## Introduction

This is an application note for connectivity of NEC IPX2400 Release 15 PBX with Cisco Unified CallManager Release 5.0 via Cisco Communication Media Module CMM-E1 as MGCP gateway using ECMA QSIG protocol.

The network topology diagram (Figure 1) shows the test setup for end-to-end interoperability with the Cisco Unified CallManager connected to the PBX via Communication Media Module CMM-E1 link as MGCP gateway. Connectivity is achieved by using the PRI QSIG E1 protocol type on the MGCP gateway with CallManager Service parameter QSIG variant of ECMA and ECMA switch type on the NEC IPX2400

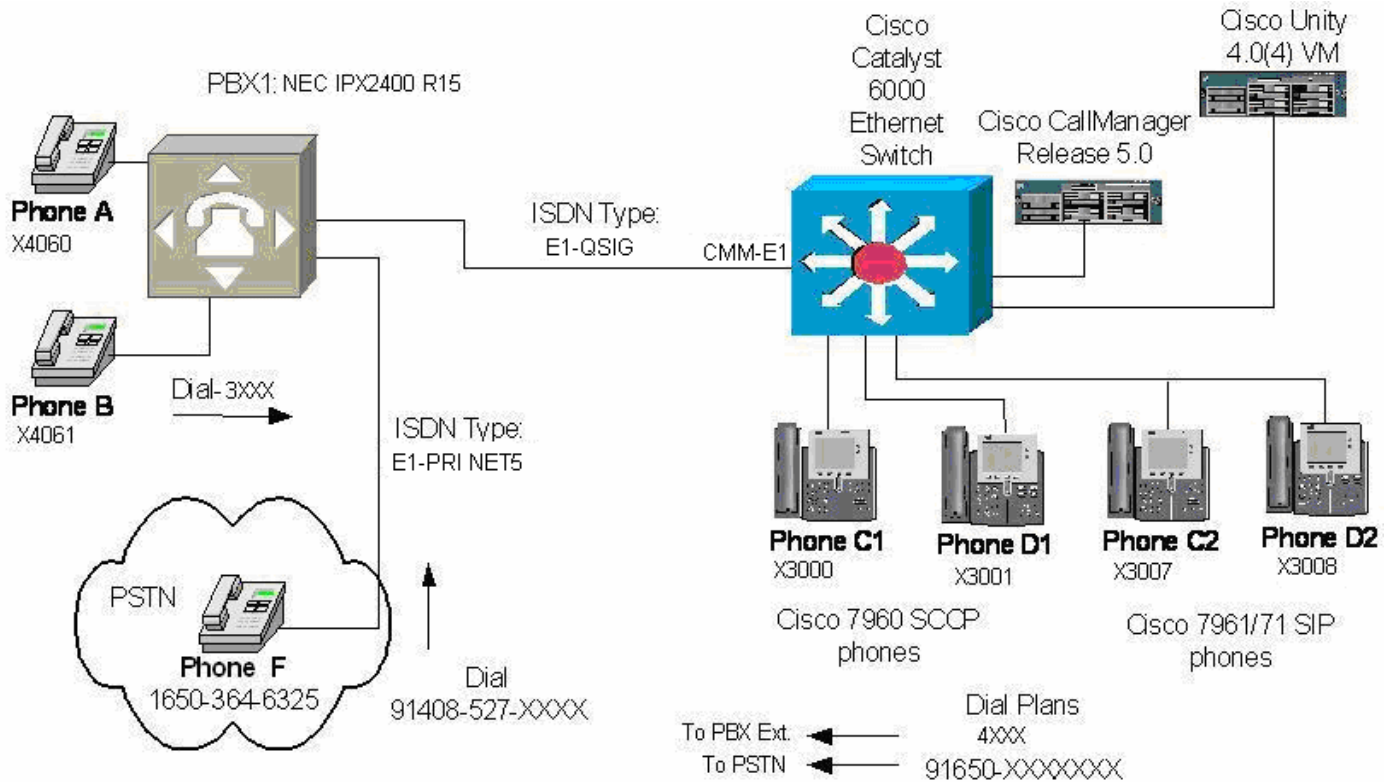

This Application Note uses the Communication Media Module CMM-E1 voice gateway, however other Cisco voice gateways are also an option to use since CallManager QSIG implementation does not depend on the physical interface.

**Important Notice:** The testing conducted on the NEC E1 QSIG configuration was done using the NEC North American Release 15 software. At this time, Cisco does not have the NEC European release and could not be used for testing. Integrating CCM 5.0 using E1 with a NEC IPX2400 Euro switch may cause different results from the results stated in this document.

