Additional Network Feature Path Replacement (for Call Diversion by forward switching)
- ANF-PR-Additional Network Feature Path Replacement (for Trombone connection)
- MWI- Message Waiting Indication (lamp ON, lamp OFF)Configuration

### Features Not Supported

- CFU-Call Forwarding Unconditional (by join)
- CFB-Call Forwarding Busy (by join)
- CFNR-Call Forwarding No Reply (by join)

## Configuration

This section contains configuration menus and commands and describes configuration sequences and tasks.

## Configuring the Avaya Definity G3si MV1.3 PBX

Configure in the following sequence:

1. Add the new circuit pack.
2. Add the new signaling group.
3. Add the new trunk group.
4. Add Uniform Dialing Plan.

### Configuration Menus and Commands

#### Software Version

```
list configuration software-versions Page 1