## Network Topology

Figure 1. Network Topology

## Limitations

Call Transfer by join (Consultation local Transfer), Cisco IP Phone x3000 calling to Dterm phone x4060 that is Transferred to Dterm phone x4061. Cisco IP phone x3000 display shows unknown/unknown. NEC IPX2400 sends "CallTrasferComplete" connected name and number restricted towards CallManager.

Call Transfer by join (Consultation network/external Transfer), Cisco IP Phone x3000 calling to Dterm phone x4060 that is Transferred to Cisco IP phone x3001. Cisco IP phones x3000 and x3001 display unknown/unknown (SCCP IP phone) and Anonymous (SIP IP phone), respectively. NEC IPX2400 sends "CallTrasferComplete" connected name and number restricted towards CallManager.

Call Transfer by join (Blind network/external Transfer), Cisco IP Phone x3000 calling to Dterm phone x4060 that is Transferred to Cisco IP phone x3001. Cisco IP phone x3001 display shows Anonymous (SIP IP phone). NEC IPX2400 sends "CallTransferComplete" calling Name and number restricted towards CallManager. This limitation is fixed when SS-Path Replacement is activated.

Call Forward by join (local), Cisco IP Phone x3000 calling to Dterm phone x4060 that is forwarded to Dterm phone x4061. Cisco IP phone display shows "4060" as connected number when the call is complete.

Call Forward by Reroute, Dterm phone x4060 calling Cisco IP phone x3000 that is forwarded to Dterm phone x4061. Reroute is initiated by CallManager side and NEC PBX does not honor request.

Call back, Busy or NR, was invoked from Dterm phone x4060 to Cisco IP phone, the original calling name is not shown on the Cisco IP phone x3000. NEC PBX does not send Calling Name on a locally originated CallBack call.

NEC PBX could not restrict Calling Name, however, NEC has an option to turn off/remove name display delivery, in ASYD command (system wide) or remove name from individual stations using ANDD command, or block Name display at a trunk level using ARTD command.

## System Components

### Hardware Requirements

#### Cisco Hardware

Cisco Unified CallManager Server  
Catalyst 6500  
WS-SVC-CMM-6E1, Communications Media Module

#### NEC IPX2400

Circuit card PA-30PRTC

### Software Requirements

Cisco Unified CallManager: 5.0  
NEC IIPX2400 Release 15  
Cisco IOS Release or 12.3 or higher

## Features

### Features Supported

CLIP-Calling Line (Number) Identification Presentation  
CLIR-Calling Line (Number) Identification Restriction  
CNIP-Calling Name Identification Presentation  
COLP-Connected Line (Number) Identification Presentation  
CONP-Connected Name Identification Presentation  
Send Alerting Name  
Call Back/Call Completion  
CT-Call Transfer (by join)  
CFU-Call Forwarding Unconditional  
CFB-Call Forwarding Busy  
CFNR-Call Forwarding No Reply  
Call Forward by Reroute  
ANF-PR-Additional Network Feature Path Replacement (for Call Transfer by join)  
ANF-PR-Additional Network Feature Path Replacement (for Trombone connection)

### Features Not Supported

CONR- Connected Name Identification Restriction – (NEC IPX2400 could not change connected name to restricted).  
COLR- Connected Line (Number) Identification Restriction – (NEC IPX2400 could not change connected number to restricted).  
Q.SIG MWI- Message Waiting Indication (lamp ON, lamp OFF), the current NEC IPX2400 North American Release 15 software does not support QSIG-MWI.  
Overlap sending and overlap receiving are not supported on the current NEC IPX2400 North American Release 15 software.  
ANF-PR-Additional Network Feature Path Replacement (for Call Forward by join), the current NEC IPX2400 North American Release 15 software does not support Path Replacement on Call Forward by join.

## Configuration

**Important Notice:** It is important that the engineer/technician modifying the IPX2400 configuration be well versed in the NEC MAT command line. The NEC MAT command line is very precise and should only be changed by a person who is certified by NEC and has the in-depth knowledge on how to troubleshoot the system in case erratic behavior results.

### Configuring the NEC2400 IPX PBX

Configure the PBX in the following sequence:

Physical Layer Set-up:

SW Mode→SW15→SW16

Note: You must set the switches on the PA-30PRTC appropriately for QSIG operation.

Enable QSIG services:

ASYD→ASFC

To build the QSIG route:

ARTD→ARTI→ATRK→ARSC→ARRC→ADPC→ACSC→ACIC1→ACIC2→MBRT

To build the dial plan to access the QSIG route (Assumes dummy route has been built and ARRC is assigned properly):

ANPD→ASPA→AMND→AFRS→AOPR→ARNP

### Configuration Menus and Commands

#### Physical Layer Set-up:

##### SW Mode

Set to 10 (A in HEX)

##### SW15

Set switch 6 to 'off' (Sets CRC4 control active)

##### SW16

Set switch 4 to 'off' (This switch determines the L2/L3 ISDN protocol side emulation for the route Off=Network/On=User)

Note: To set other physical layer parameters such as interface impedance (75 or 120ohms), alarm monitoring and Loss Pad settings please refer to the NEC CIRCUIT CARD GUIDE for the PA-30PRTC. These parameters are not covered in this document. The value of these parameters will depend upon the installation of each individual Telephony network.

#### Enable QSIG services

##### ASYD

System 1, Index 186, bit 6 = 1 (ISDN service enabled)

System 1, Index 375, bit 0 = 1 (avoid Bch lockup)

##### ASFC

SFI 94 set to '0' (ANI)

## Build QSIG Route

### ARTD

Note: You must build two ARTD forms, one for the b-channels and one for the d-channel

RT 17 (B-Channels)

DVRST    0      SPMET     0      PR        1
```

Note: The following parameters determine the state of the following QSIG-SS features: CTCF-Call forward/Call transfer, RERT-CF Reroute, PR-Path Replacement. To set the feature enabled you must set it to '1', if you want the feature disabled change the setting to '0'. Parameter INTD determines what flavor of QSIG is to be used (INTD=1 is ISO, INTD=0 is ECMA)

1	4061	Landon Donovan

**ASFC SFI 94** (used to restrict Calling Number)

```

* Service Feature Restriction Class List *
Starting                               Ending
Tenant 1                               Tenant 1
SFI 94                                 SFI 94

SFC Attribute Settings
Tenant Mode SFI 0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15
1 Day 94 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1
  
```

Note: To restrict 'Calling Number' you assign SFC =15 (or any SFC set to '1'), under ASDT command for the Dterm station you want to restrict.

**Call Back**

**ASYD**

**ASYD** - System Data 1, Index 139. No Answer Timer for CALL BACK. Assign 00H. (RAM Data is 3FH = 30 seconds.)

System Data 1, Index 68, Bit 0. 0/1: SHF and Access Code/last digit of Telephone Number + Access Code.

System Data 2, Index 0, Bit 0. Is CALL BACK enabled on a per Tenant basis? 0/1: No/Yes.

System Data 2, Index 4, Bit 0. CALL BACK and OUTGOING TRUNK QUEUING [O-2] Access Codes are same or separate? 0/1: Separate/Same.

**ASFC**

SFI 2 allows/restricts CallBack feature.

<b>* Service Feature Restriction Class List *</b>																		
Starting									Ending									
Tenant 1 SFI 2									Tenant 1 SFI 2									
SFC Attribute Settings																		
Tenant	Mode	SFI	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
1	Day	2	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

Note: On each Dterm station Assign a SFC that has SFI=2 set to '1', using a SFC with SFI=2 set to '0' restricts CallBack.

ADSL (Assigning CallBack feature on Dterm softkey)

* Dterm Soft Key on LCD Data in LDM List *

## Acronyms

<b>Acronym</b>	<b>Definitions</b>
ANF-PR	Additional Network Feature Path Replacement
AOC	Advice-of-charge. Information element is sent with the connection setup information for incoming Euro-ISDN connections. The AOC IE is used for call charge calculation.
CCM	Cisco Unified CallManager
CCBS	Call Completion to Busy Subscriber
CCNR	Call Completion on No Reply
CFB	Call Forwarding on Busy
CFNR	Call Forwarding No Reply
CFU	Call Forwarding Unconditional
CLIP	Calling Line (Number) Identification Presentation
CLIR	Calling Line (Number) Identification Restriction
CMM	Communication Media Module (CMM) is a Cisco Catalyst® 6500 Series and Cisco 7600 Series line card that provides flexible and high-density T1/E1 gateways
CNIP	Calling Name Identification Presentation
CNIR	Calling Name Identification Restriction
COLP	Connected Line (Number) Identification Presentation
COLR	Connected Line (Number) Identification Restriction
CONP	Connected Name Identification Presentation
CONR	Connected Name Identification Restriction
CT	Call Transfer
MWI	Message Waiting Indicator
PSTN	Public Switched Telephone Network
